## SAFETY CHECK-OUT

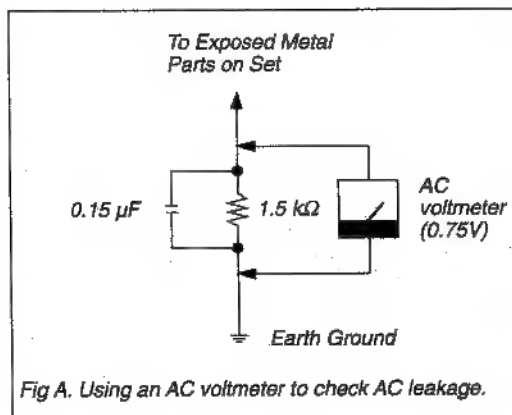

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

### LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable.  
(See Fig. A)

Die Sony Corporation untersagt ausdrücklich die Vervielfältigung jeglicher Teile dieser Anleitung oder den Gebrauch derselben für irgendeinen anderen Zweck als die Bedienung oder Wartung der in dieser Anleitung beschriebenen Ausrüstung ohne ausdrückliche schriftliche Erlaubnis der Sony Corporation.

# MANUAL STRUCTURE

## Purpose of this manual

This manual is the Service Manual of the Edit Station ES-7 and the following option boards.

Basic DME switcher board	: ESBK-7021
3D effect board for basic DME switcher	: ESBK-7022
Advanced DME switcher board	: ESBK-7023
3D effect board for advanced DME switcher	: ESBK-7024
External switcher interface board	: ESBK-7025
QSDI interface board	: ESBK-7031
SDI interface board	: ESBK-7032
Disk recorder board	: ESBK-7041
SCSI option	: ESBK-7051
Ethernet option	: ESBK-7052
ES Draw	: ESBK-7071

This manual describes the servicing information for blocks and boards replacements of the equipment.

## Contents

The sections covered in the manual are summarized below to give you a general understanding of the manual.

### Section 1 OPERATING INSTRUCTIONS

Describes and the contents of the operating instructions related to the operations.

### Section 2 SERVICE OVERVIEW

Describes the external cabinet removal procedures during servicing, location of the main parts, board removal procedures, switch setting, notes and so on.

### Section 3 DIAGNOSTICS FUNCTION

Describes the information related to when the system experiences a problem.

### Section 4 ELECTRICAL ALIGNMENTS

Describes the electrical adjustments of each board.

### Section 5 BLOCK DIAGRAMS

Illustrates the block diagrams which show each board function and signal flow, and describes outlines of the circuits.

### Section 6 FRAME DIAGRAMS & BOARD LAYOUTS

Shows the schematic diagram and board layouts of the following boards.  
FP-74 board, LE-154 board, MB-639 board, CN-1237/1238/1242 board.

### Section 7 SPARE PARTS & OPTIONAL FIXTURES

Describes the blocks, boards and mechanical parts.

## Related Manuals

In addition to this Service Manual, the following operating instructions and manuals are provided.

- **Service Manual (Not supplied with each equipment)**

Part No. 9-977-662-01 <ESBK-7011>

Part No. 9-977-663-01 <ESBK-7045>

Describes the servicing information for blocks and boards replacements of the equipment.

- **Factory Service Manual (Not supplied with each equipment)**

Part No. 9-977-661-01 <ES-7/ESBK-7021/ESBK-7022/ESBK-7023/ESBK-7024/

ESBK-7025/ESBK-7031/ESBK-7032/ESBK-7041/

ESBK-7051/ESBK-7052/ESBK-7071>

Describes the information (block diagrams, schematic diagrams, board layouts, semiconductor pin assignments and parts lists etc.) on service and covers information on parts.

- **Operating Instructions (Supplied with each equipment)**

Part No. 3-856-429-11 <ES-7 English>

Part No. 3-856-429-21 <ES-7 French>

Part No. 3-856-429-31 <ES-7 German>

Part No. 3-856-422-01 <ESBK-7011 English/French/German>

Part No. 3-858-088-01 <ESBK-7045 English/French/German>

Part No. 3-856-427-01 <ESBK-7051 English/ French/German>

Part No. 3-858-273-01 <ESBK-7052 English/French/German>

Part No. 3-856-854-01 <ESBK-7071 English/French/German>

Part No. 3-856-430-01 <RMM-ES7 English/French/German>

Part No. 3-858-087-01 <RMM-ES701 English/French/German>

Describes the information for the application and operation of each equipment.

- **ES Draw Operation Manual ESBK-7092E (Not supplied with ESBK-7071)**

Describes the detailed information about how to use ESDraw ESBK-7071.

- **Online Manual (Supplied on CD-ROM) and Operation Manual ESBK-7091E (Not supplied with ES-7)**

The Operation Manual ESBK-7091E is a printed version of a CD-ROM disk that contains an online manual.

Describes the detailed instructions about how to operate the Edit Station and the details of operation and installation which are not covered in the Operation Instructions.

## Features

The ES-7 EditStation™ is a video editing system that includes as built-in equipment all of the devices required for video editing. Powerful editing software running under the pre-installed Microsoft Windows NT<sup>1)</sup> operating system provides a graphical user interface that allows you to perform linear editing of video materials on tape and non-linear editing of materials on a disk recorder.<sup>2)</sup> The combination of easy-to-use editing software and expansion board developed especially for the EditStation enables the EditStation to function as an A/B roll editing system, video switcher, digital multi-effects, audio mixer, titler, and drawing platform. It supports a rich variety of analog and digital video signal formats and features a high-speed digital transfer function that enables you to transfer video data between the disk recorder and DSR-series VCRs at four times normal speed with no loss in video quality.

### High-quality video compression

Dynamic video compression provides efficient storage of digital signals on the disk recorder. The compression ratio is adjusted to accommodate the amount of information in the data while preserving high video quality.

### High-speed uploads and downloads

You can copy edit materials from DSR-series VCRs to the EditStation disk recorder (upload) and copy edit results from the EditStation disk recorder to DSR-series VCRs (download) at four times normal speed. The EditStation and DSR-series VCRs share a common internal format, eliminating the need for compression and decompression during uploads and downloads. This eliminates the deterioration in video quality which can result from copy operations.

### Many advanced special effect functions

Optional special effects expansion boards with built-in video switcher functions are available to provide more than 300 high-quality special effects in real time. Installation of an additional optional expansion board provides advanced non-linear three-dimensional effects such as lighting, which depicts the object as if illuminated by a light source, and trail, which produces a trail across the video image.

### Convenient graphics tools

Optional drawing software and an expansion board for drawing functions are available to provide superimposed graphics on video signals. This allows you to create graphics while checking the effect on the monitor. Lettering is provided by standard EditStation software (Text Composer) that can be used from the editing screen. This allows you to create titles and other lettering without the need to acquire a separate character generator. A file converter is also provided as a standard feature, allowing you to convert graphics data created with Photoshop<sup>3)</sup> and other graphics applications for use with this unit.

### High-quality audio signal processing

The system features a digital audio mixer as standard equipment. If you install the optional digital input/output board, you can perform input and output of video and audio signals in completely digital formats. High-quality recording of analog audio input signals is also possible.

## Features

### Support for DSR-series VCRs

The EditStation can read and perform high-speed editing of MARK IN edit point video and MARK IN and MARK OUT edit point timecode recorded with DSR-series camcorders. You can use DSR-series VCRs to upload video from tape to the EditStation's disk recorder in the background while performing other editing tasks.

### Easy operation

You can check the sequence of video clips in your EDL (Edit Decision List) in a single glance at the display on the computer monitor. Compared in conventional character-based systems, the visual display makes EDL operations easy and intuitive. You can move or insert video clips through simple drag-and-drop operations with the mouse, eliminating the need to learn complicated commands.

### Contents of the package

The ES-7 EditStation package contains the following.

- ES-7 main unit (1)
- Power cord (1)
- Keyboard (1)
- Mouse (1)
- Extension cable for keyboard/mouse, length 4 m (2)
- Parallel GPD D-sub 15-pin connector (1)

### Compatible with wide variety of analog and digital systems

You can mix both analog and digital equipment in the same editing system, and combine linear and non-linear editing. This makes it easy to begin with an inexpensive analog editing system and upgrade it by adding digital and non-linear components.

### Control panel

An optional control panel is available, featuring a jog/shuttle dial, a fader lever and other editing controls. Use of the control panel makes it easy to control VCR tape transport and perform fine adjustments of edit points.

- Software and online manual (CD-ROM disc) (1)
- Windows NT package (CD-ROM disc and manuals) (1)
- Operating Instructions (this manual) (1)
- Software License Agreement (1)
- User registration card (1)

1) Windows NT is a trademark of Microsoft Corporation.  
2) The disk recorder is a combination of the ESBK-7041 Disk Recorder Board and one or more ESBK-7045 Disk Units.

3) Photoshop is a registered trademark of Adobe Systems Incorporated.

## System Configuration

You can configure a variety of editing systems around the ES-7 EditStation. The main types are as follows.

- Analog hybrid editing system
- Digital hybrid editing system
- Digital non-linear editing system

### Analog Hybrid Editing System

As the video switcher, this system employs the optional ESBK-7021 Basic DME Switcher Board or ESBK-7023 Advanced DME Switcher Board. As the three-dimensional effects processor, it employs the optional ESBK-7022 3D Effect Board for Basic DME Switcher or ESBK-7024 3D Effect Board for Advanced DME Switcher.

The configuration includes two analog player VCRs and one analog recorder VCR. This enables hybrid editing, which is the application of special effects while switching between video stored on the disk recorder and video stored on tape.

• Analog linear editing system  
The following sections show how each type of editing system is configured.

For editing with a large number of short cuts, video clips can be copied from tape to the disk recorder. This improves editing efficiency by taking advantage of the rapid cue-up times for clips stored on disk. Longer cuts can be recorded directly from tape, saving the time required to copy clips to the disk recorder. Depending on the materials and contents of the edit, you can choose whichever method is most efficient. The results of the edit are recorded on tape by the recorder VCR. The MO drive is used to store and access edit data.

Analog hybrid editing system

## System Configuration

### Digital Hybrid Editing System

As the video switcher, this system employs the optional ESBK-7021 Basic DME Switcher Board or ESBK-7023 Advanced DME Switcher Board. As the three-dimensional effects processor, it employs the optional ESBK-7022 3D Effect Board for Basic DME Switcher or ESBK-7024 3D Effect Board for Advanced DME Switcher.

The configuration includes DSR-series or digital Betacam player and recorder VCRs. This enables hybrid editing, which is the application of special effects while switching between video stored on the disk recorder and video stored on tape. The results of the edit are recorded on tape as digital data by a digital VCR. The MO drive is used to store and access edit data.

Digital hybrid editing system

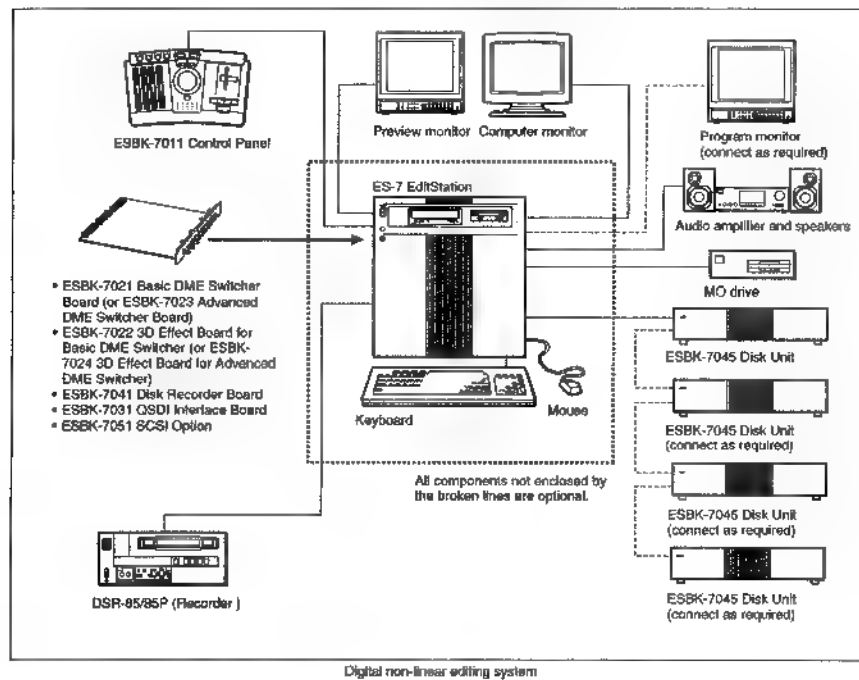

## System Configuration

### Digital Non-Linear Editing System

As the video switcher, this system employs the optional ESBK-7021 Basic DME Switcher Board or ESBK-7023 Advanced DME Switcher Board. As the three-dimensional effects processor, it employs the optional ESBK-7022 3D Effect Board for Basic DME Switcher or ESBK-7024 3D Effect Board for Advanced DME Switcher.

A DSR-series digital VCR is connected as the recorder. Materials for editing are uploaded from the digital VCR to the system's hard disks at four times normal speed. Editing is non-linear, employing data stored on the disk recorder. The results of the edit are downloaded to the digital VCR at four times normal speed. The MO (magneto-optical disk) drive is used to store and access edit data.

### Analog Linear Editing System

As the video switcher, this system employs the optional ESBK-7021 Basic DME Switcher Board or ESBK-7023 Advanced DME Switcher Board. As the three-dimensional effects processor, it employs the optional ESBK-7022 3D Effect Board for Basic DME Switcher or ESBK-7024 3D Effect Board for Advanced DME Switcher.

Two analog VCRs are connected as players, and one analog VCR is connected as the recorder. This system permits tape-based linear editing only. The results of the edit are recorded on tape by the recorder. The MO drive is used to store and access edit data.

### Analog Linear Editing System With External Switcher

If you already own a DFS-300/300P or DFS-500/500P DME Switcher, you can combine the EditStation and your current switcher. This system employs a DFS-300/300P or DFS-500/

500P DME Switcher as the video switcher and effects processor. Two analog VCRs are connected as players, and one analog VCR is connected as the recorder. This system permits tape-based linear editing only.

Analog linear editing system with external switcher

## Optional Components and Software

### Optional System Upgrade Devices

#### ESBK-7045 Disk Unit

This is a hard disk drive for storage of video and audio signals. The fast random access of the hard disk means that any part of the data can be accessed quickly. Unlike clips stored on tape, clips stored on a disk unit can be cued up instantly. In high-quality mode, one disk unit can store up to one hour of video. Up to four disk units can be connected to the EditStation.

#### ESBK-7041 Disk Recorder Board

This board installs in a slot on the motherboard of the EditStation. It controls the ESBK-7045 Disk Unit and enables non-linear editing using data on the disk unit.

#### ESBK-7011 Control Panel

This is a control panel for the EditStation featuring a jog/shuttle dial, a fader lever, adjustment knobs, MARK IN and MARK OUT buttons, and other editing controls. Use of the control panel makes it easy to control tape transport, adjust edit points, and manually specify the timing of edit transitions.

### Optional Expansion Boards

#### ESBK-7021 Basic DME Switcher Board

This is a set of two expansion boards that install in slots on the motherboard of the EditStation. The boards provide video and audio switcher functions and two-dimensional DME (Digital Multi-Effects) functions. They also provide color correction, a downstream keyer, and a chroma key function.

#### ESBK-7022 3D Effect Board for Basic DME Switcher

This is a daughter board that installs on the Basic DME Switcher Board. It provides linear and non-linear three-dimensional special effects.

#### ESBK-7023 Advanced DME Switcher Board

This is a set of two expansion boards that install in slots on the motherboard of the EditStation. The boards provide video and audio switcher functions and two-dimensional DME (Digital Multi-Effects) functions. They also provide color correction, a downstream keyer, and a chroma key function. Compared to the Basic DME Switcher Board, these boards provide even higher picture quality, enabling the addition of a wide variety of advanced special effects.

#### ESBK-7024 3D Effect Board for Advanced DME Switcher

This is a daughter board that installs on the Advanced DME Switcher Board. It provides linear and non-linear three-dimensional special effects. It also provides lighting and trails effects.

#### ESBK-7025 External Switcher Interface Board

This is an expansion board that installs in a slot on the motherboard of the EditStation. It enables control of DFS-500/500P or DFS-300/300P DME Switcher from the EditStation while playing back VCR tapes for linear editing.

#### ESBK-7031 QSDI Interface Board

This is an expansion board that installs in a slot on the motherboard of the EditStation. It enables input and output of QSDI (Quarter-inch Serial Digital Interface) video signals and AES/EBU digital audio signals. Install this board when you wish to connect equipment such as a DSR-series VCR, a CD player, or a DAT (Digital Audio Tape) recorder and player for input and output of digital audio signals.

### ESBK-7032 SDI Interface Board

This is a daughter board that installs on the ESBK-7031 QSDI Interface Board. It provides input and output of digital video signals in the component digital format (D1 format). Install this board when you wish to connect equipment such as a DSR-series digital VCR or a DVW-series digital Betacam VCR. This board is required to perform digital linear editing with the EditStation and a DSR-series VCR.

### ESBK-7051 SCSI Option

This is an expansion board that installs in an ISA slot of the EditStation to enable connection of an external MO drive. The MO drive is used to exchange edit data, including index pictures of video clips, with external equipment.

### ESBK-7052 Ethernet Option

This is an expansion board that installs in an ISA slot of the EditStation. It enables you to connect the EditStation to an Ethernet<sup>1)</sup> network. Install this board when you wish to use a network to exchange graphics or index pictures and other edit data.

### Optional Software Products

#### ESBK-7071 ESDraw™

This is a drawing program for the EditStation, provided on CD-ROM (Compact Disc Read-Only Memory). It is supplied with an adapter board which, when installed in the EditStation, enables you to perform drawing operations and view the results on a video monitor while other processing is performed in the background. An online manual explaining how to use the software is provided together with the software on the CD-ROM disc.

### ESBK-7092E Operation Manual

This is a printed manual that provides detailed information about how to use ESDraw. The contents of this manual are also provided on the ESBK-7071 ESDraw CD-ROM disc.

### Related Manuals

The EditStation is supplied with a CD-ROM disc that contains an online manual with detailed operating instructions. The online manual is also available in a printed version as the ESBK-7091E EditStation Operation Manual.

The contents of the EditStation manuals are as follows.

#### • Operating Instructions (this manual)

This manual provides an overview of the system, information about installation and connections, and basic operating instructions. It also explains how to use the online manual and provides information about specifications and other supplementary topics. After purchasing the unit, read this manual for information about installation, connections, and basic operating procedures.

#### • Online Manual (supplied on CD-ROM) and Operation Manual (optional printed manual)

These manuals provide detailed instructions about how to operate the EditStation. Refer to these manuals for details of operation and installation which are not covered in the Operating Instructions.

## Starting and Shutting Down the System

This chapter explains how to start and shut down the EditStation system, how to use the mouse and keyboard, and how to perform window operations. The operations described here are used by all editing functions.

### Starting the System

When you power the system on, a screen appears asking you to enter your user name and password. This is the logon screen, designed to prevent unauthorized use by non-registered users.

In the factory default configuration, you can begin using the EditStation immediately, simply pressing the Enter key without entering a user name and password at the logon screen.

If you wish to limit use of the EditStation to specific users, you can register their user names and passwords.

For details, see "Registering User Names and Passwords" (page 91).

To launch the system software, proceed as follows.

- 1 Power on the system hardware in the following order.
  - 1) Computer monitor, MO drive, printer and other peripherals, and VCRs, video monitor, audio amplifier or audio monitor system
  - 2) EditStation main unit

After a few moments, the message "Press Ctrl + Alt + Del to log on." appears.

- 2 Press the Delete key while holding down the Ctrl and Alt keys.

(Continued)

1) Ethernet is a registered trademark of FUJI XEROX CO., LTD.

## Starting and Shutting Down the System

The logon screen appears.

The meanings of the fields in the logon screen are as following.

**Username:** The name registered when the EditStation is shipped from the factory is "Creator". ■ other user names have been registered, the name of the user who used the system most recently is displayed.

**From:** The name registered when the unit is shipped from the factory is "ES-7". Normally you will not need to change this name. ■ you wish ■ connect two or more ES-7 units on a network, you will need to assign different names to each unit. For more information about how to change the name, refer to the Operating Instructions of the ESBK-7052 Ethernet Option.

**Password:** Nothing is registered for this field when the EditStation is shipped from the factory. ■ you have registered a password, enter ■ in this field.

### 3 Enter your user name.

When you move the pointer to the user name field, its shape changes from an arrow to a vertical line. When its shape changes, click the left mouse button. The cursor in the user name field begins to blink to indicate that you can enter your user name.

You do not need to carry out this step unless you have changed the factory default assignment and wish to use a user name other than the name displayed.

*For more information about using the mouse, see page 20.*

*For more information about using the keyboard, see page 22.*

### 4 Enter your password.

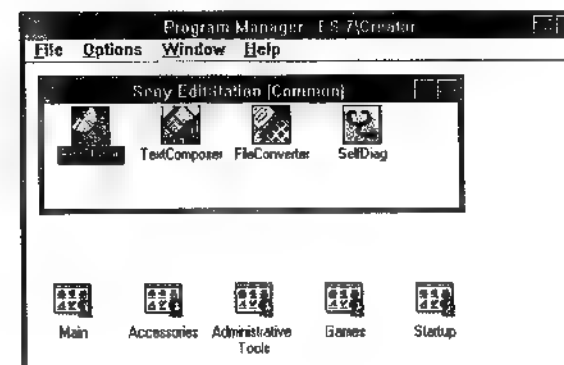

Move the pointer to the password field, click the left mouse button and enter your password. The characters that you type are masked on the screen, appearing as a row of asterisks (\*\*\*\*\*).

You do not need to carry out this step unless you have registered a password. No password is registered when the EditStation is shipped from the factory.

### 5 Press the Enter key on the keyboard, or move the pointer to the OK button and click.

The logon procedure is completed, and the Windows NT operating system is launched.

After a few moments, the Program Manager window appears. You will use this window when you start to use the EditStation, and when you turn off the power after use.

## Starting and Shutting Down the System

### Using the Mouse

#### Moving the pointer

Learn how to use the mouse pointer by moving the mouse and checking the movement of the pointer on the screen.

#### Clicking

Pressing the left button of the mouse and then releasing it immediately is called "clicking". For example, "click the icon" means to move the pointer over an icon, press the left mouse button, and then release it. (Icons are pictures on the screen which represent programs and files.) Unless an explanation specifically instructs you to "click the right mouse button", clicking is always done with the left mouse button.

#### Double clicking

Pressing the left button of the mouse and releasing it twice in rapid succession is called "double clicking". Note that if the interval between the two clicks is too long, they are treated as two separate clicks, not as a double click. You launch the EditStation editing software by double clicking the EditStation icon.

### Dragging

Using the mouse to move icons and windows on the screen is called "dragging". To drag an item on the screen, move the pointer over the item, press the left mouse button, and while keeping the mouse button pressed move the pointer to the location where you want to move the item. The movement stops at the point where you release the mouse button. In the EditStation software, you can drag pictures of video clips to arrange them in the desired recording order.

## Starting and Shutting Down the System

### Entering text and numbers

#### Entering uppercase and lowercase letters

To enter a lowercase letter or number, press the corresponding key. To enter an uppercase letter, press the corresponding key while pressing the Shift key.

#### Entering all uppercase letters

To enter all uppercase letters, press the Caps Lock key while pressing the Shift key so that the Caps Lock indicator lights. All of the letters that you enter will be uppercase letters.

To cancel entry of all uppercase letters, press the Caps Lock key again while pressing the Shift key so that the Caps Lock indicator goes out.

#### Entering new lines and confirming input

To enter a new line, press the Enter key. In dialog boxes, press the Enter key after entering a file name or other input text to confirm the input.

#### Entering a series of numbers

The numeric keypad is convenient for entering a series of numbers. To enter numbers with the numeric keypad, Press the Num Lock key so that the Num Lock indicator lights.

If you press the Num Lock key so that the Num Lock indicator goes out, the keys on the numeric keypad function as cursor keys, page movement keys, delete key and so on.

#### Deleting text

To delete the letter before the cursor, press the Backspace key.

To delete the letter after the cursor, press the Delete key.

#### Moving the cursor

To move the cursor, press the , , and keys.

#### Switching between insert mode and overwrite mode

To switch between insert mode and overwrite mode, press the Insert key. Each press of the key selects insert mode or overwrite mode.

In insert mode, a letter is inserted at the cursor position when you press a key. The letter that was formerly at the cursor position is shifted to the right.

In overwrite mode, the letter that was formerly at the cursor position is replaced by the new letter when you press a key.

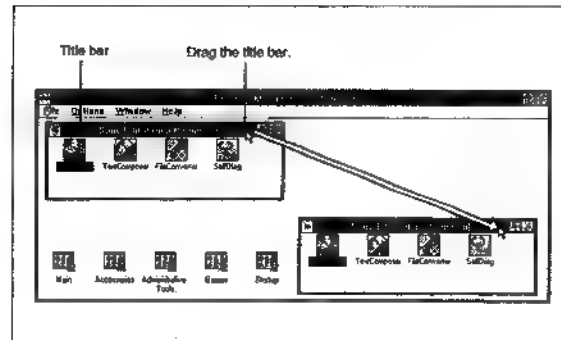

## Starting and Shutting Down the System

### Moving Windows

#### Moving windows

To move a window, move the pointer to the window's title bar and drag it to the desired position.

#### Changing the size of a window

**Changing the window size by clicking the window size buttons**  
You can use the buttons in the upper right corner of a window to change the size of the window.

To maximize the window, press the button.

To restore the window to its original size, press the button.

To reduce the window to an icon, press the button. The window returns to its original size when you double click the icon.

#### Changing the window size by dragging the borders

Whenever the window is not at maximum size, you can drag any of the four corners of the window to freely adjust its size.

You can also drag the left and right borders to change the window's width or drag the top and bottom borders to change its height.

#### Selecting menu commands

##### Displaying a menu command list

Directly below the title bar of a window is the menu bar. A list of menu commands appears when you click an item in the menu bar.

##### Selecting a menu command

With the command list displayed, keep the left mouse button pressed with the pointer over the command that you want to select. The command is highlighted and executed when you release the mouse button. This operation is called "selecting a menu command".

The following example shows how to select the "How to Use Help" command from the Help menu.

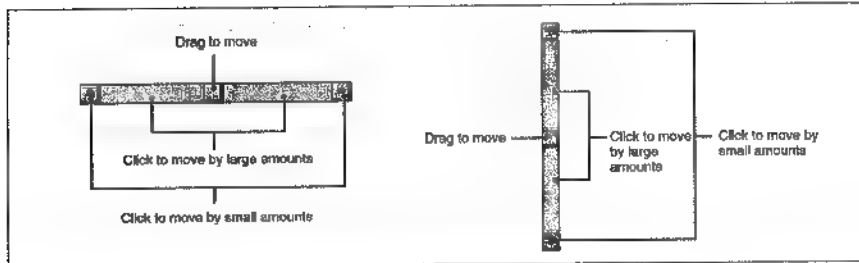

## Starting and Shutting Down the System

### Scrolling to view more information

If a picture or document is too large to fit on the screen, scroll bars like the ones shown below are displayed. You can use the scroll bars to move the display area up or down, or left and right.

### Shutting Down the System

When you have finished using the editing software, use the following procedure to turn off the power. In this manual, turning off the power is referred to as "shutting down" the system.

For more information about using the mouse, see page 20.

- 1 Move the pointer to the File menu and click the left mouse button.

The commands of the File menu are displayed.

- 2 Move the pointer to "Shutdown" and click the left mouse button.

After a few moments, the message "It is now safe to turn off your computer." appears.

- 3 Turn off the power.

#### Note

This unit is equipped with an internal hard disk for storage of system files and data other than video clips. Do not turn off the power before the message "It's now safe to turn off your computer." appears. Doing so can damage the data on the unit's hard disk. In the worst case, you may not be able to start the system again.

#### Backing up hard disk data

You should make periodic backup copies of the data on the unit's internal hard disk. Sony cannot be responsible for loss of data or records stored on the hard disk because of hardware failures or any other reason.

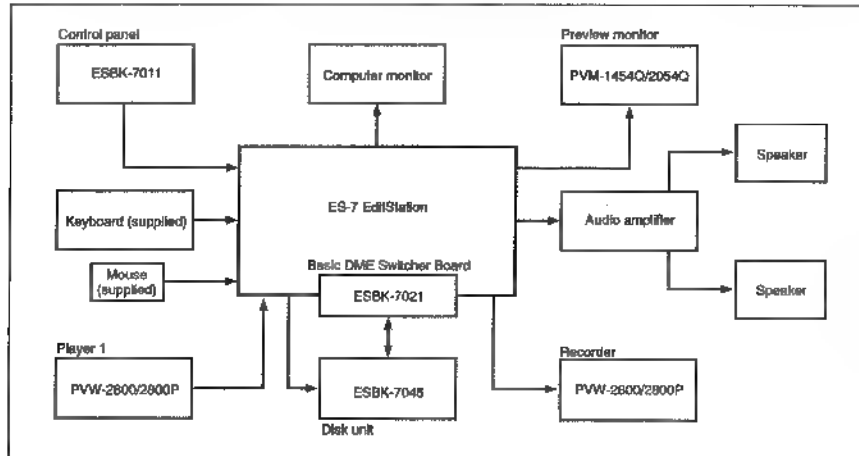

# The Basics of Editing With EditStation

This section will describe a typical editing session. It will show how to copy materials from tape to the disk recorder, how to specify the recording order, how to apply transitions between video clips, how to insert titles, and other common operations. Read this section as a guide to basic editing procedures before using the system for the first time. This section is intended for readers who have experience in video editing but are not familiar with Windows<sup>1)</sup> or readers who are familiar with Windows but have no experience in video editing. After learning the basic editing procedures, experiment by trying other editing operations while consulting the online manual.

## Reference Editing System

The examples in this chapter assume the use of an editing system configured as follows.

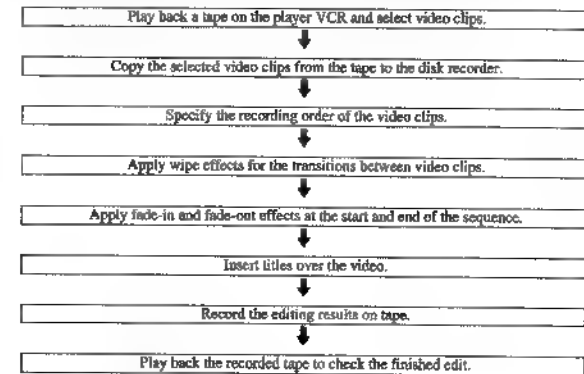

- Player 1: PVW-2800/2800P (1)
- Recorder: PVW-2800/2800P (1)
- Disk recorder board: ESBK-7041 (1 set)
- Disk unit: ESBK-7045 (1)
- Preview monitor: PVM-1454Q/2054Q (1)
- DME switcher: ESBK-7021 Basic DME Switcher Board (1 set)
- Audio monitor: Audio amplifier (1) and speakers (2)
- Control panel: ESBK-7011 (1)

Reference editing system

## The Flow of an Editing Session

The flow of the editing session described in this chapter is as follows.

Example of wipe effect

Video clips and effects in editing example

1) Windows is a trademark of Microsoft Corporation.

## The Basics of Editing With EditStation

### Starting EditStation

Proceed as follows to edit with the EditStation editing software.

- 1 Start the system.

For more information about starting the system, see page 17.

The following screen appears.

- 2 Double click the EditStation icon in the Sony EditStation group.

For more information about double clicking, see page 20.

The following screen appears.

This screen is called the EditStation initial screen. Most edit operations are performed here.

### To exit EditStation

See "Shutting Down the System" on page 26.

## The Basics of Editing With EditStation

### Identifying Parts of the EditStation Interface

The following illustration identifies the parts of the screen that will be used in this chapter.

#### 1 Menu bar

Displays menu items, which you can click to display lists of menu commands. To close a menu, click somewhere else on the screen.

The items displayed in the menu bar and the commands in menu lists vary depending on whether the Clip Bin window or the Timeline window is the active window. The active window is the window affected by editing operations. Its title bar is highlighted. To make a window the active window, click somewhere in that window.

#### 2 Toolbar

The toolbar contains a group of toolbar buttons. Clicking one of the buttons has the same effect as selecting a menu command. The toolbar buttons are very convenient because they allow you to perform common editing operations with a single click of the mouse.

*The online manual contains more information about the functions of the toolbar buttons.*

#### 3 Clip Bin window

The Clip Bin window is a temporary storage area for video clips that you have created. You can assemble a group of clips in the Clip Bin window so that they are readily available when you are choosing clips to record.

#### 4 Timeline window

The timeline window is where you perform most editing operations, such as specifying the order of edits (the smallest unit of editing data), setting transitions between scenes, inserting titles, and so on.

#### 5 Storyboard

The storyboard is where you arrange edits in the order that you want to record. You can use the storyboard to copy, delete, and rearrange edits.

#### 6 Timelines

The timelines display detailed information by track along the temporal axis of the recorder tape. This is where you arrange, modify, and delete edits, set up effects, insert titles, and execute editing operations such as preview and recording. There are separate timelines for the video, audio, effect and other tracks.

### Preparing a Master Tape

To edit with the EditStation, you will need to prepare a tape with pre-recorded black burst signals, CTL (control) signals, and timecode. This tape is called the master tape. It is used to record the results of the edit. If you already have a master tape, you can proceed to "Creating Video Clips" on page 34.

If you do not have a master tape, follow the procedure below to prepare one.

- 1 Insert a new tape into the recorder VCR.

If the tape has been partially played back, rewind it to the start.

- 2 In the EditStation initial screen, select Create Master Tape from the Tools menu.

The Create Master Tape dialog box appears.

- 3 Select RECORDER in the Select VTR field, enter 23:59:30:00 in the Start timecode field, and click the OK button.

Timecode is expressed in units of Hours:Minutes:Seconds:Frames. Black burst signals, CTL signals, and timecode are recorded on the entire tape from the start to the end.

## The Basics of Editing With EditStation

Video clips are the materials that you will use to create your edit. The first step in an edit is to create video clips by using the following procedure.

**1** Insert a tape with source materials into the player VCR.

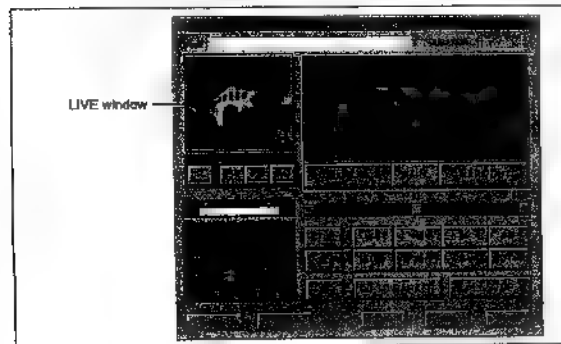

**2** In the EditStation initial screen, click the Clip icon.

If the Clip icon is dimmed and cannot be selected, click somewhere in the Clip Bin window to make it the active window.

The following window appears. This is the Video Clip Editor dialog box.

P1 (player 1) is selected as the source VCR, and the video of player 1 is displayed in the LIVE window.

**3** Play back the tape in player 1 to find the desired scene.

Use the following buttons.

You can also perform the same operations with the control panel.

Operation	Video Clip Editor operation	Control panel operation
Normal playback	Click ►.	Press the PLAY button.
Reverse playback	Click ◀.	In shuttle mode, rotate the search dial slightly in the counterclockwise direction.
High-speed search	Click ◀◀ or ▶▶.	In shuttle mode, rotate the search dial all the way in the clockwise or counterclockwise direction.
Low-speed search	Click ◀ or ▶ for frame-by-frame playback.	In jog mode, rotate the search dial slowly.
Still playback	Click the STILL button.	Move the search dial to the center position. If the STILL function has been assigned to the [ES] button, press the [ES] button.

**4** Specify the start (IN point) of the video clip.

Video Clip Editor: Click the MARK IN button at the desired scene.  
Control panel: Press the MARK IN button at the desired scene.

(Continued)

- 5** Specify the end (OUT point) of the video clip.

**Video Clip Editor:** Click the MARK OUT button at the desired scene.

**Control panel:** Press the MARK OUT button at the desired scene.

- 6** In the Video Clip Editor dialog box, click the Name field and enter the name of the video clip.

The name can be up to 128 characters long.

- 7** Click the Add button in the Video Clip Editor dialog box.

A reel name dialog box like the one shown below appears once when you create the first video clip after inserting a program materials cassette.

Enter a reel name up to 6 characters in length and click the OK button. An icon appears in the Clip Bin window, showing the video for the IN point of the clip you have created.

Once you have entered the reel name, you can simply click the Add button to add more clips. However, if you change the playback VCR or insert a new program materials cassette, you will have to enter a reel name again after clicking the Add button.

- 8** Repeat steps 3 to 7 to create more video clips.

- 9** Click the Close button in the Video Clip Editor dialog box.

The Video Clip Editor dialog box closes.

## The Basics of Editing With EditStation

The next step is to copy the newly created video clips to the EditStation's disk recorder. Copying the clips to the disk recorder is not mandatory, but clips located on the disk recorder can be cued up instantly, for greater editing efficiency.

Proceed as follows to copy the clips.

- 1 While holding down the Shift key on the keyboard, click the Clip Bin window icon for the clip that you want to copy.

The frame of the selected clip changes color from black to light blue. If you wish, you can select several clips at once.

- 2 Select Upload to Disk Recorder from the Clip menu, and then select Selected.

Player 1 begins to play back the tape and the clips selected in step 1 are copied to the disk recorder.

The disk indicators of the clips that have been copied to the disk recorder light in green.

A cut is a transition in which one scene is replaced instantly by another scene. If you have arranged your clips in the storyboard and have not specified otherwise, the transitions between scenes will be cuts. The following procedure uses cuts to link scenes D, C, and B.

- 1 Drag video clip D from the Clip Bin window to the storyboard.

See page 21 for more information about dragging.

- 2 Drag video clips C and B in that order from the Clip Bin window to the storyboard.

This specifies cut transitions between video clips D and C and video clips C and B.

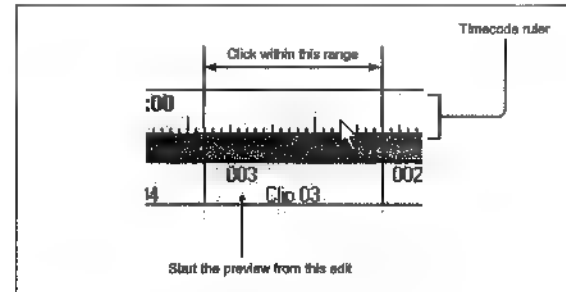

## The Basics of Editing With EditStation

### Previewing the Edit Results

A preview is a rehearsal in which you play back the edited video to check whether you have achieved the results you want. A preview is not recorded by the recorder.  
In this section we will conduct a preview to check the results of our cut editing.

To conduct a preview, proceed as follows.

- 1 Click the timecode ruler at any point above the edit<sup>1)</sup> where you want to start the preview.

The timeline cursor<sup>2)</sup> moves to the clicked position.

- 2 Click the Preview button.

The timeline cursor moves to the start of the edit and the preview begins from that point. The preview video is displayed on the video monitor.

■ the example on page 39, when a preview is executed from the first edit, [D], [C], and [B] are played back in order with a cut transition between each scene.

After conducting a preview, make any adjustments that may be necessary and proceed to the next stage in the editing.

### Stopping a preview before it finishes

Click the ALL STOP button on the screen, or press the ALL STOP button on the control panel.

1) An edit is the smallest unit of editing data. Edits are shown on the timeline as rectangular frames. Each edit corresponds to a specific video clip in the Clip Bin window.

2) The timeline cursor is the cursor that shows the current position on the timeline. Video under the timeline cursor is displayed on the video monitor.

## The Basics of Editing With EditStation

### Adjusting Edit Points

If a preview shows that you need to adjust the duration of a clip, adjust the clip's IN point or OUT point.

You can use the same methods to adjust the duration of clips in the Clip Bin window and clips on the storyboard. If you adjust the duration of a clip in one window, the duration of the clip in the other window changes automatically.

Proceed as follows to adjust the duration of a clip.

- 1 Double click the icon of the video clip you want to adjust.

The Video Clip Editor dialog box opens.

- 2 Click the IN button or the OUT button.

The playback position changes to the position of the IN point or OUT point, and the video for that position appears in the LIVE window.

- 3 Click the IN button or the OUT button to adjust the IN point or OUT point, then click the MARK IN or MARK OUT button to set the new IN or OUT point.

Each time you click the button, the playback position moves one frame forward or back.

You can also put the search dial on the control panel into jog mode and rotate it slowly to make fine adjustments of the playback position.

- 4 Click the Replace button.

The Video Clip Editor dialog box closes and the IN or OUT timecode value of the video clip in the Clip Bin window and storyboard changes to reflect the adjusted IN or OUT point.

**Points to note when increasing the duration of a video clip**  
 In the factory default configuration, video from two seconds before the IN point to two seconds after the OUT point is copied to the disk recorder when you copy video clips from tape to the disk recorder. Therefore, you cannot add more than two seconds at the start and end of a clip when working with clips stored on the disk recorder.  
 If you wish, you can increase the length of video recorded at the start and end of a clip to more than two seconds. Make the Clip Bin window the active window, select Options from the Settings menu, and set the desired length.

As shown in the figure below, you can begin by copying a video clip with more than enough duration to the disk recorder and then create shorter clips from the longer clip. In this case there is no limitation on the adjustment of edit points, even when you are working with clips stored on the disk recorder.

If you know in advance that you may want to change the edit points of a video clip, you should normally start by uploading a longer clip to the disk recorder, or use the Settings menu to change the factory default length.

## Adding Wipe Effects

A wipe is a transition effect in which one scene gradually expands to replace another scene. This section will explain an example that adds two types of wipe transition, and then uses a cut as the third transition. When you preview after adding the wipes, the scenes change as shown below.

Proceed as follows.

- 1 Click the effect button at the top of the Timeline window.

The Effect dialog box opens.

- 2 Click the Wipe tab in the Effect dialog box.

This shows wipe patterns.

(Continued)

## The Basics of Editing With EditStation

- 3** On video track V1 or V2, click the edit that you want to remain as the scene after the wipe transition.

The frame of the clicked edit becomes thicker to show that the edit is selected.

- 4** Drag a wipe pattern to the position where you want to insert it on the Effect track.

The wipe pattern is displayed on the Effect track. The edit that will be visible when the wipe finishes moves automatically to the V2 track. There is an overlap between the edits visible before and after the wipe. The length of the overlap is equivalent to the duration of the wipe.

- 5** Repeat steps **3** and **4** to set a second wipe pattern.

The timelines now appear as shown below.

- 6** Click the Close button in the Effect dialog box.

The Effect dialog box closes.

### About edit blocks

When you add an effect, such as wipe, that involves a transition between scenes, neighboring blocks on the timeline are joined into a single block. This kind of block on the Edit track is called an edit block.

Previews are conducted in units of edit blocks. For example, if you click the Preview button when the timeline cursor is located in the position shown below, the timeline cursor will move to the start of Clip 004 (not to the start of Clip 002), and the preview will start from the start of Clip 004.

### Creating a Black Clip

Fade in and fade out are effects in which the video appears or disappears gradually. This section will explain an example that uses a black clip background to fade in from black and to fade out to black. The procedure uses the Dissolve tab of the Effect dialog box. Dissolve is another effect in which video appears or disappears gradually.

Proceed as follows.

- 1 Make the Clip Bin window the active window and select Color Clip Editor from the Clip menu.

The Color Clip Editor dialog box appears.

- 2 Click the Black tab and enter 00:00:02:00 in the Duration field.

The duration is expressed in units of Hours:Minutes:Seconds:Frames. This example creates a clip that displays a black picture for two seconds.

- 3 Click the Add button and then the Close button.

A black clip icon appears in the Clip Bin window and the Color Clip Editor dialog box closes.

- 4 Drag the black clip icon from the Clip Bin window to the beginning and end of the edits on the storyboard.

(Continued)

## The Basics of Editing With EditStation

- 5** Click the effect button in the Timeline window.

The Effect dialog box appears.

- 6** Click the Dissolve tab in the Effect dialog box.

- 7** On the V1 track, click the edit for the scene that will remain after the fade-in (the second edit from the start).

The frame of the clicked edit becomes thicker to show that the edit is selected.

- 8** Drag the dissolve icon to the first transition on the Effect track.

- 9** Click the final edit on the V1 track.

The frame of the clicked edit becomes thicker to show that the edit is selected.

- 10** Drag the dissolve icon to the final transition on the Effect track.

As shown below, a dissolve effect is set for the first and final edits.

- 11** Click the Close button of the Effect dialog box.

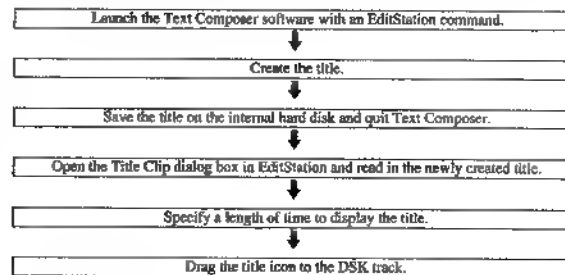

The Effect dialog box closes.

## The Basics of Editing With EditStation

### Inserting a Title

The flow of operations for inserting a title into video is as follows. To prepare the title text, use the Text Composer software that comes pre-installed on the system. You can call Text Composer from within EditStation.

### Creating a title

Proceed as follows ■ create a title.

- 1 Select Text Composer from the Tools menu.

Text Composer is launched, and the following screen appears on the video monitor. This is the Text Composer main screen.

- 2 Click the create text button on the main menu, use the mouse to move the text cursor (the vertical line) to the position on the screen where you want to insert the title, and click the position.

- 3 Enter the title from the keyboard and click somewhere on the screen away from the title text to confirm the input.

The title that you entered is displayed on the video monitor with edge and shadow effects.

For details about changing the size and color of the title and adding or removing edge and shadow effects, refer to the online manual.

- 4 Click the File button on the main menu.

The File menu appears.

(Continued)

## The Basics of Editing With EditStation

- 5 Click the Save button on the File menu.

The Save dialog box appears.

- 6 Click the With Image check box to make a check mark appear in the box, enter a file name for the title file in the name field, and click the OK button.

File names can be up to 256 characters in length, and can contain spaces. Uppercase letters are distinguished from lowercase letters. For this example, enter the file name "Title 1" and click the OK button.

When you click the OK button, the screen returns to the main menu.

- 7 Click the File button on the main menu and click the Quit button on the File menu.

The Text Composer screen closes.

## Inserting a title into the video

Proceed as follow to insert a title into the video.

- 1 Make the Clip Bin window the active window and select Title Clip Editor from the Clip menu.

The Title Clip Editor dialog appears.

- 2 Click the Still tab, and then click the Browse button.

A dialog box appears so that you can browse the hard disk for the title file created earlier.

(Continued)

- 3 Select the directory "CAES-7ADATA".

Double click the directory "CA" at the top of the directory list to show the directories located below that directory. Find the directory "ES-7" and double click it. Then find the directory "DATA" below the "ES-7" directory and double click it. The directory changes to "CAES-7ADATA".

- 4 Select "Title 1.edr" from the file list by clicking it, and then click the OK button.

The title that you created earlier is read in.

- 5 Enter 300 in the Pause Time box.

The pause time unit is frames. The title will be displayed for the length of time specified in this field. In this example, the title will be displayed for 300 frames (about 10 seconds).

- 6 Click the Add button, and then the Close button.

A title clip icon appears in the Clip Bin window and the Title Clip Editor dialog box closes.

- 7 Drag the title clip icon from the Clip Bin window to the DSK track.

To adjust the position of the title clip on the DSK track, click the title clip icon, click the magnifying glass button in the Timeline window, and press the  $\leftarrow$  and  $\rightarrow$  keys on the keyboard.

In the position shown below, the title will be superimposed over the video of clip 004 for about 10 seconds after completion of the fade in.

## Previewing the edit results

The steps above complete the operations required for this example.

Before recording, it is a good idea to conduct a preview to check the overall contents and make sure that you achieved the results you wanted. If necessary, you can then go back and make any required adjustments.

To conduct a complete preview, proceed as follows.

- 1 Make the Timeline window the active window and select Set Timeline Cursor from the Execute menu.

A timecode input dialog box appears.

- 2 Enter 00:00:00:00 in the text box and click the OK button.

The timeline cursor moves to the left edge of the timeline.

You can click the left edge of the timeline ruler to move the timeline cursor all the way to the left.

- 3 Click the Preview button.

The preview starts from the first edit on the timeline.

## The Basics of Editing With EditStation

### Recording the Edit Results

If the preview revealed no problems, you are ready to record the edit results on tape.

To record, make the Timeline window active and select Download to VTR from the Tools menu.

The recorder tape begins to run and the edit results are recorded. The recorder tape stops automatically when recording finishes.

### Checking the recording

To check what you have recorded, proceed as follows.

- 1 Click the clip icon in the Clip Bin window.

The Video Clip Editor dialog box opens.

- 2 Click the R button under the LIVE window.

The recorder VCR becomes the source VCR.

- 3 Use the tape transport control buttons in the Video Clip Editor dialog box to rewind the tape to the beginning and play it back.

The video recorded on the tape appears on the video monitor.

### Saving the Edit File

After finishing the edit, you will want to save the edit file. The file saved at this point contains the video clips, effects, titles, and other data that were used in the editing. Saving the data in a file allows you to recreate the edit results. For example, you can work up to the preview stage, save the data in a file, and come back the next day to record the edit results. Or you can finish part of the project and come back to it later to add new material.

Proceed as follows to save the edit data in a file.

- 1 Select Save As from the EditStation File menu.

The Save As dialog box appears.

- 2 Enter the file name and click the OK button.

The file name can be up to 256 characters long. Specify \*.prj as the extension at the end of the file name.

The current state of every EditStation window is saved in the file, enabling you to come back and pick up where you left off.

To open the edit file, select Open from the EditStation File menu and enter the file name.

## The Basics of Editing With EditStation

### Using the Online Manual

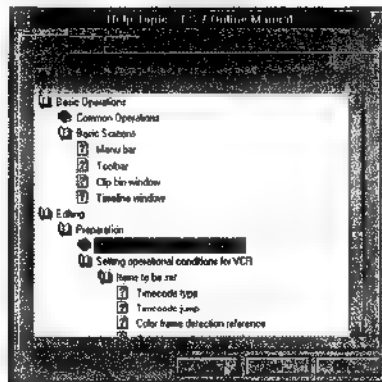

In real-life editing situations, the basic operations described in this chapter will not be enough. You will need more detailed information about advanced operations and settings. The online manual is a detailed guide with information about every aspect of the EditStation. To use the online manual, proceed as follows.

- 1 Insert the supplied CD-ROM disc.

For more information about inserting CD-ROM discs, see "Inserting and removing CD-ROM discs" (page 68).

- 2 Select Contents from the EditStation Help menu.

The Contents tab of the Help Topics window appears.

The book icons represent topics organized by category. To view the topics in a category, click the book icon and then click the Open button. The book opens and the topics appear. To close a book and remove the topics from the screen, click the book and then click the Close button.

The [?] icons represent the help topics in a category.

- 3 To view the contents of a topic, click the [?] icon and then click the Display button.

The contents of the topic are displayed.

### To return from a help topic to the Contents

Click the Contents button.

### Using jumps and glossary definitions to find information

Most help topics contain jumps and glossary definitions: words that are underlined and displayed in green indicate that they lead to further information.

#### Jumps

Jumps are displayed in green with a solid underline. You can click a jump to go to another topic with related information. To return from a jump, click the Back button at the top of the Help window.

Timecode jump function  
Color frame detection reference  
Color time phase correction

#### Glossary definitions

Glossary terms are displayed in green with a dotted underline. When you click a glossary term, a pop-up window appears with a definition of the term. To remove the definition from your screen, click anywhere on your screen, or press the ESC key.

Normally use VITC. When the tape is high to read the ATC (2x speed or d

## The Basics of Editing With EditStation

### Using Index to find information

When you want to find information about a certain word, you can use the Index tab to display all topics associated with that word. To search for information using Index, proceed as follows.

- 1 Click the Index button of the Help Topics window.

- 2 Type a word, or select one from the list of matching words. Then click Display.

A list of topics associated with that word is displayed.

- 3 Select the topic that you want to view, then click Display.

The Help topic that you selected is displayed.

### To close the online manual

Select Exit from the File menu of the Help Topics window.

This completes the introduction to EditStation. To exit EditStation, proceed as follows.

From the File menu, select Exit.

If you have made any editing changes and not yet saved them in a file, a dialog box appears asking whether you want to save them. Save the changes if necessary.

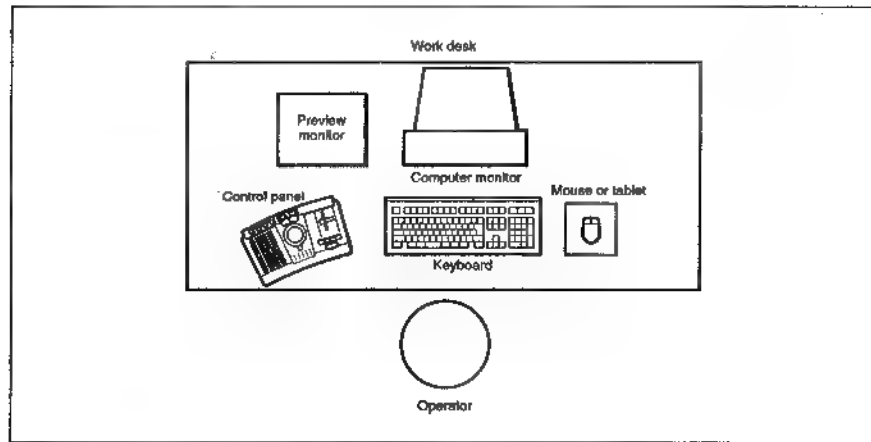

If there are no unsaved changes, the EditStation window closes immediately.

## Arranging System Components

To increase editing efficiency, take the following points into consideration when installing the EditStation.

- Place the video monitor on the left side of the operator and the computer monitor<sup>1)</sup> on the right side.
- Operate the control panel with the left hand and the mouse or tablet with the right hand.
- Place the ES-7 main unit<sup>2)</sup> and VCRs where they will be easily accessible, according to the space available in your work environment.

Arrangement of system components

1) If you wish to install the ES-7 main unit at a distance from the computer monitor, use a multi-cable with a D-sub 15-pin connector on one end and 5 BNC cables on the other end. Use 5 BNC extension cables, connected to the BNC connectors of the multi-cable. Always use BNC extension cables of the same length and characteristics. If the cables are of different lengths, the phase of the output signals from the BNC connectors will not be the same. Use of a multi-cable extension cable is recommended. However, note that picture quality may decline if the extension cable is too long.

2) To allow the ES-7 main unit to be installed at a distance from the mouse and keyboard, connect the supplied 4-meter keyboard and mouse extension cables to the regular keyboard and mouse cables. A 5-meter connection cable is supplied for the control panel.

## Using Floppy Disks

The EditStation uses floppy disks to share EDL data with other editing units. Software upgrades may also be provided on floppy disks. This section will explain the basics of handling floppy disks.

### Types of floppy disks

You can use 2DD and 2HD floppy disks with this unit. The differences between 2DD and 2HD floppy disks are as shown below.

Type	Recording capacity for formatting
2DD	720 KB
2HD	1.44 MB

Some editing units can read only 2DD floppy disks. To exchange editing data with these units, you will need to use 2DD floppy disks.

### Inserting and removing floppy disks

Insert floppy disks with the label side up. Push the disk into the disk drive until you hear a click. To remove a floppy disk, wait until the access indicator goes out and then press the disk drive eject button.

### Floppy disk drive names

To read the data from a floppy disk, you must specify the drive name of the floppy disk drive. The floppy disk drive of this unit has the drive name "A:".

### Formatting floppy disks

Before using a floppy disk, you will need to initialize it by formatting it. Proceed as follows to format a floppy disk.

- 1 Log on using the procedure explained in "Starting the System" (page 17).

The Program Manager window appears.

- 2 Insert a floppy disk into the disk drive slot.

#### Note

When you format a floppy disk, any data that may have been stored on the disk is erased. Before formatting a floppy disk, check to be sure that it does not contain any valuable information.

- 3 Double click the File Manager icon in the Main group.

The File Manager window opens.

- 4 Select Format Disk from the Disk menu.

The following dialog box appears.

- 5 Select 1.44 MB (2HD) or 720K (2DD) from the Capacity list and click the OK button.

Formatting begins when you click the Yes button in the Confirm Format Disk dialog box. When formatting is finished, a message appears asking if you want to format another floppy disk. Click the Yes or No button as required.

- When finished, select Exit from the File Manager File menu.

The File Manager window closes.

## Using CD-ROM Discs

The software and online manual for this unit are supplied on a CD-ROM disc. Software upgrades may also be provided on CD-ROM discs. This section will explain the basics of handling floppy disks.

### Inserting and removing CD-ROM discs

#### Inserting CD-ROM discs

Proceed as follows to insert a CD-ROM disc.

- 1 Press the EJECT button to bring the tray out.

- 2 Place the CD-ROM disc on the tray with the label side up.

Be careful to place the disc so that it is level on the tray.

- 3 Press the EJECT button to close the tray.

#### Removing CD-ROM discs

To remove a CD-ROM disc, press the EJECT button to bring the tray out, lift the disc from the tray, and press the EJECT button again to close the tray.

#### If the tray does not come out when you press the eject button

First shut down the system using the procedure explained in "Shutting Down the System" (page 26). Then open the tray as follows.

Insert a tool with a long metal tip into the emergency eject hole, and push in until the tray cover opens slightly. When the tray cover opens, grasp it and pull the tray the rest of the way out.

### CD-ROM drive names

To read the data from a CD-ROM disc, you must specify the drive name of the CD-ROM disc drive. The CD-ROM disc drive of this unit has the drive name "D:".

## Connecting System Components

This section provides examples that show how to connect the components in your editing system.

The VCR connection examples in this section assume that an ESBK-7045 Disk Unit has been connected to the EditStation.

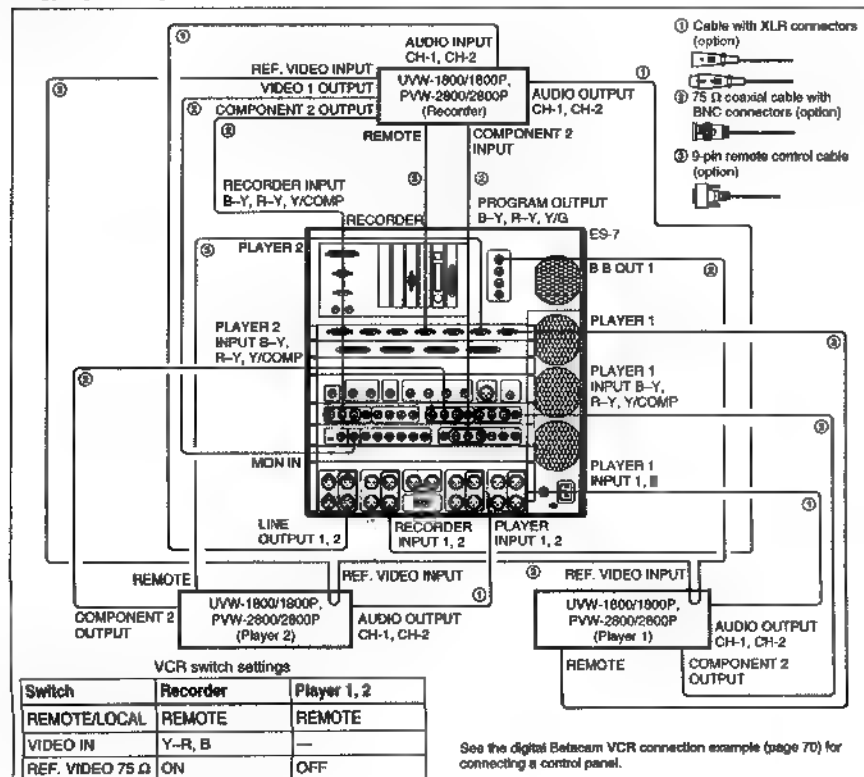

For more information about connecting a disk unit, see page 72.

### Connecting analog VCRs

You can do the following with a system configured as shown below.

- Do linear editing using materials stored on tape and VCR playback.
- Copy clips from tape to the disk recorder.

- Do non-linear editing using materials stored on the disk recorder.
- Record the results of the edit on tape as analog component video signals.

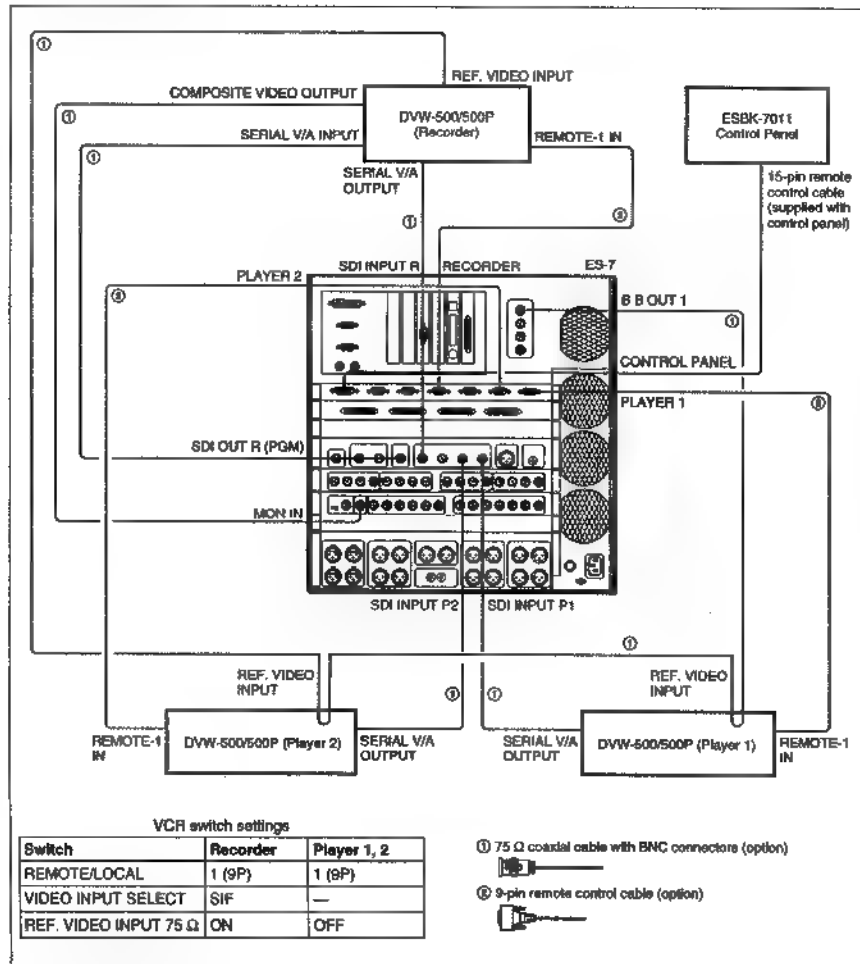

## Connecting System Components

### Connecting digital Betacam VCRs

You can do the following with a system configured as shown below.

- Do linear editing using materials stored on tape and VCR playback.
- Copy clips from tape to the disk recorder.

- Do non-linear editing using materials stored on the disk recorder.
- Record the results of the edit on tape as digital Betacam video signals.

## Connecting DSR-series digital VCRs

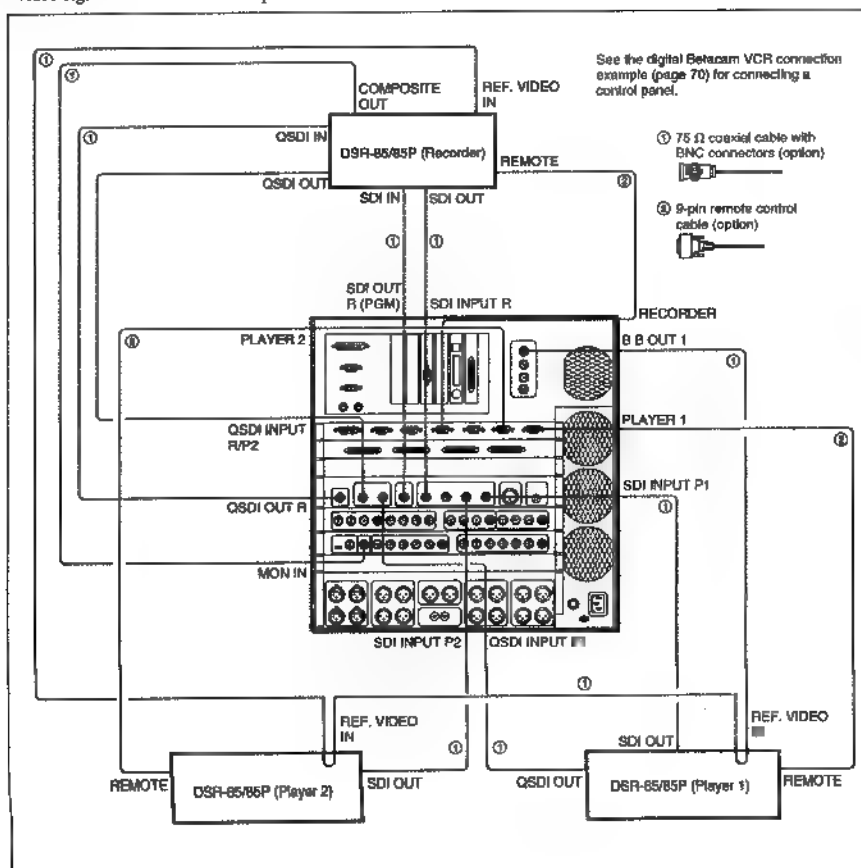

You can do the following with a system configured as shown below.

- Do linear editing using VCR playback of materials stored on tape.
- Copy clips from tape to the disk recorder at 4 times normal speed.
- Do non-linear editing using materials stored on the disk recorder.
- Record the results of the edit on tape as serial digital video signals at 4 times normal speed.

In this example, both SDI and QSDI signals are connected. The roles of the signals are as follows.

**SDI signals:** Used in linear editing and hybrid editing.

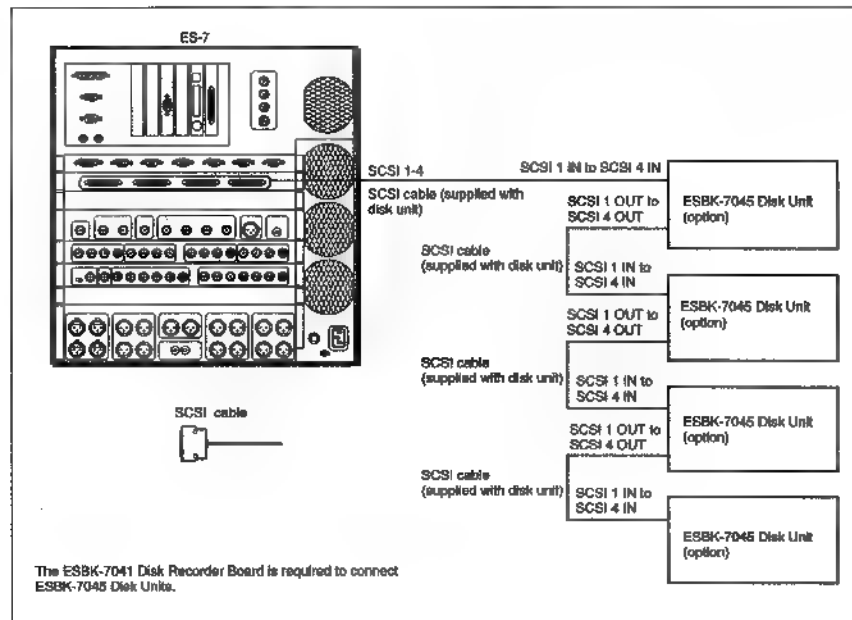

**QSDI signals:** Used in non-linear editing and for uploads and downloads at 4 times normal speed.

## Connecting System Components

You can do the following with a system configured as shown below.

- Do non-linear editing using materials stored on the disk recorder.
- Record up to 4 hours of video on the disk recorder in high-quality mode.

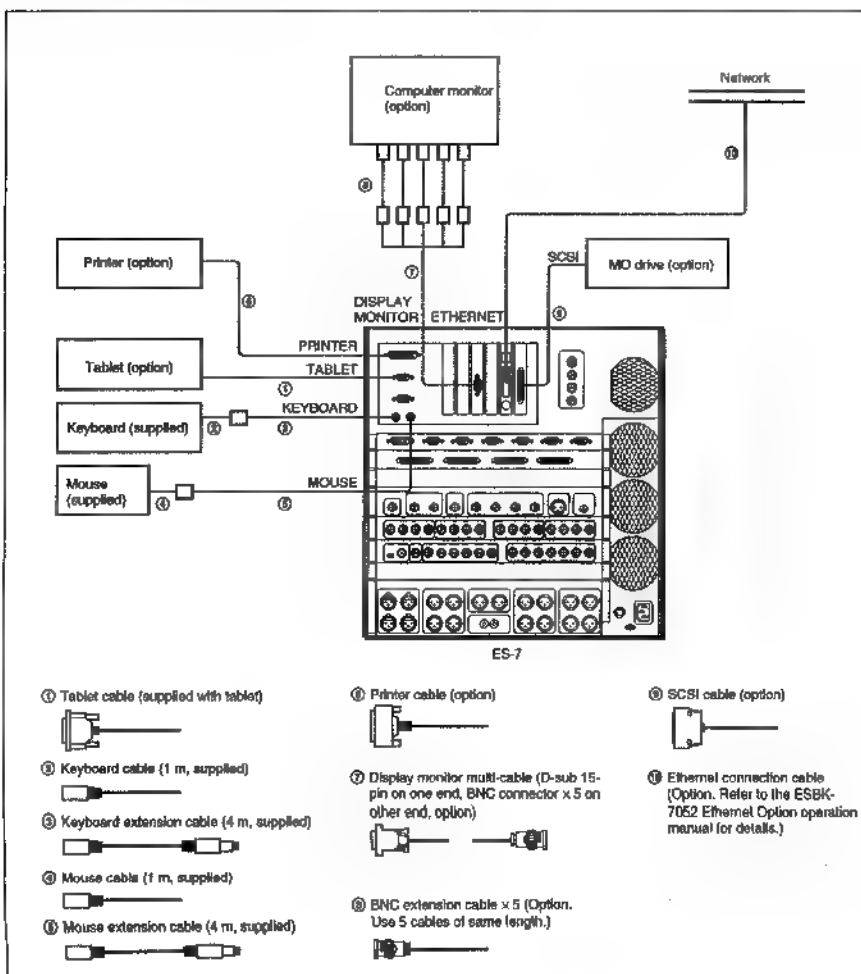

## Connecting Computer Peripherals

You can do the following with a system configured as shown below.

- Use a tablet to create graphics.
- Send and receive video and editing data over a network.

- Store editing data on MO disks.
- Print editing data.

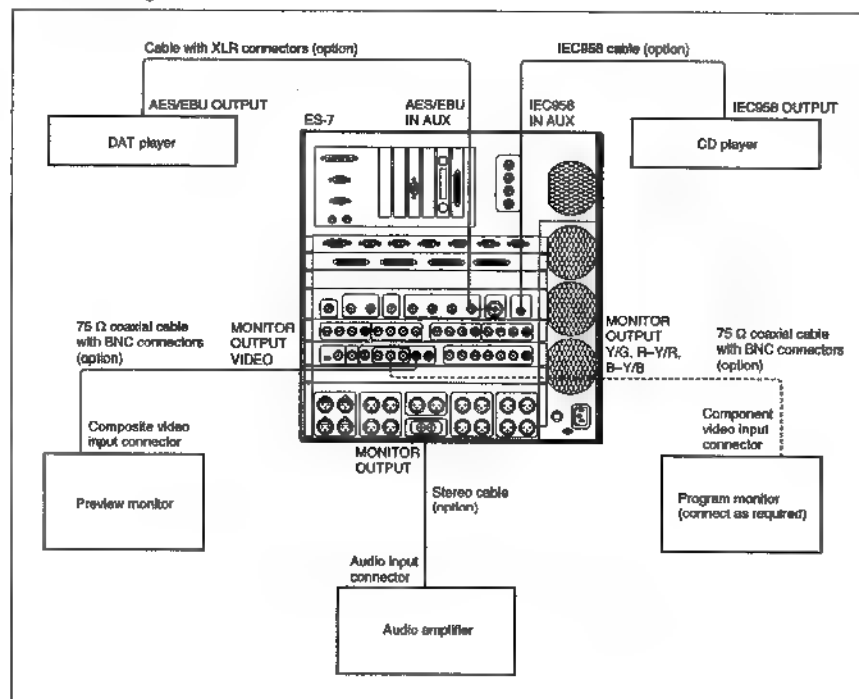

## Connecting System Components

You can do the following with a system configured as shown below.

- Record digital audio signals from CDs or DATs to videotape.
- Monitor audio signals.

- Monitor video signals before recording.
- Monitor signals input to the recorder.

## Connecting an External DME Board

You can do the following with a system configured as shown below.

- Do linear editing using materials stored on tape and VCR playback.
- Use the DFS-300/300P/500/500P to apply effects and switch between scenes.
- Record the edit results as analog component video signals.

### Setting the editor selection switch on the DME switcher

When connecting a DFS-300/300P/500/500P DME switcher, set the editor selection switch on the DME switcher as follows.

DFS-300/300P: PVE-500

DFS-500/500P: BVE-900

### Types of editing that can be done

The only kind of editing that can be done with a system configured as shown below is linear editing of analog video signals. Non-linear editing and editing of digital signals are not possible.

### Signal connections, settings, and limitations

- When you connect an external DME switcher, the outputs of the MONITOR OUTPUT and PROGRAM OUTPUT connectors of the ES-7 are as follows.

**MONITOR OUTPUT connector:** The output is always the component key fill signal of the internal titler of the ES-7. Connect to the DSK VIDEO IN connector or the INPUT-4 connector of the DFS-300/300P/500/500P.

**PROGRAM OUTPUT connector:** The output is always the key source signal of the internal titler of the ES-7.

- When inputting the key fill signal to both the DSK VIDEO IN and INPUT-4 connectors, an external signal distributor is required.
- When you connect an external DME switcher, connect the output of the PGM OUT connectors of the DFS-300/300P/500/500P to the AUX INPUT connectors of the ES-7.
- The correspondence between VCRs and the INPUT 1 to 4 connectors of the DFS-300/300P/500/500P is as follows.

INPUT-1: PLAYER-1

INPUT-2: PLAYER-2

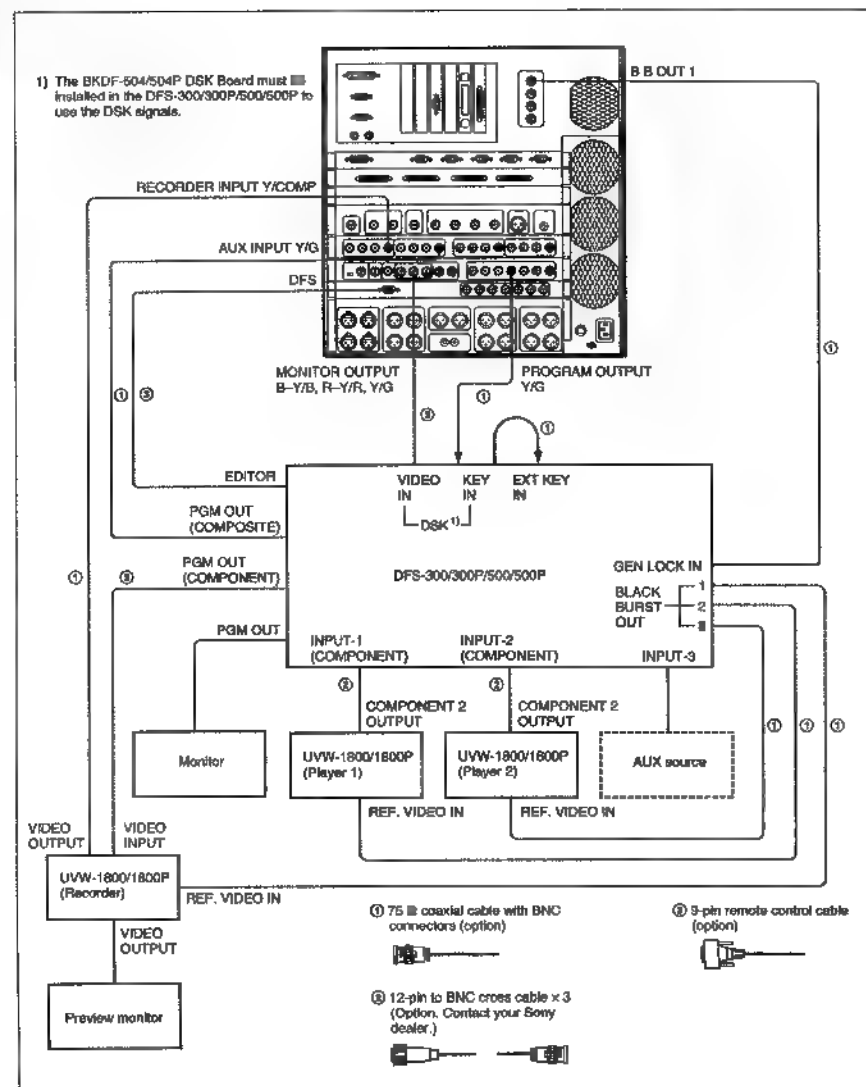

INPUT-3: AUX

(INPUT-4: Titler key fill)

Set the input signal formats with the input signal format selection switches on the AD board of the DFS-300/300P/500/500P. You cannot set the format from the ES-7 editing software.

- Connect the video monitor that you will use for previews to the VIDEO OUT connector of the recorder VCR.
- In the EditStation editing software, make the Timeline window the active window, select Options from the Settings menu, and set Preview Mode to PB/EE.
- When you connect an external DME switcher, you cannot use the function that superimposes status information on the output of the MONITOR OUTPUT VIDEO connector.
- You can operate the DFS-300/300P/500/500P from the control panel supplied with the DFS-300/300P/500/500P. However, these operations will not be reflected in the screens of the EditStation editing software.

## Connecting System Components

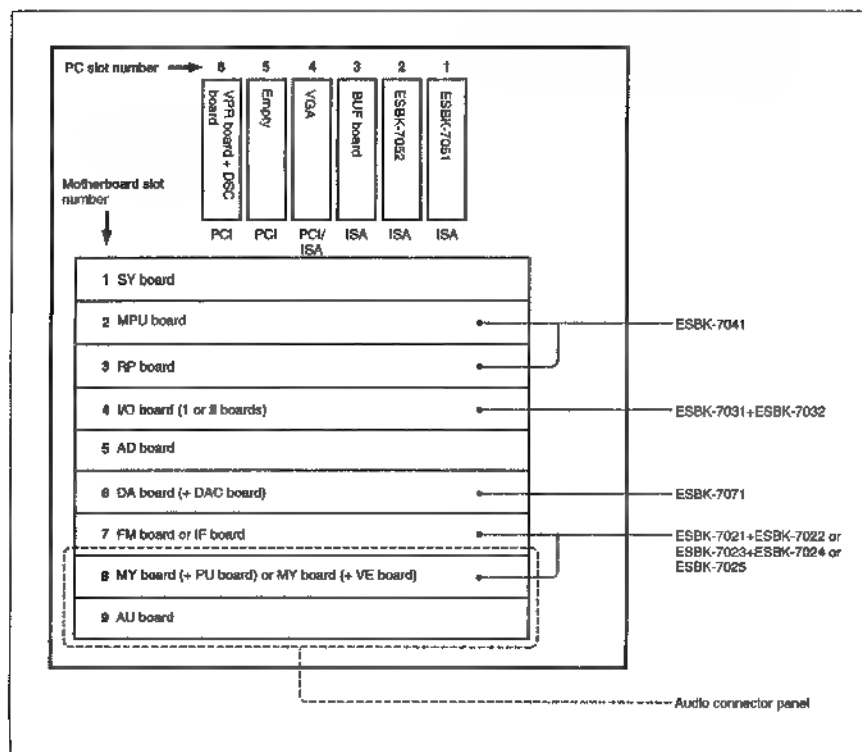

## Installing Optional Boards

A variety of expansion boards are available for use with the ES-7. This section explains how to install the optional expansion boards.

### Warning

- Always power the unit off before installing an expansion board. Installing boards with the power on risks fire and electric shock.
- Be careful not to injure your hands or fingers by cutting them on the edges of expansion boards or other components.

When installing an optional board, be sure to install it in the correct slot, as shown in the figure below. Installation in the wrong slot can result in damage to the unit.

## Installing Optional Boards

Use the procedure described below to install the following expansion boards on the motherboard.

- ESBK-7041 Disk Recorder Board
- ESBK-7031 QSDI Interface Board
- ESBK-7021 Basic DME Switcher Board
- ESBK-7023 Advanced DME Switcher Board
- ESBK-7025 External Switcher Interface Board

### Note

The following optional boards are daughter boards that install on another optional board (parent board). Before installing the parent board on the motherboard, install the daughter board on the parent board.

If you want to install a daughter board on a parent board that has already been installed on the motherboard, remove the parent board from the motherboard and reinstall it after installing the daughter board.

- ESBK-7022 3D Effect Board for Basic DME Switcher (*see page 82*)
- ESBK-7024 3D Effect Board for Advanced DME Switcher (*see page 83*)
- ESBK-7032 SDI Interface Board (*see page 84*)
- DAC Board for ESBK-7071 (*see page 85*)

- 1 Remove the two screws and remove the blank panel.

- 2 Insert the optional board into the specified slot.

- 3** Firmly push the board all the way in.

- 4** Replace the blank panel and fasten with the screws removed in step 1.

**Notes on Installing the DME switcher boards**  
The ESBK-7021/7023 DME switcher boards are supplied as 2-board sets. Before attaching the DME switcher boards, remove the audio connector panels.

## Installing Optional Boards

### Installing the ESBK-7021/7023 MY board

- 1** Remove the two screws from the audio connector panel.

- 2** Pull the audio connector panel and the AU board halfway out.

**Note**

Place the ES-7 on a desk or table with enough working space to avoid applying excessive force to the cables connecting the AU board to the audio connector panel.

- 3** Remove the cables connecting the AU board to the audio connector panel.

- 4** Install the MY board of ESBK-7021 or ESBK-7023 in motherboard slot 8, the slot located just above the AU board slot.

- 5** Repeat steps 1 through 3 in reverse to return the AU board and audio connector panel to their original positions.

For the positions of the motherboard slots for the following boards, see page 77.

### ESBK-7021 Basic DME Switcher Board or ESBK-7023 Advanced DME Switcher Board

Install the two boards of the ESBK-7021/7023 in the motherboard slots shown below.

Board name	Position
FM board	Motherboard slot 7
MY board	Motherboard slot 8

#### Installation Notes

- When installing the ESBK-7022/7024 3D Effect Board together with the DME switcher board, mount the 3D Effect Board on the MY board of the DME switcher board before installing the DME switcher board in the motherboard slot.

For installation of the 3D effect boards, see "Installing the ESBK-7022 3D Effect Board for Basic DME Switcher" (page 82), or "Installing the ESBK-7024 3D Effect Board for Advanced DME Switcher" (page 83).

- The motherboard slot for the MY board is located behind the audio connector panel. The audio connector panel must be removed before installing the board.

For installation of the MY board, see "Installing the ESBK-7021/7023 MY board" (page 80).

### ESBK-7025 External Switcher Interface Board

Install the two boards of the ESBK-7025 in the positions shown below.

Board name	Position
DAC board	On the video output (DA) board
IF board	Motherboard slot 7

For more information about installing the DAC board, see "Installing the adapter board (DAC) supplied with ESBK-7071 ESDraw" (page 85).

#### Note

If ESDraw and the ESBK-7071 DAC board are already installed, you do not need to install the DAC board on the external switcher video output (DA) board.

### ESBK-7041 Disk Recorder Board

Install the two boards of the ESBK-7041 in the motherboard slots shown below.

Board name	Position
MPU board	Motherboard slot 2
RP board	Motherboard slot 3

### ESBK-7031 QSDI Interface Board

Install the ESBK-7031 QSDI Interface Board in motherboard slot 4.

#### Note

When installing both the ESBK-7031 and the ESBK-7032 SDI Interface Board, mount the SDI Interface Board on the IO board before installing the ESBK-7031 in the motherboard slot.

For more information about installing the ESBK-7032, see "Installing the ESBK-7032 SDI Interface Board" (page 84).

## Installing Optional Boards

### Installing the ESBK-7022 3D Effect Board for Basic DME Switcher

Proceed as follows to install the ESBK-7022 board on the MY-74 board of the ESBK-7021 Basic DME Switcher Board. (The MY-74 board is the board without a connector panel.)

- Press the ESBK-7022 board down onto the MY-74 board until the two connectors on the ESBK-7022 are firmly seated in the two connectors on the MY-74 board.

- Using the supplied screws, fasten the ESBK-7022 board to the MY-74 board.

- Remove the connector panel of the FM-43 board of the ESBK-7021.

- 4** Insert the two ROMs (IC5 and IC6) supplied with the ESBK-7022 into the sockets of the FM-43 board of the ESBK-7021 board. When inserting, align the notches on the ROMs with the notches in the sockets. After inserting the ROMs, attach the connector panel of the FM-43 board in its original position.

### Installing the ESBK-7024 3D Effect Board for Advanced DME Switcher

Proceed as follows to install the ESBK-7024 board on the MY-75 board of the ESBK-7023 Advanced DME Switcher Board. (The MY-75 board is the board without a connector panel.)

- 1** Press the ESBK-7024 board down onto the MY-75 board until the three connectors on the ESBK-7024 are firmly seated in the three connectors on the MY-75 board.

- 2** Using the supplied screws, fasten the ESBK-7024 board to the MY-75 board.

## Installing Optional Boards

### Installing the ESBK-7032 SDI Interface Board

Proceed as follows to install the ESBK-7032 board on the ESBK-7031 QSDI Interface Board.

- 1** Press the ESBK-7032 board down onto the ESBK-7031 board until the two connectors on the ESBK-7032 are firmly seated in the two connectors on the ESBK-7031 board.

- 2** Using the supplied screws, fasten the ESBK-7032 board to the ESBK-7031 board.

- 3** Using the coaxial cables supplied with the ESBK-7032, connect the SDI input and output connectors on the ESBK-7031 connector panel to the mini BNC connectors on the ESBK-7032 board.

Connect to the destinations shown in the illustration.

### Installing the adapter board (DAC) supplied with ESBK-7071 ESDraw

An adapter board (DAC) is supplied with the ESBK-7071 ESDraw drawing software. Install this board on the video signal output board.

- 1 Remove the video signal output board.

- 2 Press down firmly until the connectors of the DAC board are completely seated in the connectors of the video signal output board.

- 3 Using the supplied screws, fasten the DAC adapter board to the video signal output board.

### Installing Optional Boards

Proceed as follows to install the following optional expansion boards in the ISA slots of the ES-7.

- ESBK-7051 SCSI Option
- ESBK-7052 Ethernet Option

- 1 Remove the cover of the ES-7 main unit.

- 2 Remove the slot cover screw and remove the slot cover.

- 3 Press the expansion board down firmly into the specified slot, and fasten with the screw removed in step 2.

- 4 Replace the cover of the ES-7 main unit.

- 5 Refer to the operation manual of the expansion board and install the required driver software.

## Connectable Video and Audio Equipment

The ES-7 can use status signals sent from video and audio equipment connected to the remote control connectors (PLAYER 1, PLAYER 2, RECORDER, AUX) of the rear panel system control section to automatically detect the device type of the connected

equipment, and control the operation of the connected equipment using device constants for the detected device types. The ES-7 has built-in device constants for the following video and audio equipment.

Equipment type	Model
8mm VCR	EVO-9850/9850P
S-VHS VCR	SVO-5800/5900P, SVP-5600/5600P
Betacam VCR	BVW-50/50P/60/60P/85/85P/70/70P/75/75P/D285/D75/D75PS, UVW-1600/1600P/1700G/1700GP/1800/1800P, PVW-2600/2600P/2650/2650P/2800/2800P
U-matic VCR	BVU-900/900P/920/950/950P, VO-9800/9800P/9850/9850P
4:2:2 component digital (D1) VCR	DVR-1000 (525)/1000 (625)/2100 (525)/2100 (625)
1-inch VTR	BVH-3000/3000PS/3100/3100PS
Digital Betacam VCR	DVW-500/500P/A500/A500P/510/510P/A510/A510P
DVCAM VCR	DSR-85/85P/80/80P/60/60P
DAT recorder	PCM-7030/7050
CD player	CDP-3100

## Setting the Video Signal Format

After connecting the VCRs and other peripheral equipment in your system, use the EditStation Settings menu to set their video signal formats.

- 1 Log on and start EditStation using the procedures explained in "Starting the System" (page 17) and "Starting EditStation" (page 30).

The EditStation initial screen appears.

- 2 Make the Clip Bin window the active window and select Device from the Setting menu.

The Device dialog box appears.

- 3 Click the tab for the VCR whose signal format you want to set.

- 4 Click the button for Video Format.

A list of video formats appears. Click the or scroll button to scroll the list and display other formats.

- 5 Select the desired video signal format from the list and click it.

The selected format is highlighted in the list box.

- 6 Click the OK button.

This completes the selection of the video signal format. You can begin editing with the selected format.

For more information about the other items in the Settings menu, see the online manual.

## Setting the Date and Time

Whenever you save data with this unit, the current date and time are saved together with the data. The correct date and time are not set when the unit is shipped from the factory, so ■ sure to carry out the following procedure to set the date and time before saving your data.

- 1 In the Program Manager window, double click the Main icon ■ open the Main group, and double click the Control Panel icon.

The Control Panel window opens.

- 2 In the Control Panel window, double click the Date/Time icon.

The Date/Time dialog box opens.

- 3 Set the date and time, and click the OK button.

When the dialog box opens, the month is highlighted. Set the month and press the TAB key to move to the next item. Continue by making the correct setting and pressing the TAB key to move to the next item in the order Date, Time Zone, Daylight Saving Time Adjustment and Time. To return to the previous item, press the TAB key while holding down the Shift key. When finished, click the OK button to save the changes and close the Date/Time dialog box.

- 4 ■ the Control Panel window, double click the ■ button in the upper left corner to close the Control Panel window.

- 5 In the Main window, double click the ■ button to close the Main window.

## Reinstalling the Software

If the EditStation software fails to operate because of corrupt program files, reinstall the software using the following procedure.

- 1 Log on using the procedure explained in "Starting the System" (page 17).

The Program Manager window appears.

- 2 Insert the supplied CD-ROM disc.

For more information about inserting CD-ROM discs, see "Inserting and removing CD-ROM Discs" (page 68).

- 3 Select Run from the File menu.

The following dialog box appears.

- 4 Enter "D:\SETUP.EXE" on the command line and click the OK button.

The setup program starts. Follow the instructions displayed on the screen.

- 5 When the installation of the software is complete, press the CD-ROM EJECT button to remove the CD-ROM disc.

## Registering User Names and Passwords

You can register users and passwords to prevent persons who do not have user names and passwords from using the system.

The following operations can be performed by users who belong to the Administrators group or the Power Users group. Users who log on using the factory default configuration (user name: "Creator"; password: none), belong to the Administrators group.

For more information about user groups, refer to the "User Manager" section in the *Windows NT Workstation System Guide*.

To register user names and passwords, proceed as follows.

- 1 Log on using the procedure explained in "Starting the System" (page 17).

The Program Manager window appears.

- 2 Double click the Administrative Tools group icon.

A group window like the one below opens.

- 3 Double click the User Manager icon.

The User Manager window opens.

- 4 Select New User from the User menu.

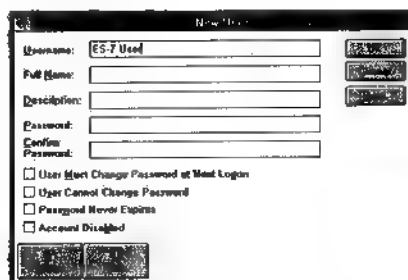

The New User dialog box appears.

- 5 Enter a user name in the Username field.

User names can be up to 20 characters long. You can use any combination of uppercase and lowercase letters and any other characters except the following:

" \ / [ ] ; | = , + \* ? < >

You cannot assign a user name that has already been registered.

- 6 Enter a password in the Password field and the Confirm Password field.

Passwords can be up to 14 characters long. Uppercase letters are distinguished from lowercase letters.

(Continued)

## Registering User Names and Passwords

- 7 Click the Groups button.

A Group Memberships dialog box like the one below appears.

- 8 From the Not member of list, select the Administrators, highlighting it, and click the Add button.

The Administrators is added to the Member of list.

- 9 Click the OK button.

The Group Memberships dialog box closes.

- 10 Click the OK button of the New User dialog box.

The New User dialog box closes. The user name that you just registered is displayed in the Username list of the User Manager window.

- 11 Select Exit from the User menu.

The User Manager window closes.

## Executing the Self Diagnostics

The ES-7 has a self-diagnostics function that helps you to locate the cause of the problem when trouble occurs in the system.

Technical service will be able to assist you more rapidly if you report the results of self diagnostics when requesting repairs for the system.

This section will explain the basics of using the self diagnostics function.

For more detailed information, refer to the online manual.

Proceed as follows to execute the self diagnostics.

- 1 Log on using the procedure explained in "Starting the System" (page 17).

The Program Manager window appears.

- 2 Click the SelfDiag icon in the Sony EditStation group.

The initial screen of the self diagnostics software appears.

- 3 Click the System Check button.

The self diagnostics start, and the operation of each block in the system is checked.

If any errors are discovered by the self diagnostics, they are recorded in an error log<sup>1)</sup>.

### To check a specific block

In the initial screen of the self diagnostics software, click the button for the block you want to check.

### To view the error log

In the initial screen of the self diagnostics software, click the Error Log button.

For information about the contents of the error log, refer to the online manual.

1-45

- 1) A file that records the date and time of the self diagnostics and the error status of each block.

## Pin Assignments

### GPI (Parallel) connector

To connect external equipment to the GPI connectors on the rear panel of the ES-7, attach the supplied GPI connectors to the connection cables.

The GPI pin assignments on the ES-7 side are as follows.

### GPI (PARALLEL) connector

Pin no.	Signal
1	TTL1 OUT
2	RELAY1
3	RETURN1
4	TTL3 OUT
5	GND
6	TTL2 OUT
7	RELAY2
8	RETURN2
9	TTL4 OUT

### GPI (232) connector

Pin no.	Signal
1	N.C.
2	GPI RXD IN
3	GPI TXD OUT
4	(DTR)
5	SIGNAL GND
6	(DSR)
7	(RTS)
8	(CTS)
9	N.C.

Pins 4 and 6 are connected internally.

Pins 7 and 8 are connected internally.

### PRINTER connector

Pin no.	Signal	Pin no.	Signal
1	STROBE	10	ACKNLG
2	DATA1	11	BUSY
3	DATA2	12	PE
4	DATA3	13	SLCT
5	DATA4	14	AUTOFD
6	DATA5	15	ERROR
7	DATA6	16	INIT
8	DATA7	17	SLCTIN
9	DATA8	18 to 25	GND

### COM 1 and COM 2 connectors

Pin no.	Signal
1	CD
2	RD
3	TD
4	ER
5	SG
6	DR
7	RS
8	CS
9	RI

**DISPLAY MONITOR connector**

Pin no.	Signal
1	Red Video
2	Green Video
3	Blue Video
4	Not Used
5	Ground
6	Red Return
7	Green Return
8	Blue Return
9	No Connection
10	Sync Return
11	Not Used
12	Not Used
13	Horizontal Sync
14	Vertical Sync
15	Not Used

**Front Panel****1 POWER switch**

Turns the power on and off. Be sure to carry out the Windows NT shutdown procedure before turning the power off.

For the Windows NT shutdown procedure, see "Shutting Down the System" (page 26).

**2 CD-ROM access indicator**

Normally lights in green, and lights in orange to indicate that the unit is reading from a CD-ROM disc.

**3 CD-ROM tray cover**

This is the cover of the tray where CD-ROM discs are placed.

**4 CD-ROM EJECT button**

Press this button to open the CD-ROM tray to insert or remove a disc. To close the tray, push it in.

**5 Floppy disk access indicator**

Lights to indicate that the unit is writing to or reading from a floppy disk.

**6 Floppy disk insertion slot**

Insert 3.5-inch floppy disks here.

**7 Floppy disk EJECT button**

Press to eject a floppy disk.

**Note**

Do not press this button while the floppy disk access indicator is lit.

**8 HEADPHONES knob**

Controls the volume of the headphones connected to the headphones connector 9.

**9 Headphones connector (stereo phone jack)**

Connect headphones. This connector outputs the same signals as the MONITOR OUTPUT 1/3, 2/4 connectors on the rear panel.

## Rear Panel

### Cooling fans

These provide air circulation and prevent temperatures from rising inside the unit.

### Note

When installing the unit, be sure not to block the vents of the cooling fans.

### Breaker

Excessive current flows in the internal circuits trip this breaker, shutting off the power supply. If this occurs, contact your Sony dealer or Sony service representative.

### AC IN connector

Connect the supplied AC power cord.

### Signal ground terminal

Connect to the ground terminal of a rack or other equipment.

## 1 Black burst output section

### B B OUT 1 to 4 (black burst output signal 1 to 4) connectors (BNC type)

Output black burst signals generated by the built-in sync signal generator. The same signals are output from all 4 connectors. Connect these signals to the reference video input connectors (REF. VIDEO IN, GENLOCK IN, SYNC IN, etc.) of your source VCRs to synchronize the source VCRs and this unit.

## 2 Computer connection section

### PRINTER connector (D-sub 25-pin)

Connect a printer to print edit data. Connect a printer equipped with a Centronics compatible interface. Printer driver software is required to control the printer. For details refer to the operating instructions of your printer and the descriptions of the Print Manager in your Windows NT manual.

### COM 1 (serial COM port 1) connector (D-sub 9-pin)

Connect a tablet for use as a drawing input device.

### COM 2 (serial COM port 2) connector (D-sub 9-pin)

Connect an external computer or modem. Use to exchange data with external equipment over the RS-232C interface.

### KEYBOARD connector (mini DIN 6-pin)

Connect the supplied keyboard.

### MOUSE connector (mini DIN 6-pin)

Connect the supplied mouse.

### DISPLAY MONITOR connector (D-sub 15-pin)

Connect an optional computer monitor. Connect a monitor that supports a vertical refresh rate of 75 Hz at a resolution of 1024 x 768 pixels.

### ETHERNET connector (option)

This connector is attached to the ESBK-7052 Ethernet Option board. Connect an Ethernet cable to exchange graphics and edit data with other equipment over an Ethernet network.

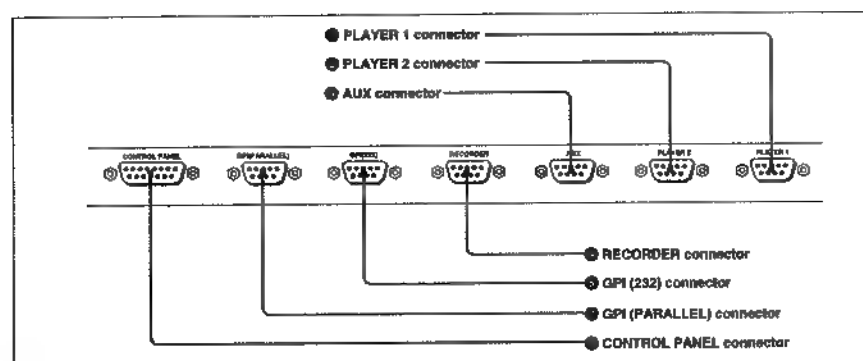

## Rear Panel

### ● SCSI connector (option)

This connector is attached to the ESBK-7051 SCSI Option board. It allows you to connect an MO drive. The MO drive is used to store edit data with index pictures, and to exchange edit data with other equipment.

### 3 System control section

#### ● PLAYER 1 connector (D-sub 9-pin)

Outputs control signals for the player 1 VCR. Connect to the REMOTE connector of the player 1 VCR.

#### ● PLAYER 2 connector (D-sub 9-pin)

Outputs control signals for the player 2 VCR. Connect to the REMOTE connector of the player 2 VCR.

#### ● AUX (auxiliary) connector (D-sub 9-pin)

Outputs control signals for an auxiliary VCR. Connect to the REMOTE connector of the VCR connected to the AUX connector.

#### ● RECORDER connector (D-sub 9-pin)

Outputs control signals for the recorder VCR. Connect to the REMOTE connector of the recorder VCR.

#### ● GPI (232) connector (D-sub 9-pin)

Outputs commands to control external equipment. This connector complies with the RS 323C standard.

See page 94 for the pin assignments.

#### ● GPI (PARALLEL) connector (D-sub 9-pin)

Outputs timing pulses to control external equipment. Connect to the GPI input connector of the external equipment. There are 4 ports. The signals output by the 4 ports are as follows.

Ports 1, 2: TTL output and relay output  
Ports 3, 4: TTL output

See page 94 for the pin assignments.

#### ● CONTROL PANEL connector (D-sub 15-pin)

Connect the optional ESBK-7011 Control Panel.

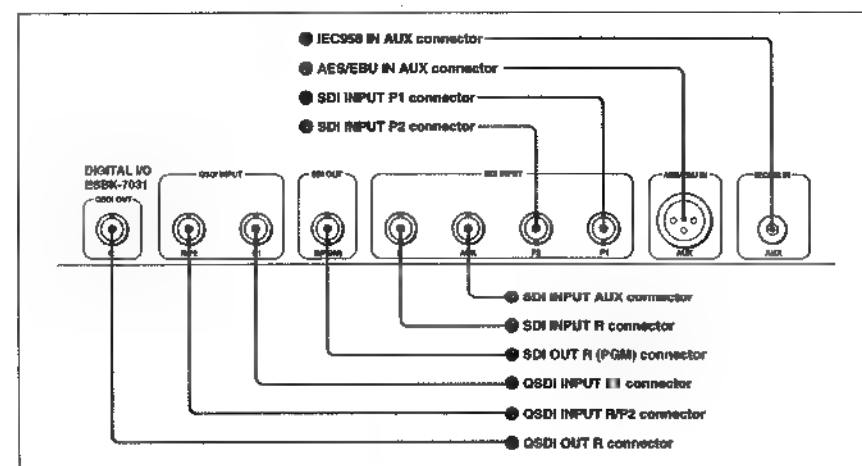

### 4 Disk recorder connection section (option)

#### SCSI 1 to 4 connectors (50-pin high-density SCSI-2, option)

Connect to the SCSI IN 1 to 4 connectors of optional ESBK-7045 Disk Units.

### 5 Digital I/O section (option)

#### ● IEC958 IN AUX (IEC958 format digital audio input) connector (IEC958 connector)

Input IEC958 format digital audio signals. Connect to the IEC958 output connector of a CD player.

#### ● AES/EBU IN AUX (AES/EBU format digital audio input) connector (XLR 3-pin)

Input AES/EBU format digital audio signals. Connect to the AES/EBU output connector of a DAT player or other audio equipment.

#### ● SDI INPUT P1 (serial digital interface player 1 input) connector (BNC type)

Input D1 format video and audio signals. Connect to the serial digital video and audio signal output connector of the VCR, when connecting a DVR-series or DVW-series VCR as player 1. When connecting a DSR-series VCR to perform linear editing with digital signals, connect to the SDI output connector of the DSR-series VCR.

## Rear Panel

● **SDI INPUT P2 (serial digital interface player 2 input) connector (BNC type)**  
Input D1 format video and audio signals. Connect ■ the serial digital video and audio signal output connector of the VCR, when connecting a DVR-series or DVW-series VCR as player 2. When connecting a DSR-series VCR to perform linear editing with digital signals, connect ■ the SDI output connector of the DSR-series VCR.

● **SDI INPUT AUX (serial digital interface auxiliary input) connector (BNC type)**  
Input D1 format video and audio signals. Connect to the serial digital video and audio signal output connector of the VCR when connecting a DVR-series or DVW-series VCR as an auxiliary VCR. When connecting a DSR-series VCR to perform linear editing with digital signals, connect to the SDI output connector of the DSR-series VCR.

● **SDI INPUT R (serial digital interface recorder input) connector (BNC type)**  
Input D1 format video and audio signals. Connect to the serial digital video and audio signal output connector of the VCR when connecting a DVR-series or DVW-series VCR as the recorder VCR. When connecting a DSR-series VCR to perform linear editing with digital signals, connect to the SDI output connector of the DSR-series VCR.

● **SDI OUT II (PGM) (serial digital interface recorder (program) output) connector (BNC type)**  
Output D1 format video and audio signals to the recorder. Connect to the serial digital video and audio signal input connector of the VCR when using a DVR-series or DVW-series VCR as the recorder.

● **QSDI INPUT P1 (quarter-inch serial digital interface player 1 input) connector (BNC type)**  
Input QSDI format video and audio signals. Connect to the QSDI output connector of the VCR when using a DSR-series VCR as player 1.

● **QSDI INPUT R/P2 (quarter-inch serial digital interface recorder/player 2 input) connector (BNC type)**  
Input QSDI format video and audio signals. Use for uploading in non-linear editing. Connect to the QSDI output connector of the VCR when using a DSR-series VCR as the recorder or player 2.

● **QSDI OUT R (quarter-inch serial digital interface recorder output) connector (BNC type)**  
Output QSDI format video and audio signals to the recorder. Use to download edit results and for backup recording. Connect to the QSDI input connector of the VCR when using a DSR-series VCR as the recorder. When using a DSR-series VCR on the player side only in non-linear editing, connect to the QSDI input connector of the DSR-series VCR for backup recording.

## 8 Video signal I/O section

When the component video input and output connectors of a connected VCR are multi-connectors, connect with a cable having a 12-pin multi-connector on one end and 3, 4, or 5 BNC connectors on the other end. For more information about these cables, contact your Sony dealer or Sony service representative.

Depending on the utilized connectors, an EditStation software setting may be required to specify the input signal format. For details, see "Setting the Video Signal Format" (page 88).

● **PLAYER 1 INPUT connectors**  
Input video signals from an external VCR. Connect to the video signal output connectors of the player 1 VCR.

**S VIDEO connector (mini DIN 4-pin):** Connect to the S-video output connector of the player 1 VCR.  
**Y/COMP (composite) connector (BNC type):** Connect to the Y output connector or the composite video output connector of the player 1 VCR. Specify whether to input Y signals or composite signals by an EditStation software setting.

**R-Y connector (BNC type):** Connect to the R-Y output connector of the player 1 VCR.

**B-Y connector (BNC type):** Connect to the B-Y output connector of the player 1 VCR.

● **PLAYER 2 INPUT connectors**  
Input video signals from an external VCR. Connect to the video signal output connectors of the player 2 VCR.

**S VIDEO connector (mini DIN 4-pin):** Connect to the S-video output connector of the player 2 VCR.  
**Y/COMP (composite) connector (BNC type):** Connect ■ the Y output connector or the composite video output connector of the player 2 VCR. Specify whether to input Y signals or composite signals by an EditStation software setting.

**R-Y connector (BNC type):** Connect to the R-Y output connector of the player 2 VCR.

**B-Y connector (BNC type):** Connect to the B-Y output connector of the player 2 VCR.

## Rear Panel

### ● AUX INPUT (auxiliary input) connectors

Input video signals from an external VCR. Connect to the video signal output connectors of auxiliary video equipment.

**Y/G connector (BNC type):** Connect to the Y output connector, composite video output connector, or G output connector of auxiliary video equipment. Specify whether to input Y signals, composite signals, or G signals by an EditStation software setting.

**R-Y/R connector (BNC type):** Connect to the R-Y or R output connector of auxiliary video equipment.

**B-Y/B connector (BNC type):** Connect to the B-Y or B output connector of auxiliary video equipment.

**SYNC connector (BNC type):** Connect to the reference video signal output connector of auxiliary video equipment (in RGBS mode only).

### ● RECORDER INPUT connectors

Input video signals from an external recorder VCR. Connect to the video signal output connectors of the recorder VCR.

**S VIDEO connector (mini DIN 4-pin):** Connect to the S-video output connector of the recorder VCR.

**Y/COMP (composite) connector (BNC type):** Connect to the Y output connector or the composite video output connector of the recorder VCR. Specify whether to input Y signals or composite signals by an EditStation software setting.

**R-Y connector (BNC type):** Connect to the R-Y output connector of the recorder VCR.

**B-Y connector (BNC type):** Connect to the B-Y output connector of the recorder VCR.

### ● PROGRAM OUTPUT connectors

Output the video signals recorded by the recorder. Connect to the video input connector of the video equipment used as the recorder or of a video monitor.

**S VIDEO connector (mini DIN 4-pin):** Connect to the S-video input connector of the recorder.

**VIDEO 1, 2 connectors (BNC type):** Connect to the composite video input connectors of the recorder or video monitor.

**Y/G connector (BNC type):** Connect to the Y input connector or the G input connector of the recorder. Specify whether to output Y signals or G signals by an EditStation software setting.

**R-Y/R connector (BNC type):** Connect to the R-Y input connector or the R input connector of the recorder. Specify whether to output R-Y signals or R signals by an EditStation software setting.

**B-Y/B connector (BNC type):** Connect to the B-Y input connector or the B input connector of the recorder. Specify whether to output B-Y signals or B signals by an EditStation software setting.

**SYNC connector (BNC type):** Output sync signals generated by the built-in sync signal generator. Connect to the reference video input connector of the recorder only when you output signals from this unit to the recorder in RGBS mode.

### ● MONITOR OUTPUT connectors

Output the video signals of the VCR selected automatically by this unit during a preview, recording, or playback. At other times, output the video signals of the VCR selected with this unit as the source VCR. Connect composite or S-video output to the video input connector of the preview monitor. Normally, connect composite video output to the preview monitor to check video output. When you want to check video output with high video quality, connect Y/R-Y/B-Y component signal output or RGB output to a program monitor.

**S VIDEO connector (mini DIN 4-pin):** Connect to the S-video input connector of a video monitor.

**VIDEO connector (BNC type):** Connect to the composite video input connectors of a video monitor. Timecode and other status information is superimposed on the video output from this connector.

**Y/G connector (BNC type):** Connect to the Y input connector or the G input connector of a video monitor. Specify whether to output Y signals or G signals by an EditStation software setting.

**R-Y/R connector (BNC type):** Connect to the R-Y input connector or the R input connector of a video monitor. Specify whether to output R-Y signals or R signals by an EditStation software setting.

**B-Y/B connector (BNC type):** Connect to the B-Y input connector or the B input connector of a video monitor. Specify whether to output B-Y signals or B signals by an EditStation software setting.

**SYNC connector (BNC type):** Output sync signals generated by the built-in sync signal generator. Connect to the reference video input connector of a video monitor only when you output signals from this unit to the video monitor in RGBS mode.

### ● MON IN connector

Input composite video signals for the built-in monitor switcher. Connect to the composite video output connector of the recorder VCR.

### ● GEN LOCK IN connector

Input an external reference video signal. Use a T connector for a through connection not terminated at this unit.

### ● 75Ω ON/OFF switch

Specify whether or not to terminate with a 75Ω terminator the external reference video signal input to the GEN LOCK IN connector ●.

ON: Terminate.

OFF: Do not terminate.

## 7 DME switcher section (option)

### DFS connector (D-sub 9-PIN)

Outputs signals to control an external DME switcher. Connect to the EDITOR connector of the DFS-300/300P/500/500P.

#### Note

When connecting the ES-7 and the DFS-300/300P/500/500P, set the editor selection switch on the system control board of the DFS-300/300P/500/500P as follows.

DFS-300/300P: PVE-500

DFS-500/500P: BVE-900

### About the ROM version number of the DFS-500/500P

To connect a DFS-500/500P switcher to this unit, the version of the ROM on the SY board of the DFS-500/500P must be 1.04 or higher. The following DFS-500/500P switchers meet this requirement.

- DFS-500 with serial number 12000 or higher
- DFS-500P with serial number 24000 or higher
- DFS-500 with BKDF-504/504P installed

To connect a DFS-500/500P other than those listed above, a ROM update is required. For details, contact your Sony dealer or a Sony service representative.

## Rear Panel

### Audio signal I/O section

#### ● PLAYER 1 INPUT 1 to 4 connectors (XLR 3-pin)

Input analog audio signals from external equipment. Connect to the audio channel 1 to 4 output connectors of the player 1 VCR.

#### ● PLAYER 2 INPUT 1 to 4 connectors (XLR 3-pin)

Input analog audio signals from external equipment. Connect to the audio channel 1 to 4 output connectors of the player 2 VCR.

#### ● AUX INPUT (auxiliary input) 1 to 2 connectors (XLR 3-pin)

Input analog audio signals from external equipment. Connect to the audio channel 1 to 2 output connectors of auxiliary audio equipment.

#### ● MONITOR OUTPUT connectors (phono jack)

Output the analog audio signals of the equipment currently selected as the source by this unit. Connect to the audio input connectors of the audio amplifier used as a monitor. Specify output of channels 1/2 or channels 3/4 by an EditStation software setting.

*Refer to the online manual for details about the software setting.*

**White connector:** channel 1 or channel 3  
**Red connector:** channel 2 or channel 4

#### ● RECORDER INPUT 1 to 4 connectors (XLR 3-pin)

Input analog audio signals from external equipment. Connect to the audio channel 1 to 4 input connectors of the recorder VCR.

#### ● LINE OUTPUT connectors (XLR 3-pin)

Output the analog audio signals recorded by the recorder. Connect to the audio channel 1 to 4 input connectors of the recorder VCR.

## Error Messages

The EditStation displays an error message when a problem occurs.

The meaning of the error messages and the steps to take to correct the problem are as follows. If the

problem persists after you have taken the steps indicated below, contact your Sony dealer or Sony service representative.

Message	Meaning	Steps to Take
Couldn't initialize graphics device.	A graphics device initialization error occurred.	Shut the system down and launch EditStation again after restarting the system.
MARK IN necessary.	An IN point setting is required.	Click the MARK IN button to set an IN point.
MARK OUT necessary.	An OUT point setting is required.	Click the MARK OUT button to set an OUT point.
Delete all clips?	An operation that will delete all clips is about to be performed.	If you really want to delete all clips, click the Yes button. Otherwise click the No button.
Can't close device.	A graphics board access error occurred.	Shut the system down and launch EditStation again after restarting the system.
Can't get pixel clock. Check cable between graphics board and PC.	The cable between the graphics board and PC may be loose.	Check the cable connection on the VPR board. For the location of the VPR board, see page 77.
Can't open device. Check whether other process is using graphics board.	A graphics board access error occurred.	Shut the system down and launch EditStation again after restarting the system.
Mismatch between Device ID and DLL. Use correct DLL.	A graphics board access error occurred.	Shut the system down and launch EditStation again after restarting the system.
Invalid mode.	A graphics board access error occurred.	Shut the system down and launch EditStation again after restarting the system.
Can't map physical memory.	A graphics board access error occurred.	Shut the system down and launch EditStation again after restarting the system.
Can't unmap physical memory.	A graphics board access error occurred.	Shut the system down and launch EditStation again after restarting the system.

## Precautions

### Maintaining the Performance of this Unit

#### Operating and storage conditions

Avoid using or storing the unit in places which are:

- very hot or cold
- damp or dusty
- subject to severe vibrations
- near equipment generating strong electromagnetic currents
- near television or radio transmitting stations or sources of strong radio waves
- subject to severe interference

#### Maintenance of this unit

Clean the cabinet, panels, keyboard, and mouse by wiping with a soft, dry cloth. Remove severe stains by wiping with a cloth moistened with a neutral solvent, then wipe dry with a soft, dry cloth. Do not clean with alcohol, benzene, thinner, or other volatile liquids. Doing so may damage the finish.

#### Cleaning the mouse ball

When the ball inside the mouse becomes dirty, remove the ball as shown in the illustration and clean by wiping with a cloth that has been soaked with a neutral solvent. Before cleaning wring the cloth well to remove excess solvent. After cleaning, wipe the ball dry with a soft, dry cloth.

### Protecting Data on the Hard Disk

The ES-7 EditStation is equipped with an internal hard disk. Observe the following precautions to protect the data on the internal hard disk.

- Do not install the unit in an unstable location or where it will be subject to vibrations.
- Never move the unit while it is powered on.
- Make periodic backups of the data on the internal hard disk. Data on the hard disk cannot be recovered if it is lost because of accidents or hardware malfunctions.

### Handling CD-ROM Discs

The EditStation is supplied with a CD-ROM disc containing software and an online manual. If proper care is not exercised when handling the CD-ROM disc, the data may become unreadable or other errors may occur. Observe the following precautions when handling the CD-ROM disc.

#### CD-ROM disc handling precautions

- Do not touch the disc surface directly with your hands. Hold the disc by the edge and do not touch the data surface.

- Do not attach paper notes or stickers to the disc surface.
- Be careful not to drop the disc. Protect it from severe shocks.
- Always store the disc in its case to protect the valuable data it contains.
- Do not store the disc in places which are damp, dusty, exposed to direct sunlight, or near heaters.
- Never place the CD-ROM disc on the dashboard or tray of a car.

### Cleaning CD-ROM discs

Dust and fingerprints on the disc surface can result in read errors. Clean the disc by wiping lightly from the center out with a soft, dry cloth.

To remove severe stains, soak a cloth in a neutral solvent, wring the cloth well to remove excess solvent, and wipe the disc lightly. After cleaning, wipe the disc dry with a soft, dry cloth.

Do not clean with benzene, record cleaner or anti-static spray. Doing so may damage the disc.

### Usable CD-ROM discs

When playing compact discs in this unit's built-in CD-ROM drive, use discs with the follow mark.

The EditStation uses floppy disks to store EDL data. Software upgrades may also be provided on floppy disks. Observe the following precautions when handling floppy disks.

#### Floppy disk handling precautions

Floppy disks are a convenient and easy to handle, but certain precautions are required to protect the data on the disk.

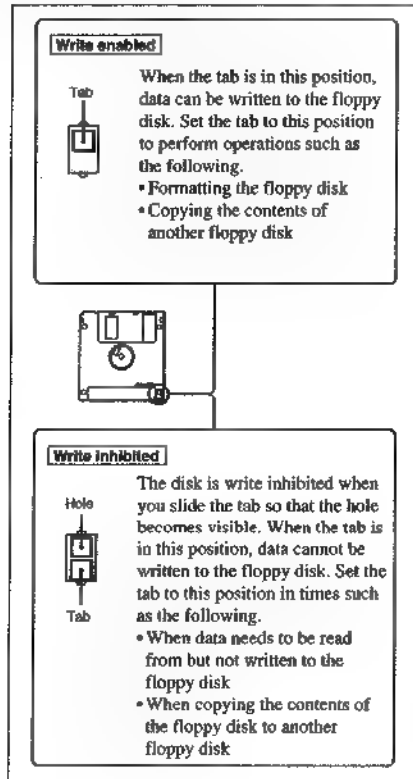

- Do not open the shutter by hand or touch the surface of the disk media. Data errors can result from dirt or scratches on the disk surface.
- Keep floppy disks away from televisions, speakers, and other sources of magnetism. The contents of the disk can be erased by magnets.
- Do not leave floppy disks near heaters or in locations exposed to direct sunlight. Excessive heat can deform the disk and render it unusable.
- Do not leave floppy disks near ashtrays or cups filled with liquid. Data errors can result from dust or liquids that contact the disk surface.
- To protect the data on floppy disks, store them in a case or other safe place.

## Precautions

### To protect floppy disk data

Floppy disks have a write inhibit tab to prevent inadvertent erasure of valuable data. You can slide the tab up and down to enable or inhibit recording of data on the floppy disk.

### Backing up floppy disk data

When handled properly, floppy disks will not lose their data. Nevertheless, it is wise to make backup copies of disks containing valuable data.

## Menu Reference

The following list shows all of the menus in the EditStation editing software. Refer to the online manual for more information about specific menu items.

### File menu

Menu item	Function
New	Create a new project file.
Open	Open an existing project file.
Save	Save the currently open project file, overwriting the previous version.
Save As	Save the currently open project in a new file. Specify a new file name, different from the current file name, and save the current project under the new file name.
Close	Close the currently open project file.
(Display Project File Names)	List of the most recently used project files.
Exit	Exit the EditStation editing software.

### Edit menu

Menu item	Function
Cut	Delete the currently selected clip and transfer it to the Clipboard.
Copy	Copy the currently selected clip to the Clipboard.
Paste	Paste the contents of the Clipboard to the currently selected position.
Delete	Delete the currently selected clip.
Select All	Select all clips.

### View menu

Menu item	Function
Picture	Display a clip in picture format.
Text	Display a clip in text format.

### Clip menu

Menu item	Function
Video Clip Editor	Start the Video Clip Editor.
Color Clip Editor	Start the Color Clip Editor.
Title Clip Editor	Start the Title Clip Editor.
GPI Clip Editor	PGPI: Start the PGPI Clip Editor. SPGI: Start the SPGI Clip Editor.
Search	Search for a clip.
ClipLink	Read clip link information from a DSR-series VCR into the EditStation.
Upload to Disk Recorder	All: Copy all clips from the VCR to the disk recorder. Selected: Copy the selected clip from the VCR to the disk recorder.

### Tools menu

Menu item	Function
Create Master Tape	Record black burst and lincode signals on a blank tape.
Backup	Backup to VTR: Save the entire contents of the disk recorder to tape. Restore to Disk Recorder: Restore the contents of the disk recorder by copying backup video and audio data from tape.
Open Recycle Box	Open the Recycle Box window.
Clear Recycle Box	Delete all clips in the Recycle Box window.
Text Composer	Start Text Composer.

### Settings menu

Menu item	Function
Device	Specify the video signal format and other settings for connected VCRs.
Control Panel	Assign specific functions to knobs and buttons on the control panel.
Options	Specify the extra duration before and after clips, and make settings for clip links and uploading to the disk recorder.

## Menu Reference

### Window menu

Menu Item	Function
New Clip Bin Windows	Create a new Clip Bin window.
Cascade	Arrange windows so that their title bars are visible.
Tile Horizontally	Arrange windows without overlap so that each window is wider than it is long.
Tile Vertically	Arrange windows without overlap so that each window is longer than it is wide.
Close	Close the active window.
Display Window Names	Display the names of the currently open windows.

### Help menu

Menu Item	Function
Contents	Display the contents of the online manual.
Search	Display help topics associated with a key word.
How to Use Help	Display information about using Help.
Technical Support	Display support information.
About EditStation ES-7	Display the EditStation version number.

**When the Timeline Window is the Active Window**

### File menu

Menu Item	Function
New	Create a new project file.
Open	Open an existing project file.
Save	Save the currently open project file, overwriting the previous version.
Save As	Save the currently open project in a new file. Specify a new file name, different from the current file name, and save the current project under the new file name.
Close	Close the currently open project file.
Load EDL	Read an EDL file.
Dump EDL	Save an EDL file.
(Display Project File Names)	List of the most recently used project files.
Exit	Exit the EditStation editing software.

### Edit menu

Menu Item	Function
Undo	Undo the immediately preceding operation on a clip.
Redo	Redo the last undone operation.
Cut	Delete what is currently selected and transfer it to the Clipboard.
Copy	Copy what is currently selected to the Clipboard.
Paste	Paste the contents of the Clipboard to the currently selected position.
Delete	Deletes what is currently selected.
Select All	Select all that can be treated in an editing operation.
Toggle Marker	Set a marker on the timeline, or clear a marker that has been set on the timeline.
Next Marker	Go to the next marker on the timeline.
Previous Marker	Go to the previous marker on the timeline.
Clear All Markers	Clear all markers on the timeline.
Insert Clips	Insert the currently selected clip in the timeline.
Jump to Clip Edge	Jump to the edge of the currently selected edit.
Trim Editor	Trim the currently selected edit.

### View menu

Menu Item	Function
Storyboard	Display a clip as an 80 x 80 pixel picture on the storyboard.
Clip on Track	Display a clip on a timeline track in picture format.
Text on Track	Display a clip on a timeline track in text format.
Track Map	Select the timeline tracks to display.
Magnification	Set the zoom ratio for the timelines.

### Execute menu

Menu Item	Function
ALL-STOP	Stop all VCRs.
Preview	Conduct a preview before recording.
Rec	Record the edit results on tape.
Review	Review the edit results recorded on tape.
Timeline Play	<b>Play +:</b> Play back the edit on the timeline in normal direction. <b>Pause:</b> Perform a still playback of the edit on the timeline. <b>Play -:</b> Play back the edit on the timeline in reverse direction.
Set Timeline Cursor	Move the cursor on the timeline.
Set Start Time	Set the start point of the timeline.
Edit Mode	Select Assemble or Insert mode.
Protect Edit	Protect sections that have been edited so that they cannot be changed.

### Effect menu

Menu Item	Function
Select	Select a wipe, dissolve, or other effect.
Select More	Make settings for the selected effect.
User Effect	Register a user-created effect.
Audio Mixer	Make audio mixer settings.

### Tools menu

Menu Item	Function
Create Master Tape	Record black burst and timecode signals on a blank tape.
Download to VTR	Download final edit results to the recorder VCR.
Backup	<b>Backup to VTR:</b> Save the entire contents of the disk recorder to tape. <b>Restore to Disk Recorder:</b> Restore the contents of the disk recorder by copying backup video and audio data from tape.
Text Composer	Start Text Composer.
ReClip	Create a new clip from part of consecutive edits on a timeline.

### Settings menu

Menu Item	Function
Device	Specify the video signal format and other settings for connected VCRs.
Control Panel	Assign specific functions to knobs and buttons on the control panel.
Options	Make settings for preview and other functions.

### Window menu

Menu Item	Function
New Timeline Windows	Create a new Timeline window.
Cascade	Arrange windows so that their title bars are visible.
Tile Horizontally	Arrange windows without overlap so that each window is wider than it is long.
Tile Vertically	Arrange windows without overlap so that each window is longer than it is wide.
Close	Close the window.
Display Window Names	Display the names of the currently open windows.

### Help menu

Menu Item	Function
Contents	Display the contents of the online manual.
Search for Help on	Display help topics associated with a key word.
How to Use Help	Display information about using Help.
Technical Support	Display support information.
About EditStation ES-7	Display the EditStation version number.

# Specifications

## General

Signal format	NTSC (model for U.S.A. and Canada) PAL (model for other countries)
Power requirements	In U.S.A. and Canada 120 V AC, 50/60 Hz In Other countries 220/240 V AC, 50/60 Hz
Power consumption	450 W
Operating temperature	5°C to 35°C (41°F to 95°F)
Dimensions (w/h/d)	424 × 443 × 450 mm (16 1/4 × 17 1/2 × 17 3/4 inches)
Mass	40 kg (88 lb 2 oz)

## Video signal processing

Sampling method	Y:B-Y:R-Y = 4:2:2, 13.5 MHz, 8 bits
Compression method	DV compression

## Audio signal processing

Sampling Channels	48 kHz, 16 bits, linear 4
-------------------	------------------------------

## Input connectors

### Analog video input

PLAYER 1 INPUT, PLAYER 2 INPUT	Y/COMP BNC type, 75Ω, 1.0 Vp-p B-Y, R-Y BNC type, 75Ω B-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar R-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
S-VIDEO	Mini DIN 4-pin, 75Ω Y: 1.0 Vp-p C: 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)

## RECORDER INPUT

Y/COMP	BNC type, 75Ω, 1.0 Vp-p
B-Y, R-Y	BNC type, 75Ω B-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar R-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
S-VIDEO	Mini DIN 4-pin, 75Ω Y: 1.0 Vp-p C: 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)

## AUX IN

Y/G	BNC type, 75Ω Y: 1.0 Vp-p G: 0.7 Vp-p
B-Y/B	BNC type, 75Ω B-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar B: 0.7 Vp-p
R-Y/R	BNC type, 75Ω R-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar R: 0.7 Vp-p
SYNC	BNC type, 75Ω, 0.286 to 4.0 Vp-p (NTSC) or 0.3 to 4.0 Vp-p (PAL)
GEN LOCK IN	BNC type, 75Ω, 1.0 Vp-p

## Analog audio input

PLAYER 1 INPUT, PLAYER 2 INPUT, RECORDER INPUT	XLR 3-pin × 4, +4 dBm
AUX INPUT	XLR 3-pin × 2, +4 dBm

## Digital input

SDI INPUT P1, SDI INPUT P2, SDI INPUT AUX, SDI INPUT R, QSDI INPUT P1, QSDI INPUT P2/R (option)	BNC type, 75Ω, 0.8 Vp-p, bitrate 270 Mbps, with SDI audio
---	---

## AES/EBU IN AUX

XLR 3-pin	
Phono jack	

## IBC-958

## Output connectors

### Analog video output

PROGRAM OUTPUT, MONITOR OUTPUT	Y/G BNC type, 75Ω Y: 1.0 Vp-p G (with sync): 1.0 Vp-p G (without sync): 0.7 Vp-p
B-Y/B	BNC type, 75Ω B-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar B: 0.7 Vp-p
R-Y/R	BNC type, 75Ω R-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar R: 0.7 Vp-p
S VIDEO	Mini DIN 4-pin, 75Ω Y: 1.0 Vp-p C: 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)
SYNC	BNC type, 75Ω, 0.286 to 4.0 Vp-p (NTSC) or 0.3 to 4.0 Vp-p (PAL)
B B OUT	Black burst output BNC type × 4, 75Ω, 0.286 Vp-p

### Analog audio output

LINE OUTPUT	XLR 3-pin, +4 dBm
MONITOR OUTPUT	Phono jack, -10 dBm

### Digital output

SDI OUT R (PGM), QSDI OUT R (option)	BNC type, 75Ω, 0.8 Vp-p, bitrate 270 Mbps, with audio
--------------------------------------	---

## Computer connection section input and output connectors

PRINTER	D-sub 25-pin, Centronics interface
COM 1, COM 2	D-sub 9-pin, RS-232C
KEYBOARD	Mini DIN 6-pin
MOUSE	Mini DIN 6-pin
DISPLAY MONITOR	D-sub 15-pin Resolution: 1024 × 768 pixels, 65000 colors Vertical frequency: 75 Hz

## Control connectors

PLAYER 1, PLAYER 2, RECORDER, AUX	D-sub 9-pin, RS-422A
GPI (232)	D-sub 9-pin, RS-232C
GPI (PARALLEL)	D-sub 9-pin, active low TTL output LOW: 0 to 0.5 V HIGH: 3.5 to 5 V
CONTROL PANEL	D-sub 15-pin

## Laser Diode Properties

Material	Ga Al As
Wave length	780 nm
Emission duration	Continuous
Laser output power	0.6 mW (max)
Beam divergence	53.4° ±1.5°

## Supplied accessories

Power cord (1)	
Mouse (1)	
Keyboard (1)	
Extension cables for keyboard and mouse, 4 m (2)	
Parallel GPI D-sub 15-pin connector (1)	
Software and online manual (CD-ROM disc) (1)	
Windows NT package (CD-ROM disc and manuals) (1)	
Operating Instructions (1)	
Software License Agreement (1)	
User registration card (1)	

## Specifications

### Optional accessories

9-pin remote control cables RCC-5G/10G/30G (5 m/  
10 m/30 m)  
ESBK-7091E EditStation Operation Manual (Printed  
version of online manual contained in CD-ROM  
disc)

Design and specifications are subject to change  
without notice.

## Glossary

This appendix explains some important terms in video editing, including terms that are used in a special sense in this manual.

### A/B roll editing

Editing in which special effects such as wipe and dissolve are applied to the playback of two playback VCRs and recorded on a master tape by a recorder VCR.

### Dissolve

A type of transition effect in which one scene gradually fades out as another scene fades in. Also called "mix".

### Edit

In the EditStation editing software, a rectangle on a time line that represents a specific video clip in the ClipBin window. In conventional editing systems, the smallest unit of editing data, composed of a reel name, IN point, OUT point, effect type and so on.

### Edit block

A block of one or more edits, represented as a single rectangle on the Edit track of the Timeline window. When you specify an effect that involves a transition between neighboring edits, the edits are joined in a single edit block.

### EDL

Abbreviation of Edit Decision List. A list that records IN points, OUT points, effects and so on in a standard format.

### GUI

Abbreviation of Graphical User Interface. A type of user interface that uses pictures and easily understood graphical elements to represent commands and program states.

### Linear editing

Editing while playing back video and audio signals recorded on video tape.

### Non-linear editing

Editing while playing back video and audio signals recorded on hard disks. Video scenes stored on disk can be cued up quickly, for increased editing efficiency.

### Video clip

In the EditStation editing software, the smallest unit of editing data, composed of a reel name, IN point, OUT point and so on. Video clips that have been dragged to a timeline are referred to as edits.

### Wipe

A type of transition effect in which old video is wiped off the screen by new video, usually in the order defined by a geometric pattern.

## SECTION 2

### SERVICE INFORMATION

#### 2-1. INSTALLATION

##### 2-1-1. Installation

###### Power requirements:

In U.S.A. and Canada 120 V AC, 50/60 Hz

In Other countries 220/240 V AC, 50/60 Hz

Power consumption : 450W

Operating temperature : 5 °C to 35 °C (41 °F to 95 °F)

Dimension(w/h/d) : 424 × 443 × 450 mm  
(16<sup>3</sup>/<sub>4</sub> × 17<sup>1</sup>/<sub>2</sub> × 17<sup>3</sup>/<sub>4</sub> inches)

Mass : 40kg(88lb 2 oz)

###### Operating and storage conditions:

Avoid using or storing the unit in places which are:

- very hot or cold
- damp or dusty
- subject to severe vibrations
- near equipment generating strong electromagnetic currents
- near television or radio transmitting stations or sources of strong radio waves
- subject to severe interference

##### 2-1-2. RACK-MOUNTING

This unit can be mounted on an EIA Standard 19-inch rack. When mounting, be sure to use a support angle or slide rail.

###### Recommended slide rail

RMM-ES7(SONY RACK MOUNT RAIL)

The unit can be mounted easily on the 19-inch standard rack by using one RMM-ES7(SONY RACK MOUNT RAIL) for one unit.

###### • Component parts

Rail with bracket × 2

Screw(+PWH 10) × 2

Plate nut M4 × 2

Screw(+B 8) × 8

###### • Usable rack

One with a depth of 660 to 830 mm

###### • How to install

- ① Remove four feet from the bottom of the unit.

- ② Install the rack mounting rail. For details, refer to INSTALLATION MANUAL packed with the rack mounting rail RMM-ES7.

- Maximum movable length of the ES-7 is as follows.

#### In Cases When Other Than RMM-ES7 is Used:

In cases when a support angle or a slide rail that is sold by rack maker is used, check the external dimensions of the unit and the slide rail mounting holes and mount it according to the instruction manual of each rack maker.

## 2-2. CONNECTING SYSTEM COMPONENTS

This section provides examples that show how to connect the components in your editing system.

### 2-2-1. Connecting VCRs

The VCR connection examples in this section assume that an ESBK-7045 Disk Unit has been connected to the EditStation.

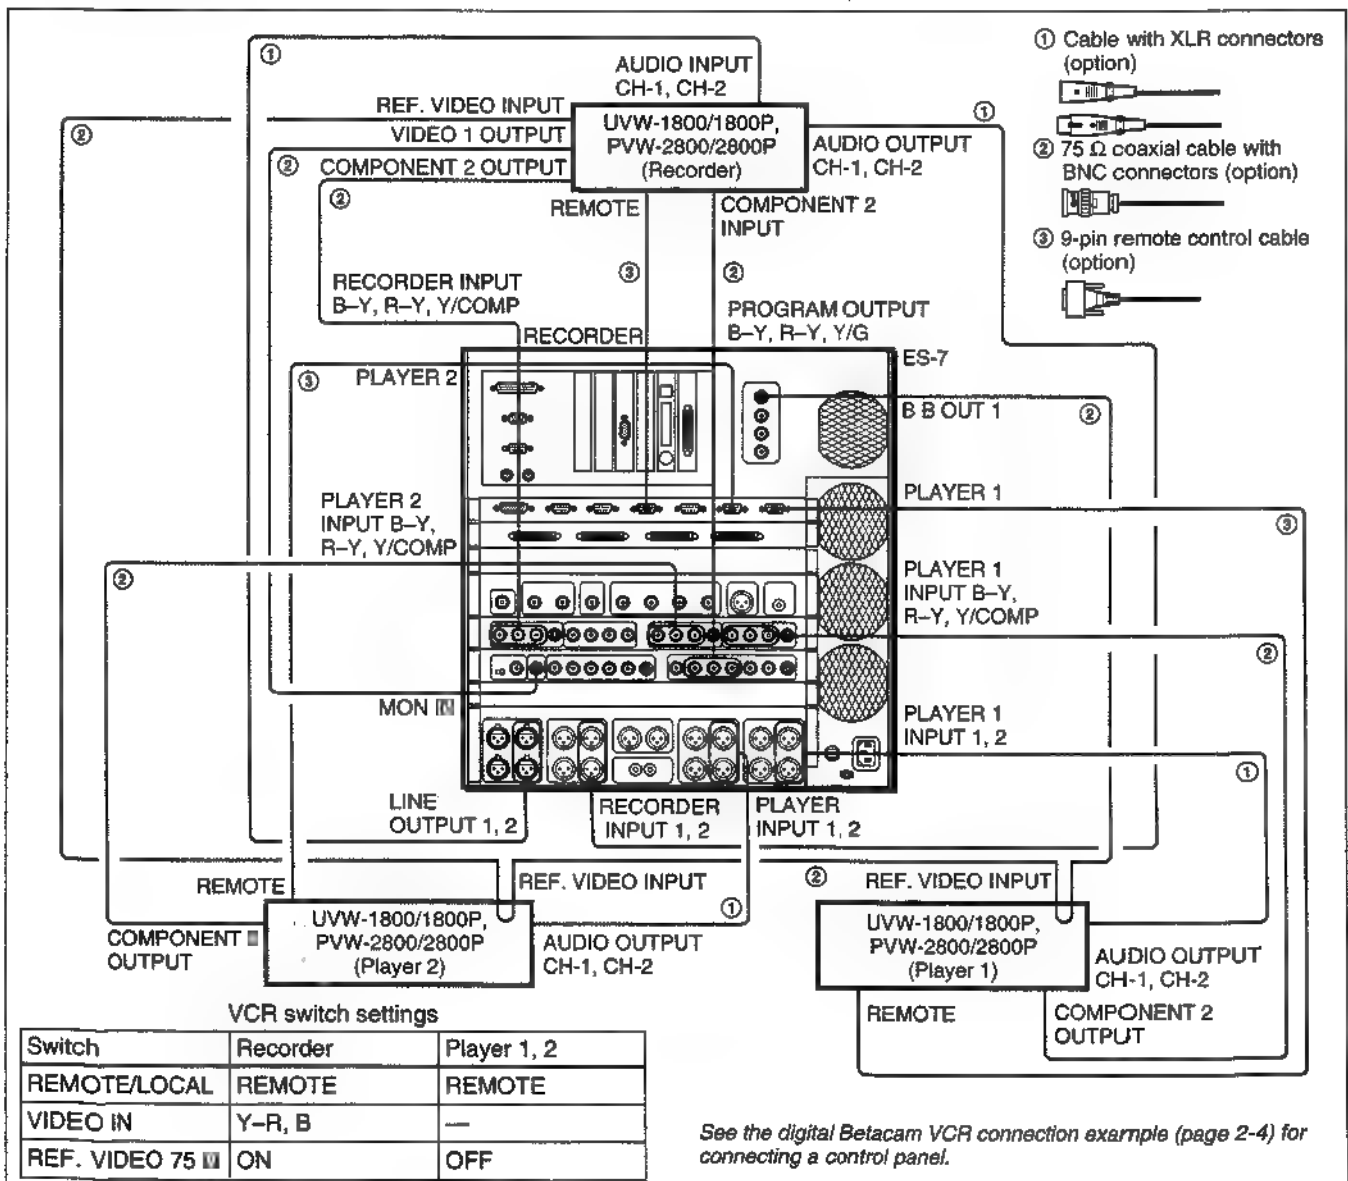

For more information about connecting a disk unit, see page 2-6.

#### Connecting analog VCRs

You can do the following with a system configured as shown below.

- Do linear editing using materials stored on tape and VCR playback.
- Copy clips from tape to the disk recorder.

- Do non-linear editing using materials stored on the disk recorder.
- Record the results of the edit on tape as analog component video signals.

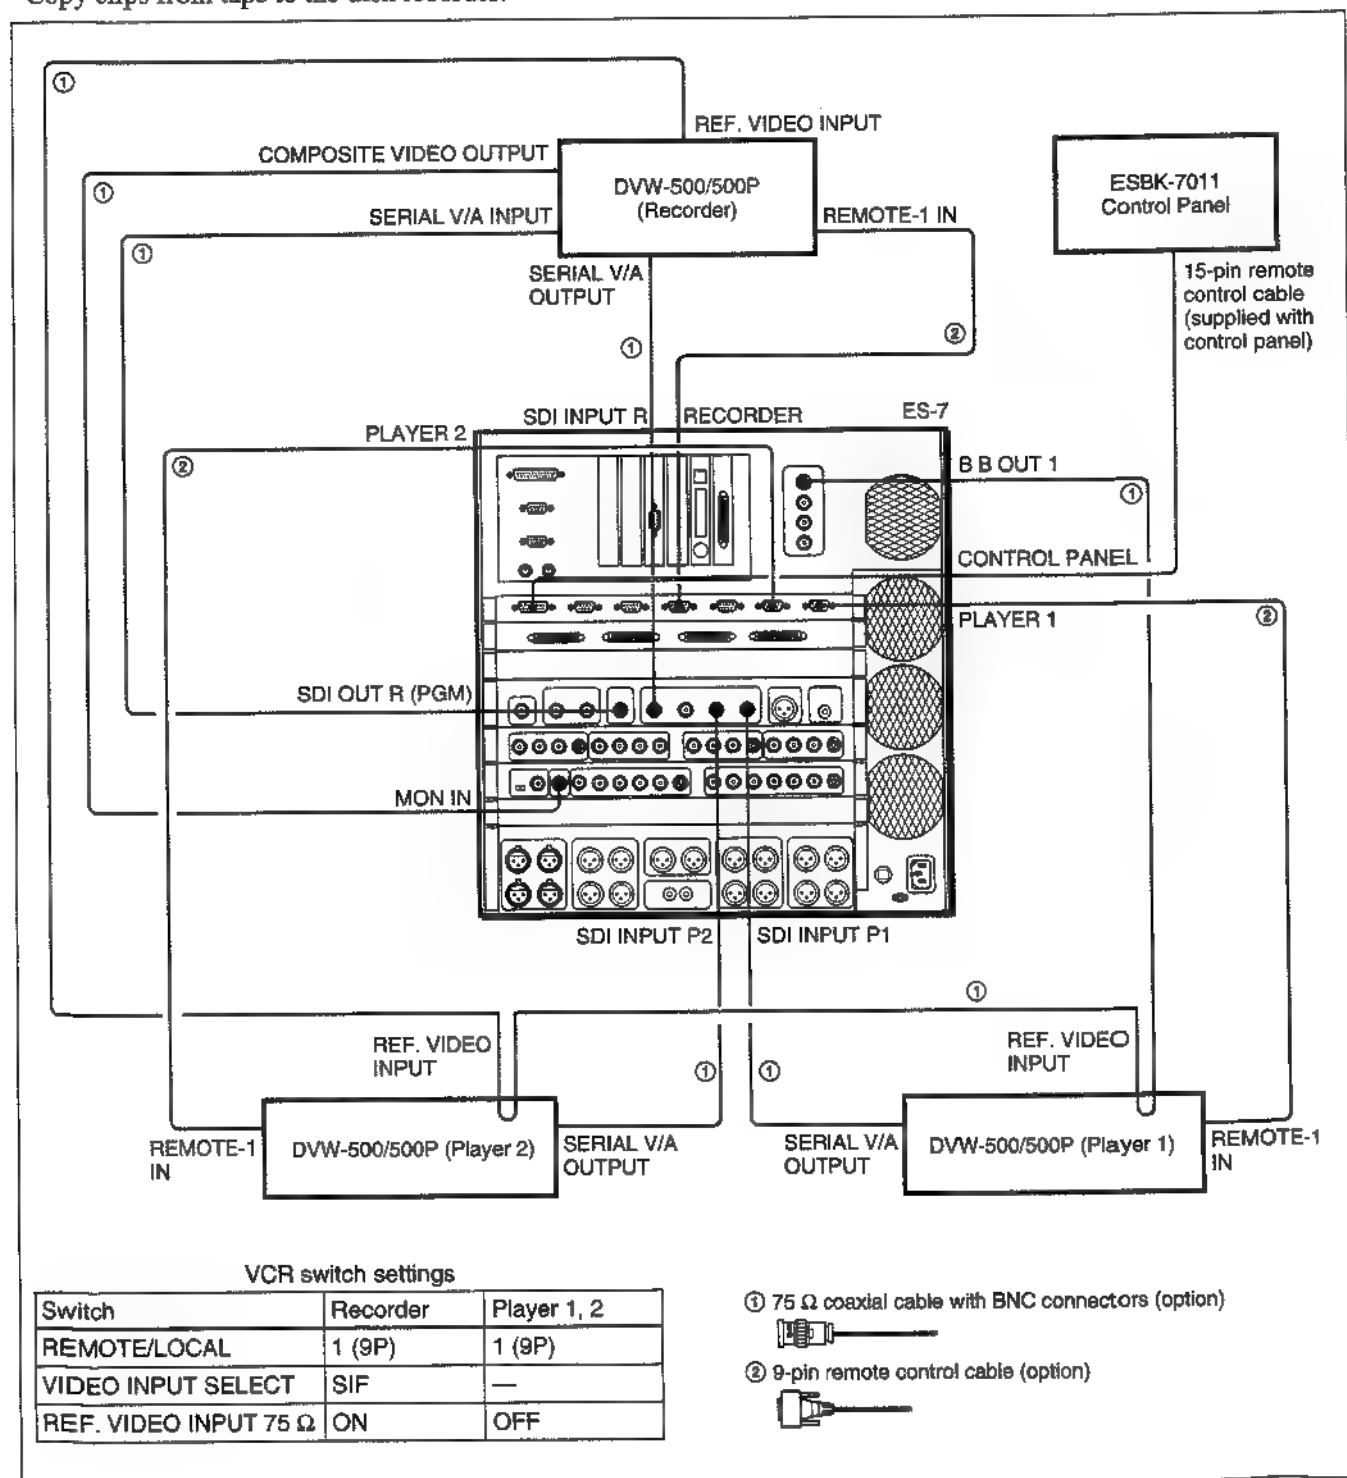

## Connecting digital Betacam VCRs

You can do the following with a system configured as shown below.

- Do linear editing using materials stored on tape and VCR playback.
- Copy clips from tape to the disk recorder.

- Do non-linear editing using materials stored on the disk recorder.
- Record the results of the edit on tape as digital Betacam video signals.

## Connecting DSR-series digital VCRs

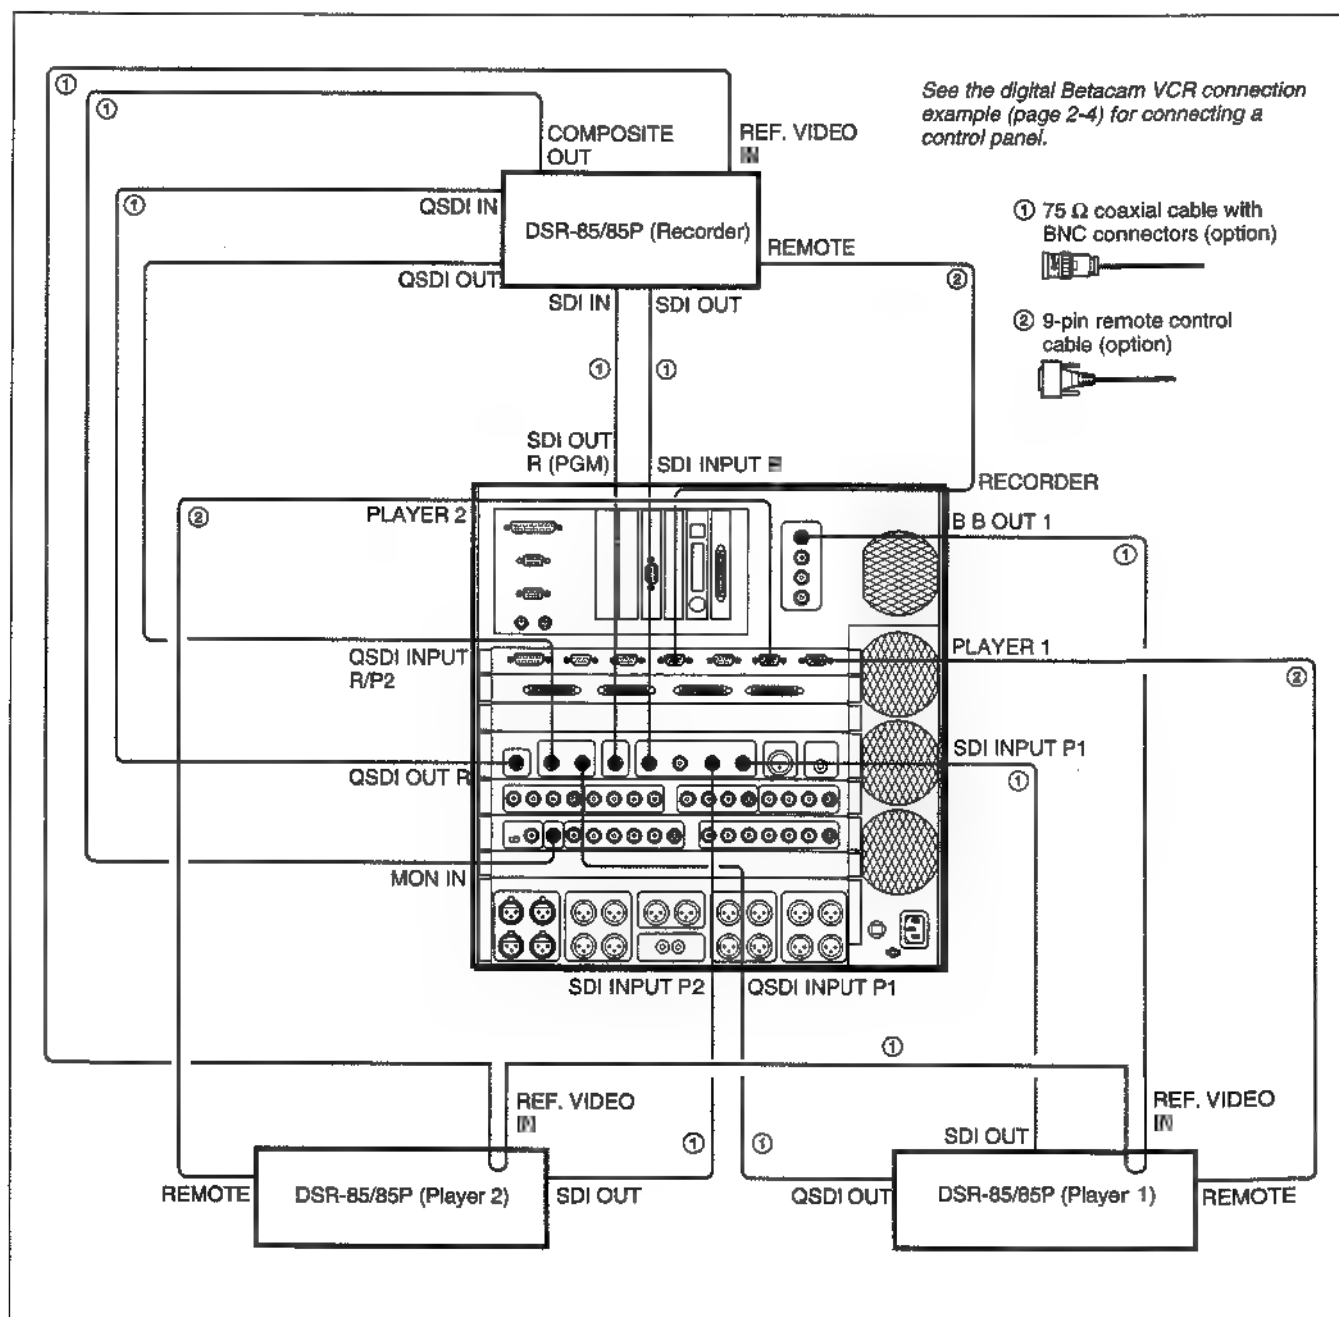

**You can do the following with a system configured as shown below.**

- Do linear editing using VCR playback of materials stored on tape.
- Copy clips from tape to the disk recorder at 4 times normal speed.
- Do non-linear editing using materials stored on the disk recorder.
- Record the results of the edit on tape as serial digital video signals at 4 times normal speed.

In this example, both SDI and QSDI signals are connected. The roles of the signals are as follows.

**SDI signals:** Used in linear editing and hybrid editing.

**QSDI signals:** Used in non-linear editing and for uploads and downloads at 4 times normal speed.

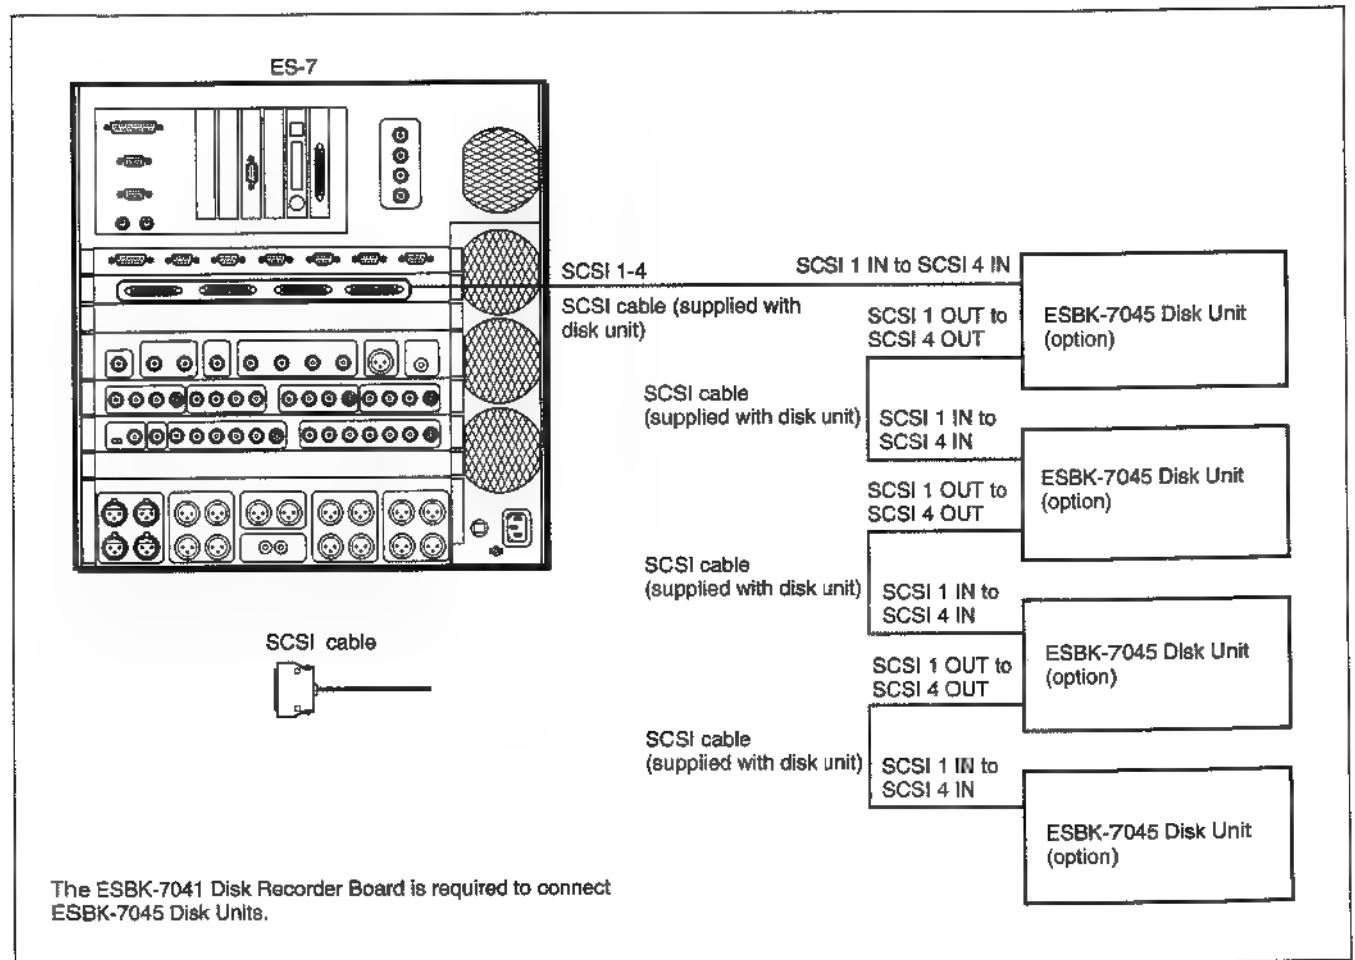

## 2-2-2. Connecting ESBK-7045 Disk Units

You can do the following with a system configured as shown below.

- Do non-linear editing using materials stored on the disk recorder.
- Record up to 4 hours of video on the disk recorder in high-quality mode.

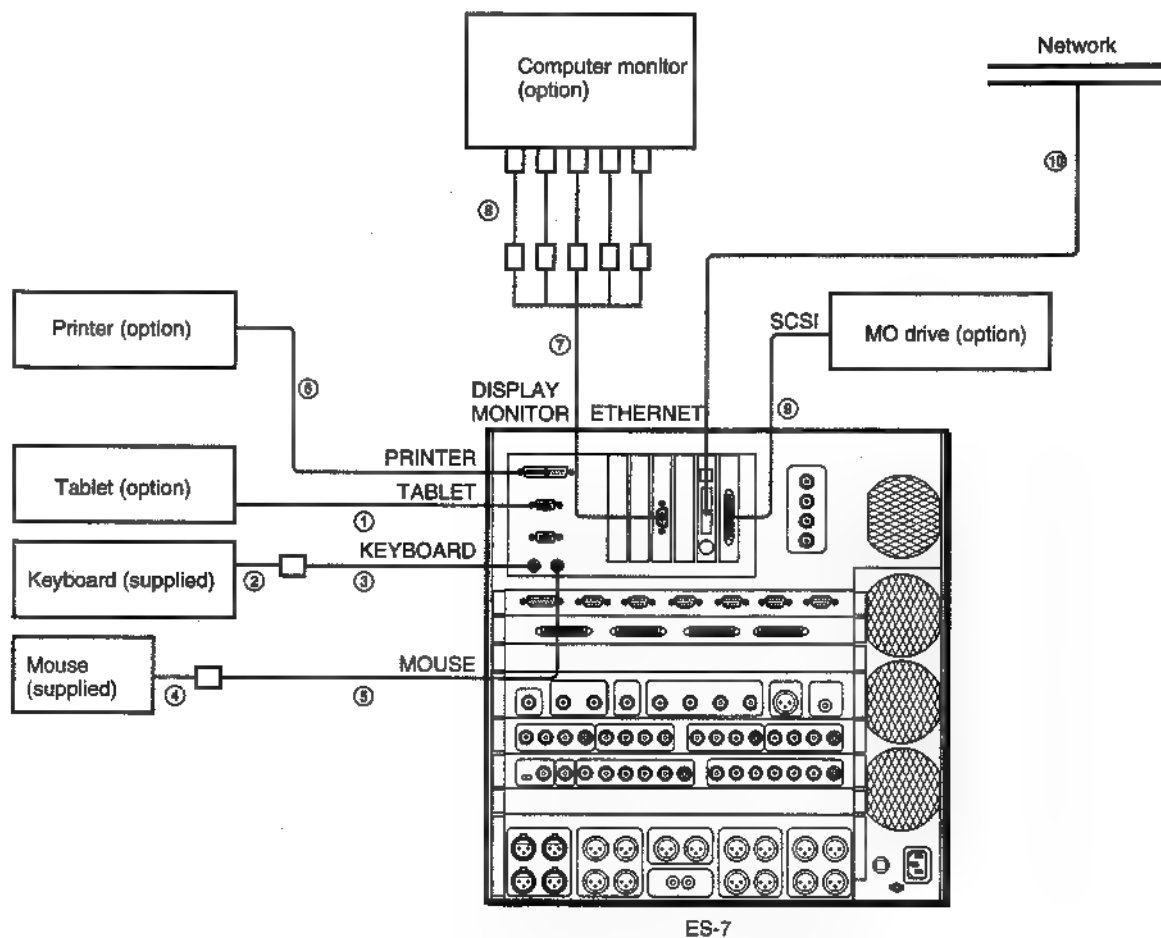

### 2-2-3. Connecting Computer Peripherals

You can do the following with a system configured as shown below.

- Use a tablet to create graphics.
- Send and receive video and editing data over a network.

- Store editing data on MO disks.
- Print editing data.

① Tablet cable (supplied with tablet)

② Keyboard cable (1 m, supplied)

③ Keyboard extension cable (4 m, supplied)

④ Mouse cable (1 m, supplied)

⑤ Mouse extension cable (4 m, supplied)

⑥ Printer cable (option)

⑦ Display monitor multi-cable (D-sub 15-pin on one end, BNC connector × 5 on other end, option)

⑧ BNC extension cable × 5 (Option. Use 5 cables of same length.)

⑨ SCSI cable (option)

⑩ Ethernet connection cable (Option. Refer to the ESBK-7052 Ethernet Option operation manual for details.)

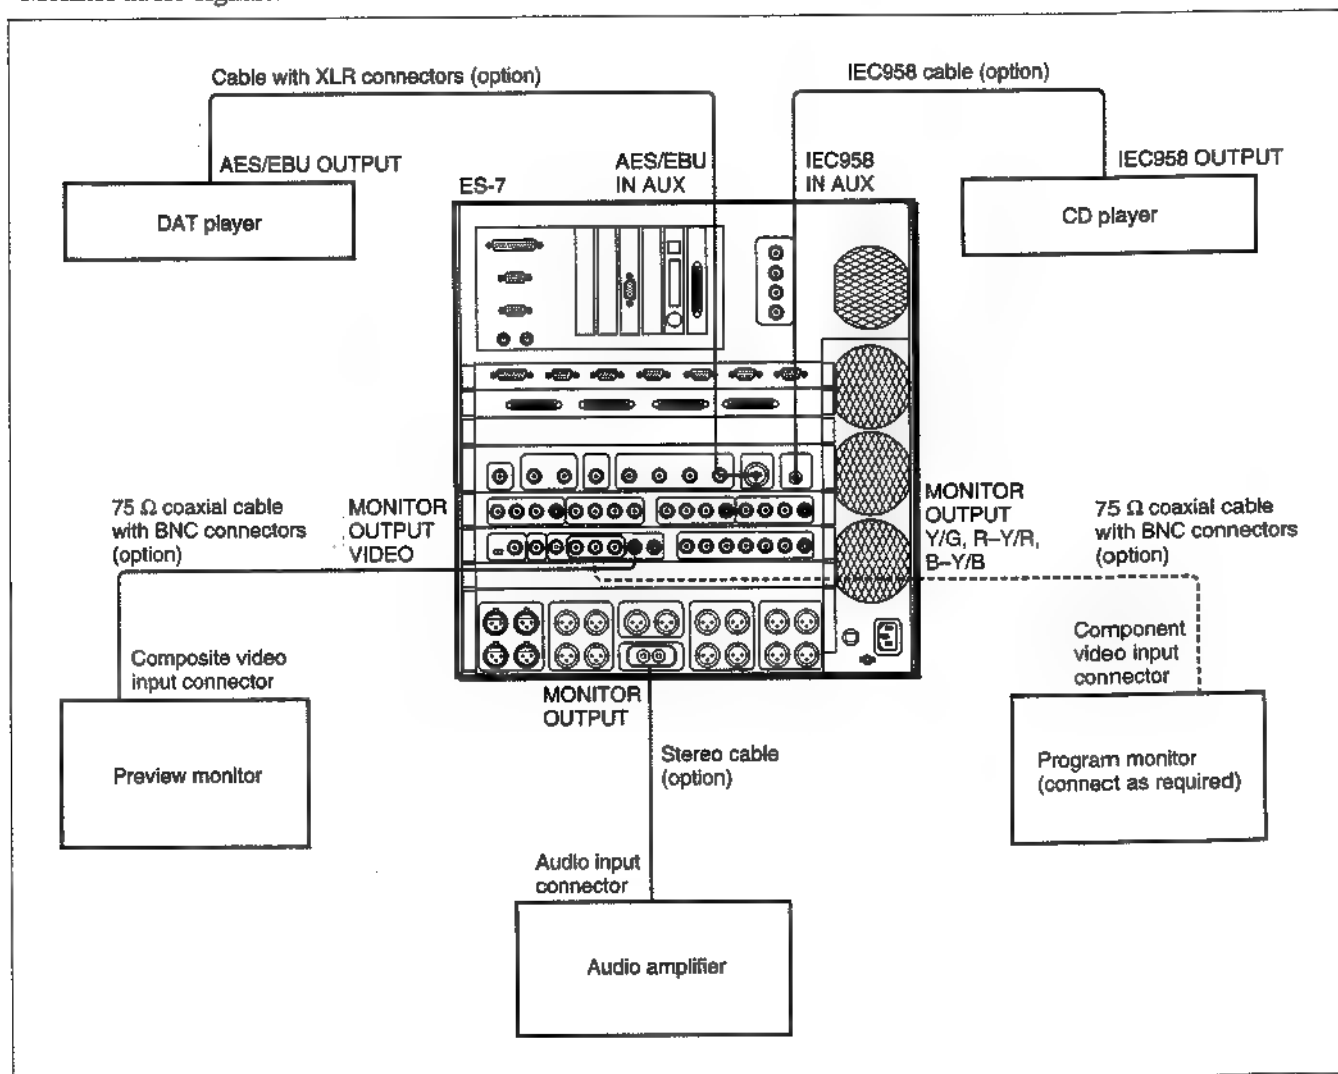

## 2-2-4. Connecting Video/Audio Monitors and Audio Equipment

You can do the following with a system configured as shown below.

- Record digital audio signals from CDs or DATs to videotape.
- Monitor audio signals.

- Monitor video signals before recording.
- Monitor signals input to the recorder.

## 2-2-5. Connecting an External DME Switcher

You can do the following with a system configured as shown below.

- Do linear editing using materials stored on tape and VCR playback.
- Use the DFS-300/300P/500/500P to apply effects and switch between scenes.
- Record the edit results as analog component video signals.

### Setting the editor selection switch on the DME switcher

When connecting a DFS-300/300P/500/500P DME switcher, set the editor selection switch on the DME switcher as follows.

DFS-300/300P: PVE-500

DFS-500/500P: BVE-900

### Types of editing that can be done

The only kind of editing that can be done with a system configured as shown below is linear editing of analog video signals. Non-linear editing and editing of digital signals are not possible.

### Signal connections, settings, and limitations

- When you connect an external DME switcher, the outputs of the MONITOR OUTPUT and PROGRAM OUTPUT connectors of the ES-7 are as follows.

**MONITOR OUTPUT connector:** The output is always the component key fill signal of the internal titler of the ES-7. Connect to the DSK VIDEO IN connector or the INPUT-4 connector of the DFS-300/300P/500/500P.

**PROGRAM OUTPUT connector:** The output is always the key source signal of the internal titler of the ES-7.

- When inputting the key fill signal to both the DSK VIDEO IN and INPUT-4 connectors, an external signal distributor is required.
- When you connect an external DME switcher, connect the output of the PGM OUT connectors of the DFS-300/300P/500/500P to the AUX INPUT connectors of the ES-7.
- The correspondence between VCRs and the INPUT 1 to 4 connectors of the DFS-300/300P/500/500P is as follows.

INPUT-1: PLAYER-1

INPUT-2: PLAYER-2

INPUT-3: AUX

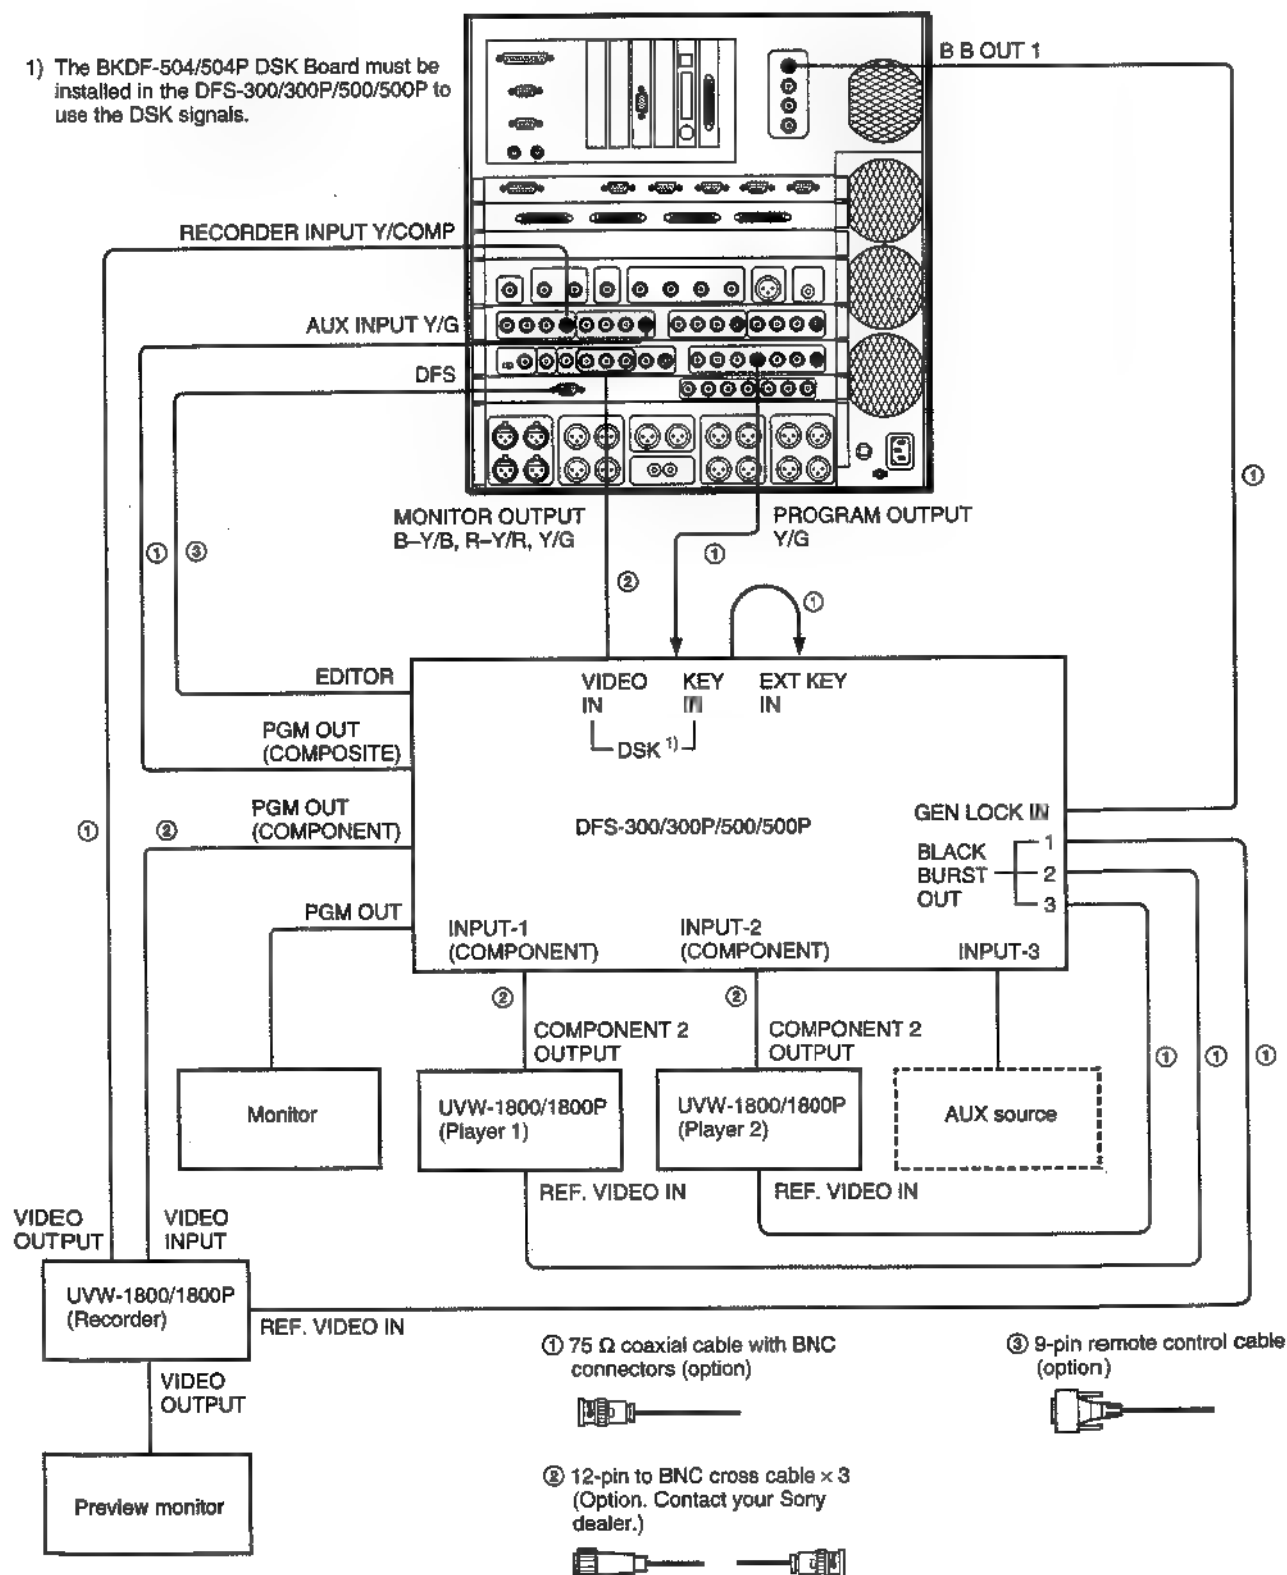

(INPUT-4: Titler key fill)

Set the input signal formats with the input signal format selection switches on the AD board of the DFS-300/300P/500/500P. You cannot set the format from the ES-7 editing software.

- Connect the video monitor that you will use for previews to the VIDEO OUT connector of the recorder VCR.
- In the EditStation editing software, make the Timeline window the active window, select Options from the Settings menu, and set Preview Mode to PB/EE.
- When you connect an external DME switcher, you cannot use the function that superimposes status information on the output of the MONITOR OUTPUT VIDEO connector.
- You can operate the DFS-300/300P/500/500P from the control panel supplied with the DFS-300/300P/500/500P. However, these operations will not be reflected in the screens of the EditStation editing software.

1) The BKDF-504/504P DSK Board must be installed in the DFS-300/300P/500/500P to use the DSK signals.

## 2-3-2. Connector Input/Output Signal

### Input connectors

#### Analog video input

- PLAYER 1 INPUT, PLAYER 2 INPUT Y/COMP : BNC type, 75Ω, 1.0 Vp-p
  - B-Y, R-Y : BNC type, 75Ω
    - B-Y : 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL),  
100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
    - R-Y : 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL),  
100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
  - S-VIDEO : Mini DIN 4-pin, 75Ω
    - Y: 1.0 Vp-p
    - C: 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)
- RECORDER INPUT Y/COMP : BNC type, 75Ω, 1.0 Vp-p
  - B-Y, R-Y : BNC type, 75Ω
    - B-Y : 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL),  
100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
    - R-Y : 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL),  
100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
  - S-VIDEO : Mini DIN 4-pin, 75Ω
    - Y: 1.0 Vp-p
    - C: 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)
- AUX IN Y/G : BNC type, 75Ω
  - Y: 1.0 Vp-p
  - G: 0.7 Vp-p
  - B-Y/B : BNC type, 75Ω
    - B-Y : 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL),  
100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
    - B : 0.7 Vp-p
  - R-Y/R : BNC type, 75Ω
    - R-Y : 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL),  
100/7.5/77/7.5 (NTSC) or 100/0/75/0 (PAL) color bar
    - R : 0.7 Vp-p
  - SYNC : BNC type, 75Ω, 0.286 to 4.0 Vp-p (NTSC) or  
0.3 to 4.0 Vp-p (PAL)
- GEN LOCK IN : BNC type, 75Ω, 1.0 Vp-p

#### Analog audio input

- PLAYER 1 INPUT, PLAYER 2 INPUT, RECORDER INPUT : XLR 3-pin × 4, +4 dBu
- AUX INPUT : XLR 3-pin × 2, +4 dBu

#### Digital input

- SDI INPUT P1, SDI INPUT P2, SDI INPUT AUX, SDI INPUT R, QSDI INPUT P1, QSDI INPUT P2/R (option)
  - : BNC type, 75Ω, 0.8 Vp-p, bitrate 270 Mbps, with SDI audio
- AES/EBU IN AUX : XLR 3-pin
- IEC-958 : Phono jack

## Output connectors

### Analog video output

- PROGRAM OUTPUT, MONITOR OUTPUT

Y/G : BNC type, 75 $\Omega$

Y: 1.0 Vp-p

G (with sync): 1.0 Vp-p

G (without sync): 0.7 Vp-p

B-Y/B : BNC type, 75 $\Omega$

B-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or  
100/0/75/0 (PAL) color bar

B : 0.7 Vp-p

R-Y/R : BNC type, 75 $\Omega$

R-Y: 0.7 Vp-p (NTSC) or 0.525 Vp-p (PAL), 100/7.5/77/7.5 (NTSC) or  
100/0/75/0 (PAL) color bar

R : 0.7 Vp-p

S VIDEOMini : DIN 4-pin, 75 $\Omega$

Y: 1.0 Vp-p

C: 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)

SYNC : BNC type, 75 $\Omega$ , 0.286 to 4.0 Vp-p (NTSC) or 0.3 to 4.0 Vp-p (PAL)

- B B OUT

: Black burst output

BNC type  $\times$  4, 75 $\Omega$ , 0.286 Vp-p

### Analog audio output

- LINE OUTPUT

: XLR 3-pin, +4 dBu (600  $\Omega$  load)

- MONITOR OUTPUT

: Phono jack, -10 dBu (50 k $\Omega$  load) (maximum output level 2.5 Vrms)

### Digital output

- SDI OUT R (PGM), QSDI OUT R (option)

: BNC type, 75 $\Omega$ , 0.8 Vp-p, bitrate 270 Mbps, with audio

## System Controller

- PLAYER1: \*\*\*=P1 : CN4/SY-219 : D-SUB 9P Female

## 2-4. SWITCHES/JUMPERS/LEDs

### 2-4-1. ES-7

#### <AU-217 Board>

AU-217 Board A side

#### LEDs

D2 (M5), D3 (M5), D4 (M5), D5 (M5): Factory Use

#### Switches

SW1 (J4): Reset Switch (push-to-on switch)  
When pressed, this switch resets the MPU.

#### <BF-54 Board>

BF-54 Board A side

#### JUMPERS

JP1 (C2): VSYNC interrupt select

**CAUTION: Do not change the setting at shipping from factory.**

Setting at shipping from factory:  
IRQ9 short-circuited

JP2 (C2): SY-219 SYNC interrupt select

**CAUTION: Do not change the setting at shipping from factory.**

Setting at shipping from factory:  
None (a jumper is placed on IRQ5 but inserted only halfway)

JP3 (C3): SY-219 communication memory address select

**CAUTION: Do not change the setting at shipping from factory.**

Setting at shipping from factory:  
C8000h short-circuited

# <DA-95 Board>

DA-95 Board A side

## SWITCHES

S100 (A2): 75 ohms terminator ON/OFF switch (for REF INPUT signal)  
Setting at shipping from factory: ON

S101 (L5): H PHASE (MSB) adjust switch for BB (REF OUT) signal

S102 (L5): H PHASE (LSB) adjust switch for BB (REF OUT) signal

**CAUTION: Do not move these switches other than when to perform board adjustments.**

These switches are used to advance BB's H PHASE from that of VIDEO OUT signal. Let the normal value of H PHASE be 0 ns. By setting smaller values to these switches, signal phase of VIDEO OUT delays from that of BB (REF OUT). (1 step = 70 ns)

Be careful that H PHASE adjustment range specification varies when changed the value above.

Following adjustments are required when changed the value above.

Sub-carrier fine adjustment potentiometer = RV612 (during internal sync operation)

H PHASE adjustment potentiometer = RV100 (during external input sync operation)

Sub-carrier fine adjustment potentiometer = RV611 (during external input sync operation)

BB (REF OUT) sub-carrier fine adjustment potentiometer = RV804 (during external input sync operation)

Switch settings at shipping from factory and in normal operation: S101 = 7, S102 = 8

S103 (K5): V BLANKING PHASE adjust switch

**CAUTION: Do not move these switches other than when to perform board adjustments.**

## Display Start Lines

525

SW's values	Filed 1	Filed 2

5	15 line	15 line
4	14 line	14 line
3	13 line	13 line
2	12 line	12 line
1	11 line	11 line
0	10 line	10 line

625

SW's values	Filed 1	Filed 2
3	23 line	23 line
2	22 line	22 line
1	21 line	21 line
0	20 line	20 line

Switch settings at shipping from factory and at normal operation: 525 = B, 625 = 3

S600 (K7): sub-carrier phase adjust switch (external input sync operation)

This switch inverts the phase of VIDEO-OUT sub-carrier phase by 180 degrees during external input sync operation.

This switch is used for VIDEO-OUT SCH adjustment when changed H phase with RV100 during external input sync operation. Use RV611 for fine adjustment less than 180 degrees.

Setting at shipping from factory: 0°

S601 (H6): sub-carrier phase adjust switch (internal sync operation)

**CAUTION: Do not move this switch other than when to perform board adjustments.**

This switch inverts the phase of VIDEO-OUT sub-carrier phase by 180 degrees during internal sync operation.

Setting at shipping from factory and in normal operation: 0°

S801 (L7): BB (REF-OUT) sub-carrier phase fine adjust switch (external input sync operation)

This switch inverts the phase of BB (REF OUT) sub-carrier phase by 180 degrees during external input sync operation.

This switch is used in BB (REF-OUT) SCH adjustment when changed H phase with RV100 during external input sync operation. Use RV804 for fine adjustment less than 180 degrees.

Setting at shipping from factory: 0°

#### <SY-219 Board>

SY-219 Board A side

S1 (F4): mode select switch (4-bit DIP switch)

**CAUTION: Do not set S1-1, -3 and -4 to OFF: special mode.**

S1-1

ON : normal mode (setting at shipping from factory)

OFF : special mode

S1-2

ON : normal mode (setting at shipping from factory)

OFF : write mode when replaced the flash memory

When replaced the flash memory, use this mode to download the program.

S1-3

ON : normal mode (setting at shipping from factory)

OFF : special mode

S1-4

ON : normal mode (setting at shipping from factory)

OFF : special mode

S3 (A7): reset switch (push-to-on switch)

This switch resets the main unit (except PC block) of Edit Station. This switch is used when updated content of the flash memory located on SY-219 board. Press this switch by inserting a ball-point pen, etc. into a hole located between AUX and RECORDER connectors on the real panel.

### <LE-154 Board>

LE-154 Board A side

D1 (A1): power indicator LED (green)

This LED is illuminated when the power is turned on.

This LED flashes when one (or more) of four cooling fans installed on the rear panel stopped.

### 2-4-2. ESBK-7021

#### <MY-74 Board>

MY-74 Board A side

S201 (A11): test switch

CHROMA READ ADDRESS rounding circuit ON/OFF

Setting at shipping from factory: OFF

## 2-6. CABINET REMOVAL

## 2-7. PARTS REPLACEMENT

### 2-7-1. Floppy Disk Drive/CD ROM Drive Replacement

- ① Remove the top panel and front panel. (Refer to section 2-6.)
- ② Disconnect the two 4-pin connectors, the 34-pin and 40-pin connectors of the flat cables.
- ③ Remove the twelve screws (BVTT 3 × 6), and then remove the spring CD and spring FDD.

- ④ Remove the six screws (BVTT 3 × 6), and then remove the FD/CD Assy.

#### Installation:

Match two holes of the FD/CD Assy to the projection of the chassis, and then tighten the screws.

- ⑤ Remove the eight screws (B 3 × 6), and then remove the floppy disk drive and CD ROM drive from the disk plate.

- ⑥ Turn the CD ROM drive upside down, and insert something such as a clip to the hole. Then, pull out the tray.

- ⑦ Push the tray to the direction of the arrow **II** during opening the two hooks 1 to the direction of the arrow **A**, and remove the tray panel. Push the two hooks 2 to the direction of the arrow, and remove the front panel.

- ⑧ Remove the front panel during pushing the two hooks of the front panel in the floppy disk drive to the direction of the arrow.

- ⑨ Remove the eject button during pushing the hook of the eject button down to the direction of the arrow with tweezers.

**Note for installing the eject button:**

Be sure to install the eject button with pushing the \* portion by a cutting pliers. To push the sheet metal may cause trouble.

## 2-7-2. Hard Disk Drive Replacement

- ① Remove the top panel and left side panel. (Refer to section 2-6.)
- ② Disconnect the 4-pin connector and the 40-pin connector of the flat cable.
- ③ Remove the three screws (BVTT 3 × 6) and raise the spring plate. Then remove the hard disk drive assy.

- ④ Remove the four HD fixing screws (inch-sized), and then remove the hard disk drive from the HDD plate.

**Note: When removing, the hard disk drive should be avoided from physical shock.**

### 2-7-3. Power Block (RE-122 Board) Replacement

- ① Remove the top panel, front panel and left side panel.  
(Refer to section 2-6.)
- ② Remove the 17 screws (BVTT 3 × 6), and then open the power block to the direction of the arrow.

- ③ Remove the eight screws (BVTT3 × 6), and then remove the cover.

- ④ Disconnect the 15 connectors (CN4 to CN6, CN14, CN21 to CN26 and CN31 to CN35) on the RE-122 board.

- ⑤ Remove the 13 screws (PWH 3 × 6), and then remove the RE-122 board.

## 2-7-4. Fuse Replacement

The RE-122 board has eight fuses.

In the event of excessive current, cut the welded joints.

After looking into the cause, replace the fuses.

- ① Remove the RE-122 board. (Refer to section 2-7-3.)
- ② F1 to F6 and F11: Remove the solders on the fuses from the reverse side of the RE-122 board.
- F100 : Remove the solders on R134 and F100 from the reverse side of the RE-122 board. Then, replace the fuse.

Fuses	Address	Sony Parts No.
F1, 2, 11	E-8	1-533-708-11 (3 A, 250 V)
F3	A-6	1-576-260-51 (10 A, 125 V)
F4, 5	A-6	1-532-966-11 (5 A, 125 V)
F8	A-5	
F100	E-4	1-532-496-11 (10 A, 250 V)

## 2-7-5. DC Fan Replacement

- ① Open the power block, and then remove the cover. (Refer to section 2-7-3.)
- ② Disconnect the four connectors of the DC fan from the RE-122 board.
- ③ Remove the four screws (B 3 × 30), and then remove the fixing plate.

**Note:** Install the fan so that the label should be the outside of the unit.

## 2-7-6. AU-217 Board Replacement

- ① Remove the two screws (B 3 × 6) from the rear panel, and then remove the AU-CN Assy.
- ② Disconnect the six connectors (CN800 to CN805) from AU-217 board.
- ③ Pull out the AU-217 board from the MB-639 board to the direction of the arrow.

## 2-7-7. MB-639 Board Replacement

- ① Remove the AU-217 board. (Refer to section 2-7-6.)
- ② Disconnect all card rack boards from the side of the rear panel.
- ③ Disconnect the three connectors (CN6 to CN8) from the MB-639 board, and then remove the six screws (BVTT 3 × 6).

- ④ Remove the top panel and front panel. (Refer to section 2-6.)
- ⑤ Remove the FD/CD assy. (Refer to section 2-7-1.)
- ⑥ Disconnect the six connectors (CN1 to CN5 and CN14) from the MB-639 board and the connectors (SPEAKER) from the PC main board. Remove the three clampers of the harness, then remove the harness.

- ⑦ Remove the 17 screws (BVTT 3 × 5), and then open the power block. (Refer to section 2-7-3.)
- ⑧ Remove the 14 screws (BVTT 3 × 6), and then remove the front chassis assy.

- ⑨ Remove the six screws (BVTT 3 × 6), and then remove the MB-639 board to the direction of the arrow.

## 2-7-8. PC Main Board Replacement/ Adjustment

[How to replace]

**Note:** In the event of failure on the PC main board, be sure to replace the board on which the parts are mounted.

- ① Remove the top panel. (Refer to section 2-6.)
- ② Disconnect the nine connectors on the PC main board.

- ④ Remove the nine screws (BVTT 3 × 6), and then remove the PC main board.

- ③ Remove the screw (B 3 × 4) from the bracket, and then remove the VPR-18 board. Remove the VGA board and BF-54 board, ESBK-7051 or ESBK-7052 (these ESBK are the optional boards.) from the PC main board.

Confirm that jumpers are set to the following position.

Confirm that jumpers are set to the following position.

**[How to perform adjustment after replacing]**

1. After the PC main board is installed, turn on the power.
2. After the message which is "Press DEL to enter SETUP...." is displayed, press the DEL key. Then, SETUP items are displayed. (Operate this step quickly because the message is displayed for a short period of time.)

**SETUP**

- \* When the display is started up, the above message may not be displayed and the selection message of starting up WINDOWS NT may be displayed. When the selection message is displayed, start up again.

**In case of Starting up again**

- The selection message of starting up WINDOWS NT may be displayed after the message which is "Press DEL to enter SETUP ...." is disappeared.

In the above case, while the selection message is displayed (about 30 seconds), turn off the power. Then, start up again.

**Display 1**

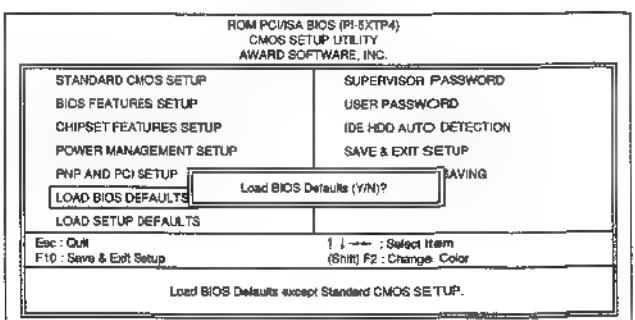

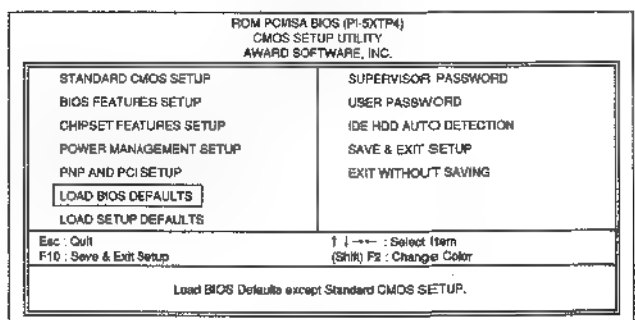

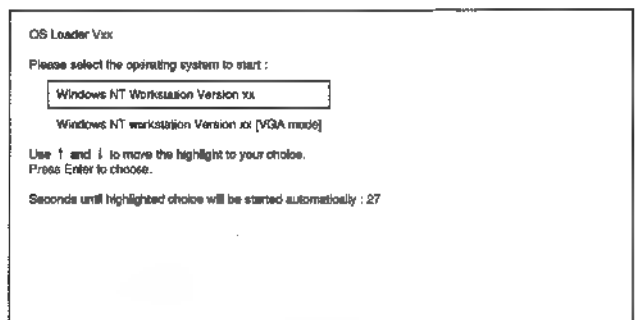

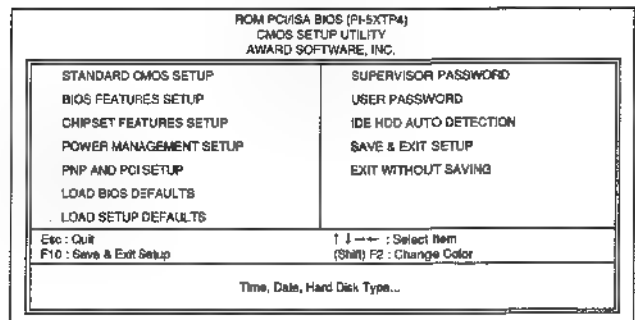

- When the WINDOWS NT display has been started up, shut down this unit. Then, start up again.

3. Shift the hollow pointer to LOAD BIOS DEFAULTS of which the items are displayed on the monitor with the arrow keys.

4. Press the ENTER key.

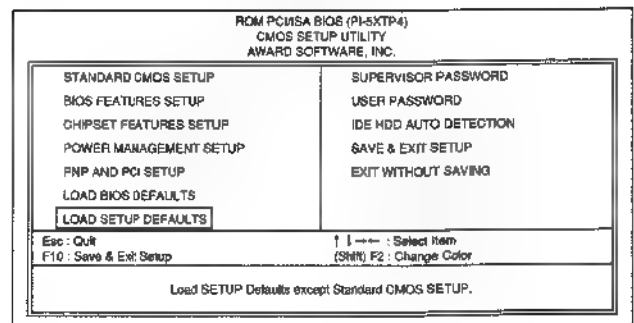

To press the ENTER key, the message for selecting execution is displayed.

Input "Y", and then press the ENTER key.

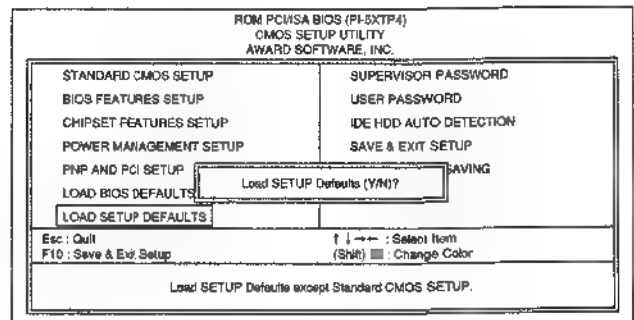

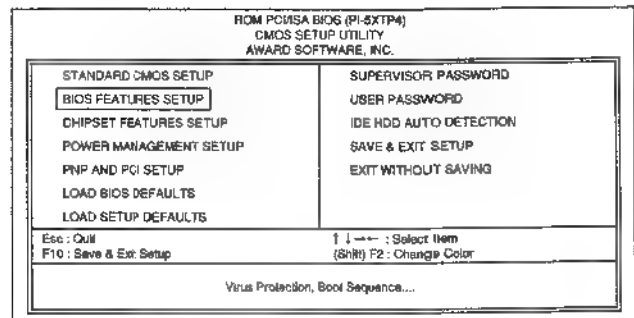

- Shift the hollow pointer to **LOAD SETUP DEFAULTS** of which the items are displayed on the monitor with the arrow key.

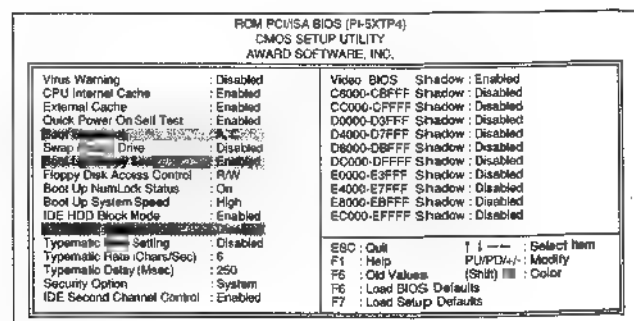

- Press the **ENTER** key.  
To press the **ENTER** key, the message for selecting execution is displayed.  
Input **"Y"**, and then press the **ENTER** key.

- Shift the hollow pointer to **BIOS FEATURES SETUP** of which the items are displayed on the monitor with the arrow key.

- Press the **ENTER** key.  
To press the **ENTER** key, **BIOS FEATURES SETUP** is selected. The contents of **BIOS FEATURES SETUP** are displayed.  
Press the **+** or **-** key, then correct the following items.  
Boot Sequence → A, C  
Boot Up Floppy Seek → Enabled  
IDE 32-bit Transfer Mode → Disabled

- Press the **ESC** key, then the display is returned to the **SETUP** items.  
\* It is not necessary to correct **CHIPSET FEATURES SETUP**.

10. Shift the hollow pointer to **POWER MANAGEMENT SETUP** of which the items are displayed on the monitor with the arrow key.

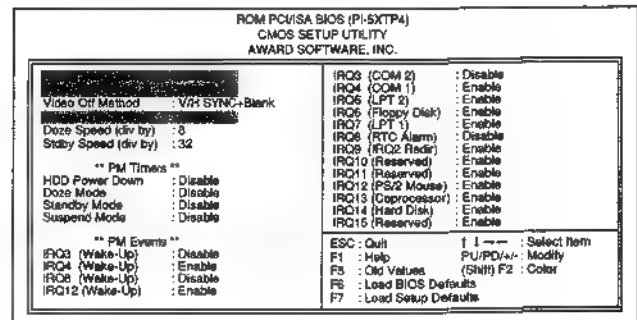

11. Press the ENTER key.

To press the ENTER key, **POWER MANAGEMENT SETUP** is selected. The contents of **POWER MANAGEMENT SETUP** are displayed.

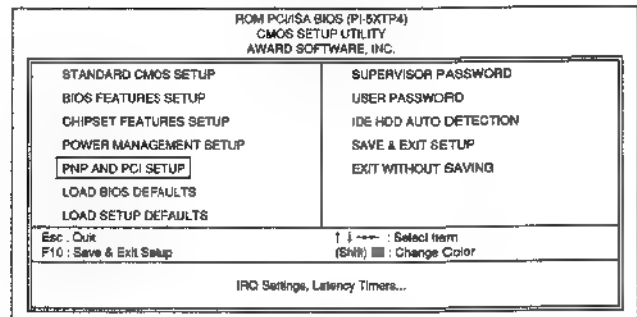

Press the + or - key, then correct the following items.

Power Management → Disable  
Video Off Option → Always On  
Suspend Switch → Disable

12. Press the ESC key, then the display is returned to the SETUP items.

13. Shift the hollow pointer to **PNP AND PCI SETUP** of which the items are displayed on the monitor with the arrow key.

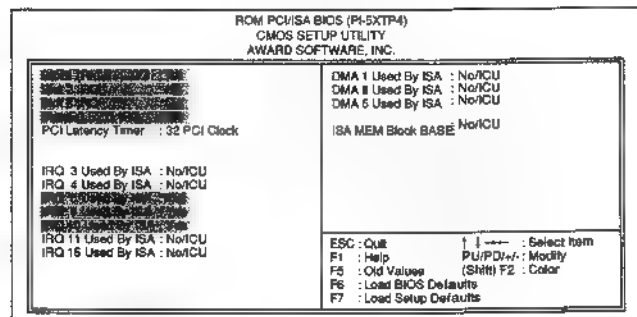

14. Press the ENTER key.

To press the ENTER key, **PNP AND PCI SETUP** is selected. The contents of **PNP AND PCI SETUP** are displayed.

Press the + or - key, then correct the following items.

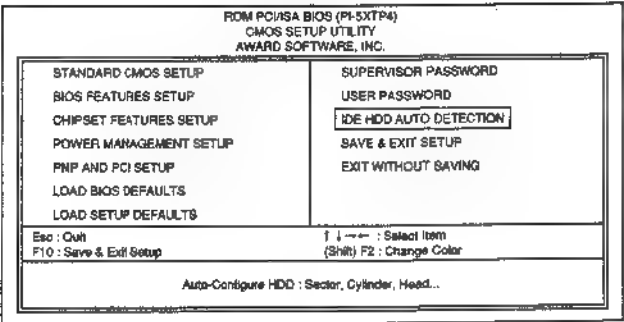

Slot 1 (RIGHT) IRQ → NA  
Slot 2 IRQ → NA  
Slot 3 IRQ → NA  
Slot 4 (LEFT) IRQ → NA  
IRQ 5 Used By ISA → Yes  
IRQ 9 Used By ISA → Yes  
IRQ 10 Used By ISA → Yes

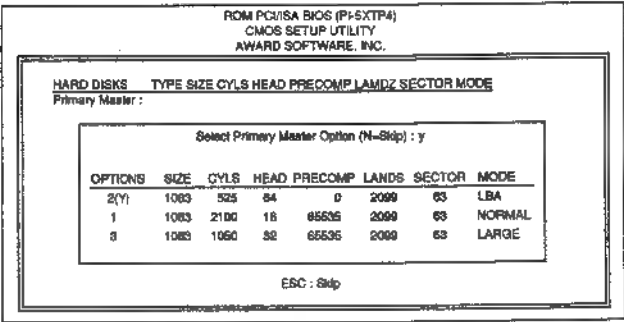

15. Press the ESC key, then the display is returned to the SETUP items.

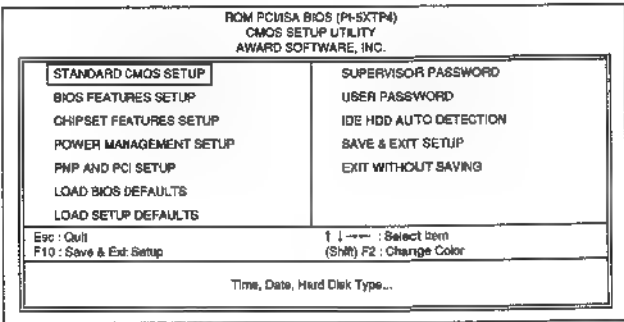

16. Shift the hollow pointer to IDE HDD AUTO DETECTION of which the items are displayed on the monitor with the arrow key.

17. Press the ENTER key.  
To press the ENTER key, IDE HDD AUTO DETECTION is selected. The contents of IDE HDD AUTO DETECTION are displayed.  
Select 2(Y) to Primary Master, and then press the ENTER key.  
Press the ESC key to skip Primary Slave, Secondary Master and Secondary Slave, and then the display of SETUP items is returned.

18. Shift the hollow pointer to STANDARD CMOS SETUP of which the items are displayed on the monitor with the arrow key.

19. Press the ENTER key.

To press the ENTER key, STANDARD CMOS SETUP is selected. The contents of STANDARD CMOS SETUP are displayed.

Press the + or - key, then correct the following items.

Date

Time

Drive A → 1.44M, 3.5 in.

Drive B → None

3 Mode → Disabled

Halt On → All Errors

Confirm the following items.

Primary Master → User 1083 525 64 0 2099 63 LBA

Primary Slave → None 0 0....

Secondary Master → None 0 0....

Secondary Slave → None 0 0....

## 2-7-9. Flash Memory Replacement

Follow the procedure below to upgrade the flash memory version loaded on the SY-219 board.

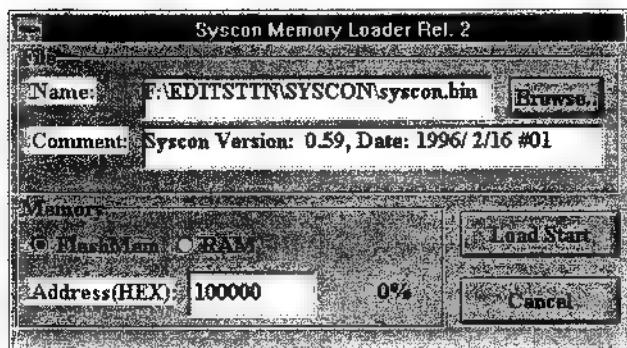

Sony part number : 8-759-377-81

Type designation : MBM29F400BA-12

Address : H-2

### <Version upgrade procedure>

- ① Insert the operating system (Sony part number: 3-603-505-01) containing the version upgrade data into the CD-ROM drive.
- ② Start up WINDOWS-NT, open the File Manager in the Main menu under the Program Manager, and activate C:\YES-7\SERVICE\ALLStart.bat.
- ③ Next, activate C:\YES-7\SERVICE\LDSYROM.EXE.
- ④ Check that "Flash Memory" is selected for Memory and then choose "Browse".

- ⑤ Select the Drive and Directory, and then choose, File.
- ⑥ Select OK or click on, File.
- ⑦ Check that the version has been changed, and then choose "Load Start".
- ⑧ The Load screen is shown until the program ends.
- ⑨ Push the reset switch for the SY-219 board (S3, the hole between the RECORDER and AUX connectors on the rear panel) or shut down the system and turn the power off.
- ⑩ Start up WINDOWS-NT, and check that the system controller is functioning properly by reactivating AllStart.bat and then activating C:\YES-7\SERVICE\IDCHECK.EXE or VERSION.EXE

### <Program writing procedure after exchanging flash memory>

- ① Once the system is shut down and the power is turned off, remove the SY-219 board and set "1,2" of the DIP switch (S1) to OFF.
- ② Carry out the same procedure under Steps 2 to 7 of the version upgrade procedure.
- ③ Once the system is shut down and the power is turned off, set the "1,2" of the DIP switch (S1) on the SY-219 board to ON.
- ④ Start up WINDOWS-NT, open the File Manager in the Main menu under the Program Manager, and activate C:\YES-7\SERVICE\ALLStart.bat
- ⑤ Next, check that the system controller is functioning properly by activating C:\YES-7\SERVICE\IDCHECK.EXE or VERSION.EXE

## 2-7-10. Lithium Battery Replacement

The MPU-95 board of the ESBK-7041, disc recorder board has a lithium battery.

The battery is mounted on IC128 (address: G-4), which is prepared for power failure.

When starting up the edit manager, the message which the battery runs down is displayed. Then, replace the battery.

(The battery has an estimated life of about six years.)

Sony part number : 1-528-749-11

Type designation : M4Z28BR00SH1

## 2-8. Notes on Spare Parts

### 2-8-1. Notes on Spare Parts

#### (1) Safety Related Components Warning

Components marked with  $\triangle$  on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose part numbers appear in this manual or in service bulletins and service manual supplements published by Sony.

#### (2) Standardization of Parts

Spare parts supplied from Sony Parts Center may not always be identical with the parts actually in use due to accommodating the improved parts and/or engineering changes or standardization of genuine parts.

This manual's exploded views and electrical spare parts list indicate the part numbers of the standardized genuine parts at preset.

#### (3) Stock of Part

Parts marked with "o" in the SP(Supply code) column of the spare parts list are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional time for delivery.

#### (4) Units for Capacitors, Inductors and Resistors

The following units may be assumed in schematic diagrams, electrical parts list and exploded views unless otherwise specified.

Capacitor :  $\mu\text{F}$

Inductor :  $\mu\text{H}$

Resistor :

### 2-8-2. Replacement of Chip Parts

#### Required Tools

Soldering iron : 20W

If possible, use a soldering-iron tip heatcontroller set to  $270 \pm 10^\circ\text{C}$ .

Braided wire : Solder Taul or equivalent

Sony part No. 7-641-300-81

Solder : 0.6mm dia. is recommended.

Tweezers

#### Soldering Conditions

Soldering iron temperature :  $270 \pm 10^\circ\text{C}$

Soldering time : Less than 2 seconds per pin

#### Replacement of Resistor and Capacitor

1. Place the soldering-iron tip onto the chip part and heat it up until the solder is melted. When the solder is melted, slide the chip part aside.
2. Make sure that there is no pattern peeling, damage and/or bridge around the desoldering position.
3. After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
4. Place new chip part in the desired position and solder both ends.

**NOTE:** Do not use a chip part again once it has been removed.

### Replacement of Transistors and Diodes

1. Cut the terminals of the chip part with nippers.
2. Remove the cut leads with soldering iron as above.
3. Make sure that there is no peeling, damage and/or bridge around the desoldering positions.
4. After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
5. Place new chip part in the desired position and solder the terminals.

### Replacement of ICs

1. Using the braided wire, "SOLDER TAUL"(Sony Part No. 7-641-300-81), remove the solder around the pins of the IC-chip to be removed.
2. While heating up the pins, remove the pins one by one using sharp-pointed tweezers.
3. Make sure that there is no pattern peeling, damage and/or bridge around the desoldering position.
4. After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
5. Place new chip part in the desired position and solder the pins.

### 2-8-3. Removal of PLCC IC

#### PLCC socket Extraction Tool

(Sony Part No. J-6035-070-A)

This extraction tool is useful for extracting the IC(PLCC type) inserted into an IC socket, and fits all sizes of ICs from 20 pins through 124 pins.

**NOTE:** Do not try to pull chip carrier out of socket and let the tool action pull it out. Do not squeeze harder than necessary, only enough that the tool action occurs.

#### <How to use the Extraction Tool>

1. Spread or compress the tool legs so the tongs will fit into the slots of the chip carrier socket.

2. Insert the tool tongs into the slots of the carrier socket. Push fully in so that the tool butts on the socket at "A".

3. Place the thumb and the first and second finger on the ribbed area of the tool. Maintain a small downward force to keep the tool butted on the socket. Squeeze the thumb and finger together so that the tool legs tend to straighten. This action will draw the chip carrier out of the socket and grip it within the tool legs. Maintain the squeezing action so as to hold the chip in the tool, hold the tool over your other hand and relax the squeeze. The chip will fall out of the tool and into your hand.

#### 2-8-4. Power Supplied Cord for CE

Power Cord : 1-590-910-11

## SECTION 3

### DIAGNOSIS FUNCTION

#### 3-1. OVERVIEW

Using the diagnosis function installed in the EditStation, the information such as hardware configuration, software version on the block basis installed in the EditStation can be displayed on a CRT screen. And also, results of the self-diagnosis which is performed on each board at the time of system start-up can be displayed.

In addition, manual or automatic diagnosis on the total system or the block basis is possible to be performed.

#### 3-2. FUNCTIONS

The diagnosis provides following functions:

- Displays the system configuration diagram.
- Displays diagnosis information on the board basis.
  - PC board
  - Graphics board
  - Video In/Out board
  - System Controller board
  - Switcher/DME board
  - Disk Recorder board
  - Digital I/O board
  - Audio/Mixer board
- Displays devices with connected to the system, and checks their operating status
  - Control Panel
  - VTR etc.
- System Diagnosis
  - Displays, saves into files, and prints out the results of diagnosis

#### 3-3. DIAGNOSIS PROCEDURES

##### 3-3-1. Start-up/End of Diagnosis Program (SelfDiag)

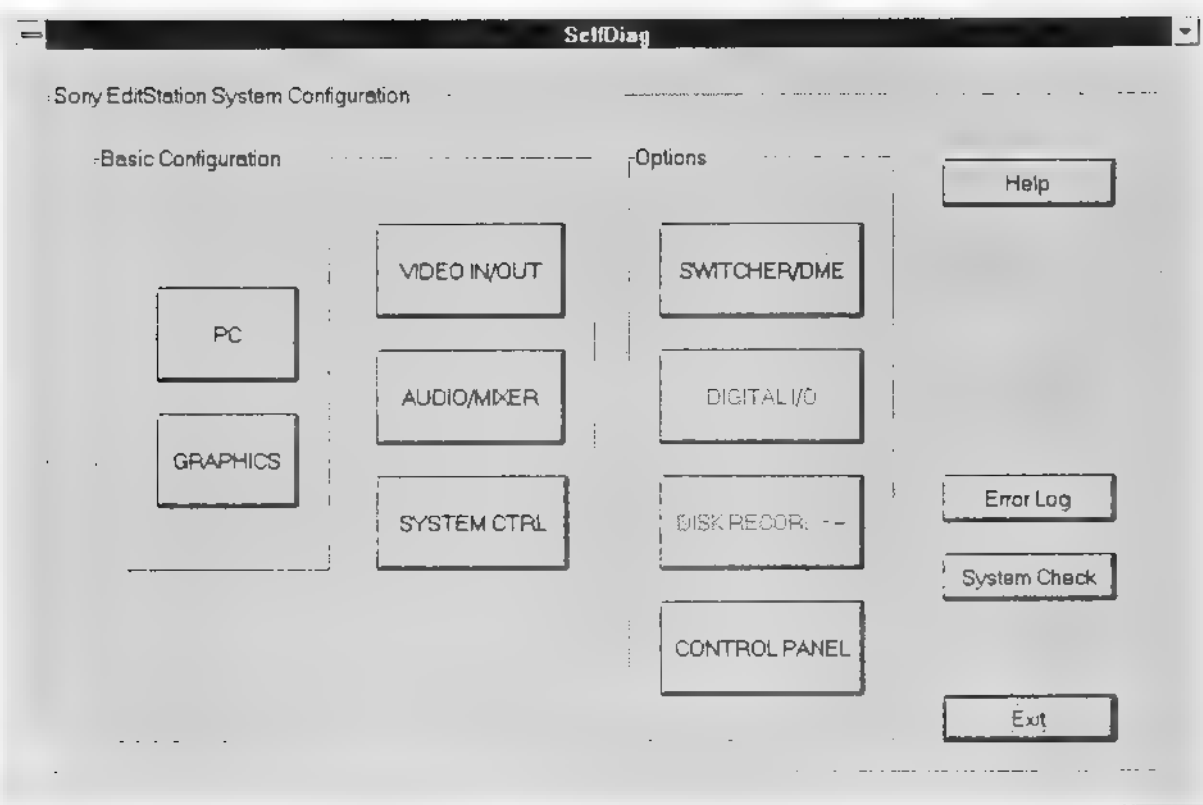

Double click the SelfDiag icon on the EditStation window of Program Manager, and SelfDiag program is started up.

When the program is started up, the window with indicating EditStation configuration diagram is opened.

The configuration diagram consists of two diagrams; that is "Basic Configuration" and "Optional Configuration" diagrams. The optional board(s) with installed is indicated with black characters. The optional board(s) without installed is indicated by characters with hatching.

To end the program, click the Exit button on the SelfDiag window.

For the boards installed in the EditStation, information about the following boards can be displayed.

#### Basic Configuration

- PC board
- Graphics board
- Video In/Out board
- Audio/Mixer board
- System Controller board

#### Optional Configuration

- Switcher/DME board
- Digital I/O board
- Disk Recorder board
- Control Panel

To display information about any board or to check status of any board, click the icon corresponding to the board.

To perform total test of the system, click the **System Check** button on the SelfDiag window.

The system executes checking the total system in a pre-arranged order, then the test result is displayed on a CRT screen as well as the test result is saved into a file.

Clicking the **Error Log** button on the SelfDiag window causes to display the results of tests executed by that time. It is also possible to print the results out.

**System Check**

### 3-3-2. Diagnosis on the Block Basis

#### (1) PC

Click the PC block icon on the SelfDiag window, and the window with indicating setup information about hardware and software on the PC board is opened

The following information about hardware and software is displayed on the PC Information window.

##### Hardware

###### Hardware information

Hardware information about PC unit

###### Memory information

Memory size and memory usage status

###### Video information

VGA card information

##### Software

###### OS information

Information about Windows NT

###### Driver information

Information about driver software version

###### Application information

Information about the application version

The screenshot shows a window titled "PC Information" with a tabbed interface. The "Hardware Information" tab is selected, showing details about the CPU, BIOS, hard disk, video, keyboard, and SCSI/EtherNet boards. The "Memory Information" tab is also visible, showing total and available memory and page file sizes. The "Video Information" tab shows device driver version, horizontal/vertical resolution, and color depth. The "OS Information" tab shows OS version, install date, owner, and computer name. The "Driver Information" tab shows versions for Syscon.sys, Sc2sqnrc.sys, Graphbrd.sys, and Vsync.sys. The "Application Information" tab shows versions for EditStation, TextComposer, FileConverter, SelfDiag, and ESDraw. An "Exit" button is located at the bottom right of the window.

Hardware Information	
CPU type	Intel Pentium
System BIOS Date	10/21/95
System BIOS Version	Award Plug and Play BI
Hard Disk Free / Total	
Video Mode	
Keyboard Type	
SCSI Board	
EtherNet Board	

Memory Information	
Total Memory Size	33,488,896
Available Memory Size	12,124,160
Total PageFile Size	70,156,288
Available PageFile Size	

Video Information	
Device Driver Version	
Horizontal Width	
Vertical Height	
Number of Colors	

OS Information	
OS Version	
Install Date	
Owner	
Computer Name	

Driver Information	
Syscon.sys	
Sc2sqnrc.sys	1.00
Graphbrd.sys	
Vsync.sys	

Application Information	
EditStation	
TextComposer	1.96
FileConverter	
SelfDiag	
ESDraw	

Exit

To close the PC Information window, click the **Exit** button on the PC Information window.

## (2) GRAPHICS

Click the GRAPHICS block icon on the SelfDiag window, and the window with checking graphics board is opened.

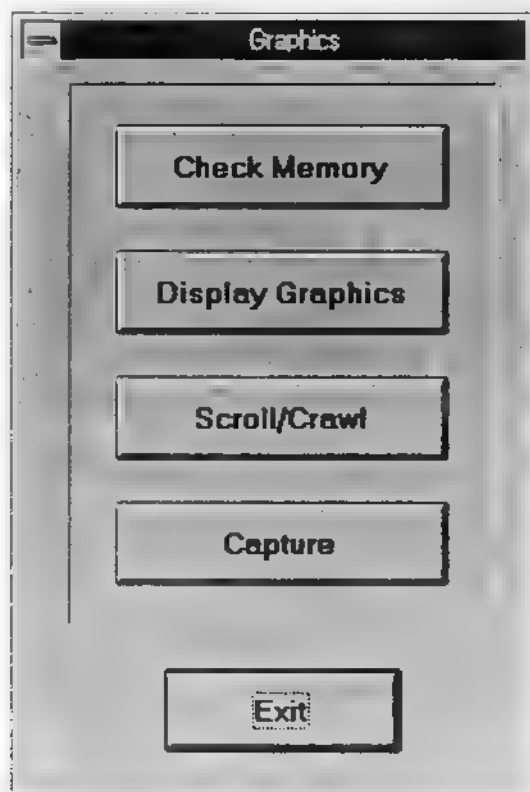

Check items are as listed below. Click the item icon which is required to check on the Graphics window.

Read/Write from/to memories

Displays graphics data.

Scroll/Crawl

Capture

To close the Graphics window, click the **Exit** button on the Graphics window.

### ●Check Memory button

Clicking the Check Memory button on the Graphics window causes the system to perform checking the memory on the graphics board. The memory is checked for a capacity of 4 MB in NTSC system, and for 6 MB in PAL system.

Memory size and memory addresses are displayed. Clicking the Start button on the Graphics VRAM Test window causes the system to start Read/Write checking of the specified memory size. When an error occurs during the checking, Error Count increments. Clicking the Cancel button on the Graphics VRAM Test window causes the system to stop checking the memory.

When the memory is completed to be checked, the result is displayed. To re-start checking the memory, click the Retry button on the Graphics VRAM Test window. To close the Graphics VRAM Test window, click the Exit button on the Graphics VRAM Test window.

### ●Display Graphics button

Clicking the Display Graphics button on the Graphics window causes the system to read graphics data and to display the data on a video monitor.

A dialog box is opened for reading a file. Select any file from the dialog box.

### ●Scroll/Crawl button

Using the data prepared beforehand, scrolling (up/down) and/or crawling (left/right) of window is performed by clicking the **Start** button on the Scroll/Crawl Test window.

When automatic mode is displayed in scrolling and/or crawling, the **Exit** button on the Scroll/Crawl Test window is disabled. When the **Cancel** button is clicked, scrolling and/or crawling stops. When the **Cancel** button is clicked, the Scroll/Crawl Test window is closed.

To close the Scroll/Crawl Test window, click the **Exit** button on the Scroll/Crawl Test window.

### ●Capture button

Clicking the Capture button on the Graphics window causes the system to capture the input source with selected currently. Two screen sizes are available to be selected : one is "Fixed", and the other is "Full Screen".

Clicking the **Start** button on the Capture Test window causes the system to start capture operation. When capture operation is started, the system displays the following capture screen, and menu command is also changed.

Clicking the **Full** button on the Capture Test window causes the system to start capturing the selected input source in Full Screen size. To return to the state before starting Full Screen capture operation, click the mouse or press any key on a keyboard.

Clicking the **Stop** button on the Capture Test window causes the system to stop the capture operation. To close the Capture Test window, click the **Exit** button on the Capture Test window.

### (3) VIDEO IN/OUT

Click the VIDEO IN/OUT block icon on the SelfDiag window, and the window for checking VIDEO board is opened.

From the window, it is possible to switch between the following check categories and to perform checking the operation.

- Input/output sources, signals
- Effect patterns
- Key signals

To close the VIDEO IN/OUT window, click the **Exit** button or the VIDEO IN/OUT block icon.

#### [Description of Commands in the Window]

A-BUS	Selects the video input to BackGround BUS
B-BUS	Selects the video input to ForeGround BUS
VIN1	Selects the video signal to Input 1 of Switcher <ul style="list-style-type: none"> <li>Analog Player1</li> <li>Analog Player2</li> <li>Analog Recorder</li> <li>Analog Auxiliary</li> <li>Digital Player1</li> <li>Digital Player2</li> <li>Digital Recorder</li> <li>Digital Auxiliary</li> </ul>
VIN2	Selects the video signal to Input 2 of Switcher <ul style="list-style-type: none"> <li>Analog Player1</li> <li>Analog Player2</li> <li>Analog Recorder</li> <li>Analog Auxiliary</li> </ul>

	Digital Player1
	Digital Player2
	Digital Recorder
	Digital Auxiliary
AP1 Format	Selects the video signal format of Analog Player1.
	Composite
	S-Video
	Component (Y/U/V)
AP2 Format	Selects the video signal format of Analog Player2.
	Composite
	S-Video
	Component (Y/U/V)
AR Format	Selects the video signal format of Analog Recorder.
	Composite
	S-Video
	Component (Y/U/V)
AUX Format	Selects the video signal format of Analog Auxiliary.
	Composite
	Y/U/V
	R/G/B
AUX Sync	When selected RGB format for video signal of Analog Auxiliary, selects whether to use Ext Sync In. or not.
	Int Sync    Uses Sync on G signal.
	Ext Sync    Uses Ext Sync In.
PGM OUT	Selects the video signal of PGM OUT
	Switcher Out
	Titler Key Out
PGM Format	Selects the video signal format of PGM OUT (Component out)
	Y/U/V
	R/G/B
MON OUT	Selects the video signal of Monitor Out (Component Out)
	PGM Out
	Titler Fill Out
	Titler Key Out
MONOUT FORMAT	Select the video signal format of Monitor Out (Component Out).
	Y/U/V
	R/G/B
FADER BAR	Fader bar for transition between A-BUS and B-BUS by pressing  button or  button (CUT (No.1059) only).

**(4) SYSTEM CONTROLLER**

Click the SYSTEM CTRL block icon on the SelfDiag window, and the window with indicating information such as software version of the board, result of self-diagnosis, and devices connected to the system is opened

This window indicates what connector is currently connected to the SYSTEM-M connector. Select the connector, then click the **TEST** button on the SYSTEM CONTROLLER window. Status of the connected device is checked.

To close the SYSTEM CONTROLLER window, click the **Exit** button on the SYSTEM CONTROLLER window.

## (5) AUDIO/MIXER

Click the AUDIO/MIXER block icon on the SelfDiag window, and the window with indicating information such as software version of the board, and result of self-diagnosis is opened. This window also can be used to perform checking the board.

The screenshot shows the 'AUDIO/MIXER' window. At the top, it displays 'System Version' and 'SelfDiag' fields. Below these are 'Input Source' options: ☒ PLAYER1, ☐ PLAYER2, ☐ AUX, ☐ DISK1, ☐ DISK2, ☐ FM1, and ☐ FM2. To the right are 'MON OUT2/4' and 'MON OUT1/3' options: ☒ PCM2, ☐ PCM4, ☐ REC2, ☐ REC4, ☒ PGM1, ☐ PGM3, ☐ REC1, and ☐ REC3. An 'Exit' button is located on the right. Below the input sources is the 'Output Channel' section, which is divided into four columns for CH-1, CH-2, CH-3, and CH-4. Each column contains a VU meter, FADER, TRIM, MUTE, PHASE, EQ LOW, EQ MID, EQ HIGH, and Level/Freq sliders. The 'EQ' section for each channel has a 'QVALUE' checkbox and a 'HIGH' label. The 'Level' and 'Freq' sliders are present for each frequency band.

To close the AUDIO MIXER window, click the Exit button on the AUDIO MIXER board

## [Description of Commands in the Window]

Input Source	Selects Input Source. PLAYER1 (4 Channel) PLAYER2 (4 Channel) AUX (2 Channel) DISK1 (4 Channel) DISK2 (4 Channel) FM1 (1 Channel) FM2 (1 Channel)
MON OUT2/4	Selects Monitor Out (2/4).
MON OUT1/3	Selects Monitor Out (1/3).
Output Channel	
VU	Displays VU level (bar and value).
FADER	Sets up Fader level (0 to 1023).
TRIM	Sets up Trim level (0 to 15 to 30).
MUTE	Turns Mute function ON or OFF.
PHASE	Turns Phase function ON or OFF.
EQ	Turns Equalizer function ON or OFF. EQ => ON:LOW, MID, HIGH values became valid.
Level	Level value (0 to 15 to 30)
Freq:	Frequency (0 to 255)
QVALUE	Sets Qvalue ON or OFF (MID only).

## (6) SWITCHER/DME

Click the SWITCHER/DME block icon on the SelfDiag window, and the window with indicating information such as software version of the board, result of self-diagnosis, and board configuration including options is opened.

The screenshot shows a window titled "DME/SWITCHER" with a dark header bar. The window is divided into several sections:

- Configuration:** A list of options with checkboxes:
  - ☐ BASIC (ESBK-7021)
  - ☐ BAS\_3D (ESBK-7022)
  - ☒ ADVANCE (ESBK-7023)
  - ☒ ADV\_3D (ESBK-7024)
  - ☐ EXT Sw'er (ESBK-7025)
- Software Information:** A table showing version numbers:

SWC Version	0.51
EFC Version	0.64
DT1 Version	0.82
DT2 Version	0.00
- SelfDiag:** A table showing the results of self-diagnosis checks:

RAM Check	GOOD
ROM Check	GOOD
DPM Check	GOOD
VD Check	GOOD
COM Check	GOOD
- Buttons:** Two buttons are located on the right side of the window:
  - "Manual Check"
  - "Exit"

To close the DME/SWITCHER window, click the **[Exit]** button on the DME/SWITCHER window.

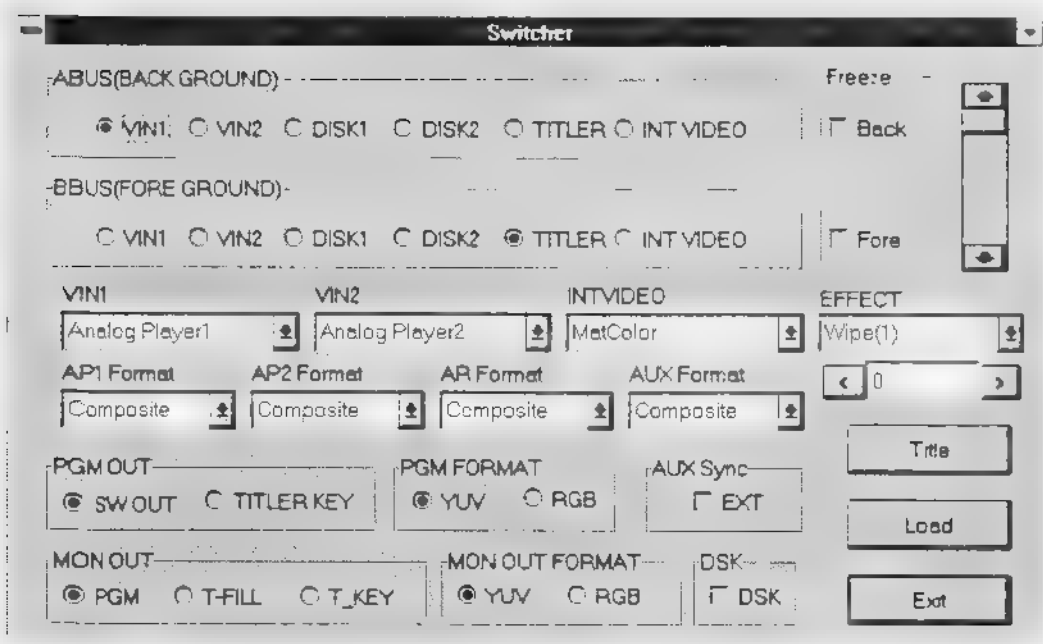

Clicking the **Manual Check** button on the DME/SWITCHER window causes the system to check the switcher board manually. From the window, it is possible to switch between the following check categories, and to confirm the board operation

- Input/Output sources, signals
- Effect patterns
- Key signals

If a Control Panel was connected to the EditStation at the start of the checking, the system asks an operator whether to enable Fader Lever built in the check program or not.

To enable Fader Lever built in this check program, click the **Yes** button on the SelfDiag window. To disable Fader Lever built in the check program and to enable the fader lever located on the Control Panel, click the **No** button on the SelfDiag window.

## [Description of Commands in the Window]

A-BUS	Selects the video input on BackGround BUS.
B-BUS	Selects the video input on ForeGround BUS.
Freeze	Sets Video Freeze (Field) function of BackGround/ForeGround Bus ON or OFF.
VIN1	Selects the video signal of Input 1 of the switcher. Analog Player1 Analog Player2 Analog Recorder Analog Auxiliary Digital Player1 Digital Player2 Digital Recorder Digital Auxiliary
VIN2	Selects the video signal of Input 2 of the switcher. Analog Player1 Analog Player2 Analog Recorder Analog Auxiliary Digital Player1 Digital Player2 Digital Recorder Digital Auxiliary
INTVIDEO	Selects Internal Video. MatColor ColorBar Grid Black
AP1 Format	Selects the video signal format of Analog Player1. Composite S-Video Component (Y/U/V)
AP2 Format	Selects the video signal format of Analog Player2. Composite S-Video Component (Y/U/V)
AR Format	Selects the video signal format of Analog Recorder. Composite S-Video Component (Y/U/V)
AUX Format	Selects the video signal format of Auxiliary. Composite Y/U/V R/G/B
AUX Sync	When selected RGB format for Auxiliary video signal, selects whether to use Ext Sync In or not. Int Sync .... Uses Sync on G signal. Ext Sync ..... Uses Ext Sync In signal.
PGM OUT	Selects the video signal of PGM OUT. Switcher Out Titler Key Out

PGM Format	<p>Selects the video signal format of PGM OUT (Component Out).</p> <p>Y/U/V</p> <p>R/G/B</p>
MON OUT	<p>Selects the video signal of Monitor Out (Component Out).</p> <p>PGM Out</p> <p>Titler Fill Out</p> <p>Titler Key Out</p>
MONOUT FORMAT	<p>Selects the video signal format of Monitor Out (Component Out).</p> <p>Y/U/V</p> <p>R/G/B</p>
DSK	Turns DSK ON or OFF.
FADER BAR	<p>Fader Bar for transition between A-BUS and B-BUS with an Effect by pressing  button or  button.</p> <p>(When Control Panel was connected to the system, it is possible to disable this fader bar.)</p>
EFFECT	<p>Selects an Effect Pattern (a typical pattern per pattern category).</p> <p>Effect No. corresponding to such Effect Pattern is indicated in a box located under the Effect Pattern.</p> <p>It is also possible to select Effect Numbers</p>

When setting to the Title mode (that is, cutting ForeGround video out with Key Source signal, and inserting characters or graphics onto BackGround video), click the **Title** button on the Switcher window, and the window with setting to various modes is opened

**Title**

**TITLE**

☒ OFF    ☐ LUM    ☐ EXT  
☐ CRK    ☐ LUM + CRK

**FILL**

☒ SELF    ☐ BORDER    ☐ SHADOW

**MASK**

☒ OFF    ☐ NORMAL    ☐ INVERT

**INVERT**

☒ NORMAL    ☐ INVERT

**CLIP LEVEL**

**CRK HUE**

**CRK CLIP**

**Exit**

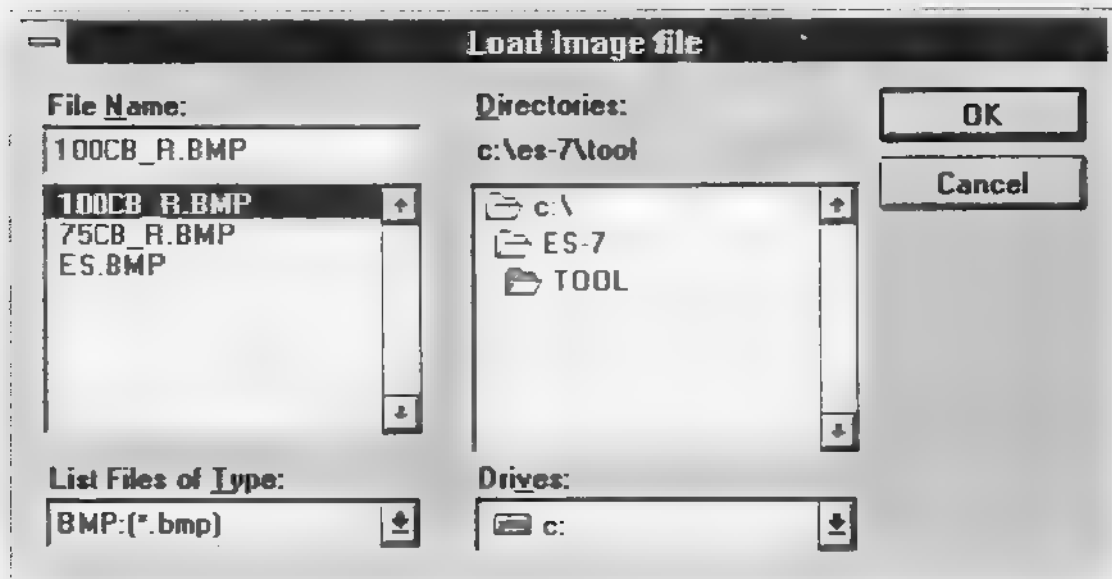

## [Description of Commands in the Window]

TITLE	Selects Key Source signal for Title Key
	OFF ..... Disables Title key function.
	LUM ..... Luminance Key (keying is done in reference to luminance level of Key signal)
	EXT ..... External Key (external key source is used)
	CRK ..... Chromakey (keying is done in reference to specific hue in Key signal)
FILL	LUM+CRK ... Luminance Key + Chromakey
	Selects a signal to fill the hole cut out by Key Source signal
	SELF
	BORDER
	SHADOW
MASK	Sets up when to mask a part of the hole cut out by Key Source signal.
	ON
	NORMAL
	INVERT
INVERT	Sets up when to invert the polarity of Key Source signal
	NORMAL
	INVERT
Clip Level	Sets up Clip Level when Luminance Key is ON (00 to FFh)
CRK HUE	Sets up Hue for Chromakey (00 to FFh)
CRK OFFSET	Sets up Chromakey Offset (00 to FFh)

When reading graphics data, click the **[Load]** button on the Switcher window. A dialog box is opened for reading a file. Select a file from the dialog box.

By selecting ITTLER on A-BUS/B-BUS or by turning DSK ON, it is possible to view the Graphics data on a video monitor.

## (7) CONTROL PANEL

Click the CONTROL PANEL block icon on the SelfDiag window, and the window with indicating information such as software version of CONTROL PANEL, and result of self-diagnosis is opened. The window is also used to check operation of various switches.

The screenshot shows the 'CONTROL PANEL' window with the following sections:

- EPROM Check SUM:** 3000
- RAM Read/Write Check:** 3000
- Shuttle:** 0
- Video Fader:**
  - Range: 0
  - Position: 0
- Audio Fader:**
  - 1: 0
  - 2: 0
  - 3: 0
  - 4: 0
- Volume:**
  - 1: 0
  - 2: 0
  - 3: 0
  - 4: 0
- Key Switch:**
  - ☐ MKIN KEY
  - ☐ MKOUT KEY
  - ☐ STILL KEY
  - ☐ PLAY KEY
  - ☐ F1 KEY
  - ☐ F2 KEY
  - ☐ F3 KEY
  - ☐ F4 KEY
  - ☐ ALLSTOP KEY
- Device Select:**
  - ☒ Device None
  - ☐ VTR Recorder
  - ☐ VTR P1
  - ☐ VTR P2
  - ☐ VTR AUX
  - ☐ DR REC
  - ☐ DR P1
  - ☐ DR P2
- Key Mask:**
  - ☐ AUDIO
  - ☐ VOLUME
  - ☐ VIDEO
  - ☐ JOG
  - ☐ MARK IN
  - ☐ MARK OUT
  - ☐ STILL
  - ☐ PLAY
  - ☐ F1
  - ☐ F2
  - ☐ F3
  - ☐ F4
  - ☐ ALL STOP

Buttons: MASK, Exit

To close the CONTROL PANEL window, click the Exit button on the CONTROL PANEL window.

### [Description of Commands in the Window]

Video Fader	Indicates the value of Transition Lever.
Audio Fader	Indicates the value of Slider Fader (1 to 4)
Volume	Indicates the value of volume control (1 to 4)
Jog/Shuttle	Indicates the value of Jog/Shuttle dial.

Key Switch	When pressed ■ key switch, it is marked. When released the key switch, the mark extinguishes.
Device Select	Selects VTRs to which Control Panel provides independent control.
Key Mask	Setup of Keying area to be disabled when performed control from Control Panel

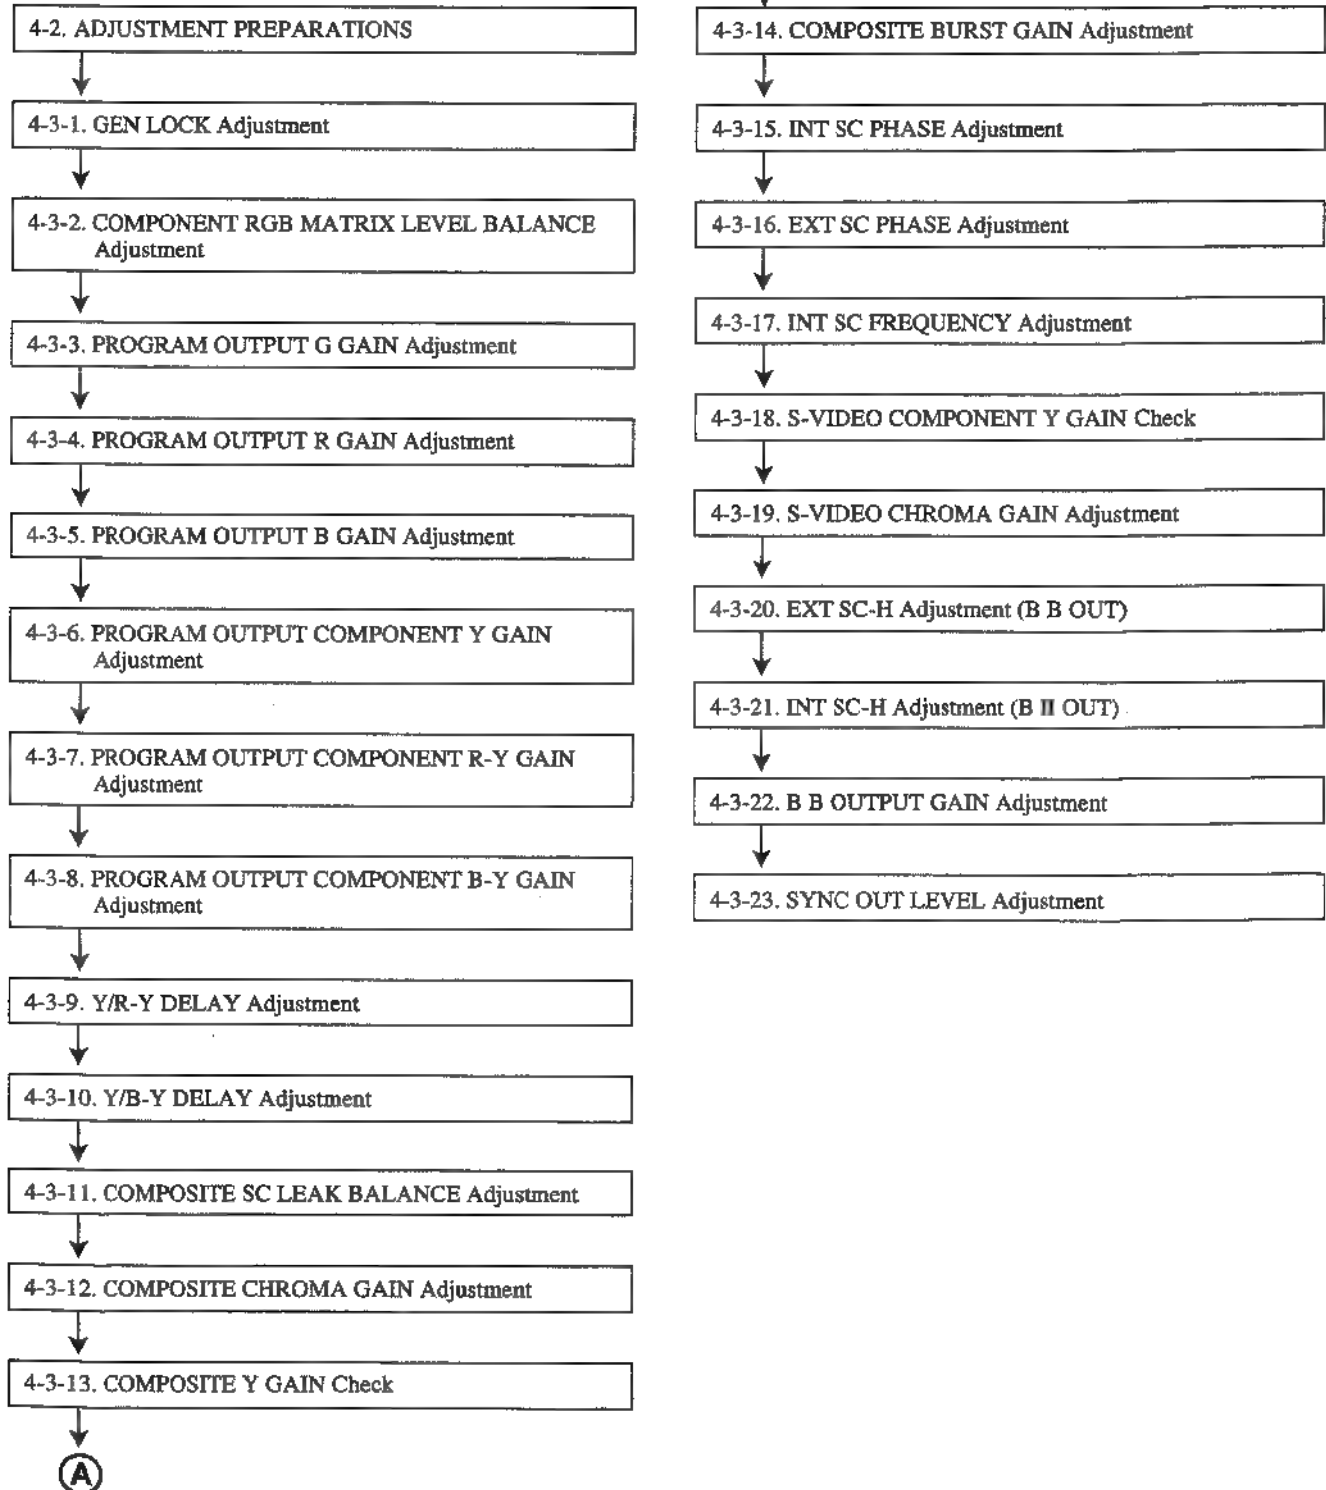

## SECTION 4

### ELECTRICAL ALIGNMENT

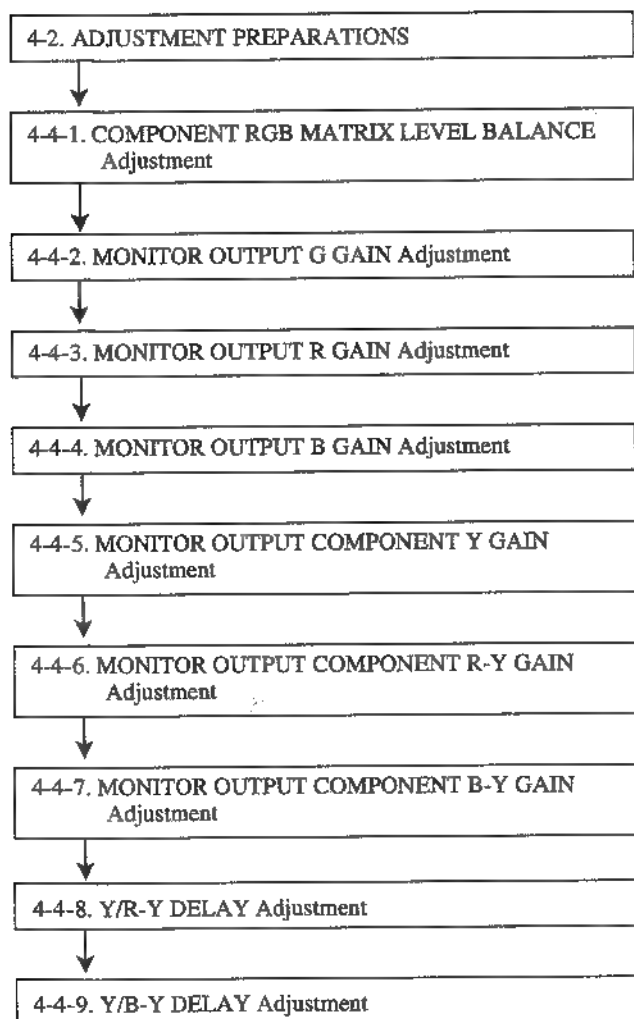

#### 4-1. ADJUSTMENT SEQUENCE

##### DA-95 Board Adjustment

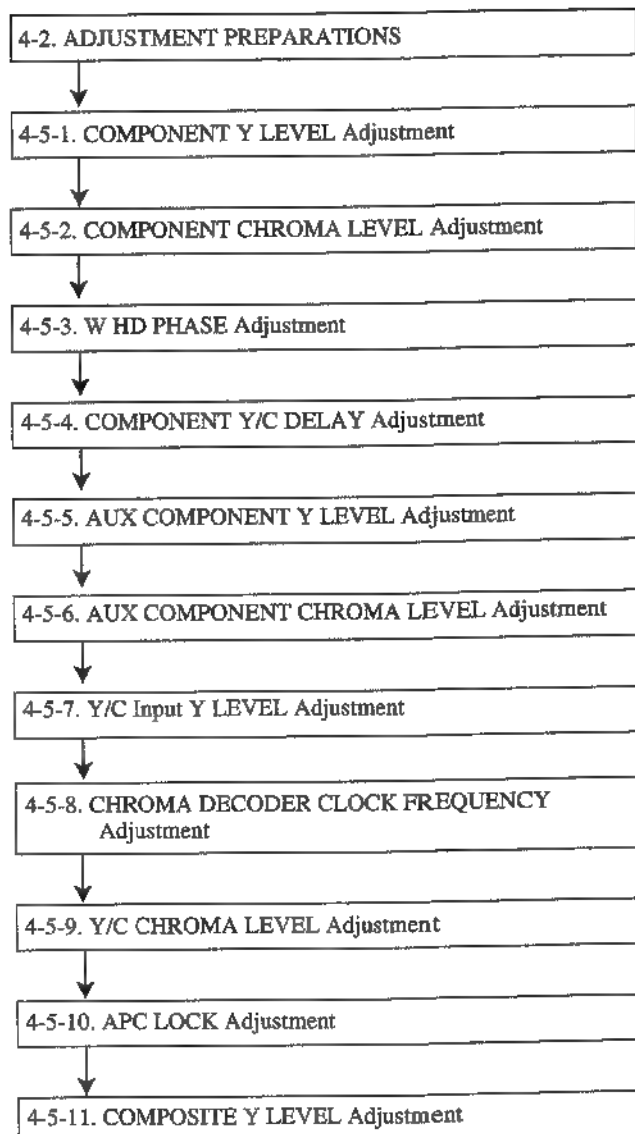

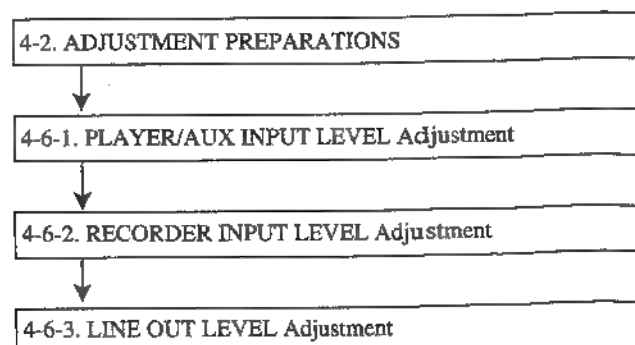

## DAC-20 Board Adjustment

## AD-115 Board Adjustment

## AU-217 Board Adjustment

## 4-2. ADJUSTMENT PREPARATIONS

### 4-2-1. Connection

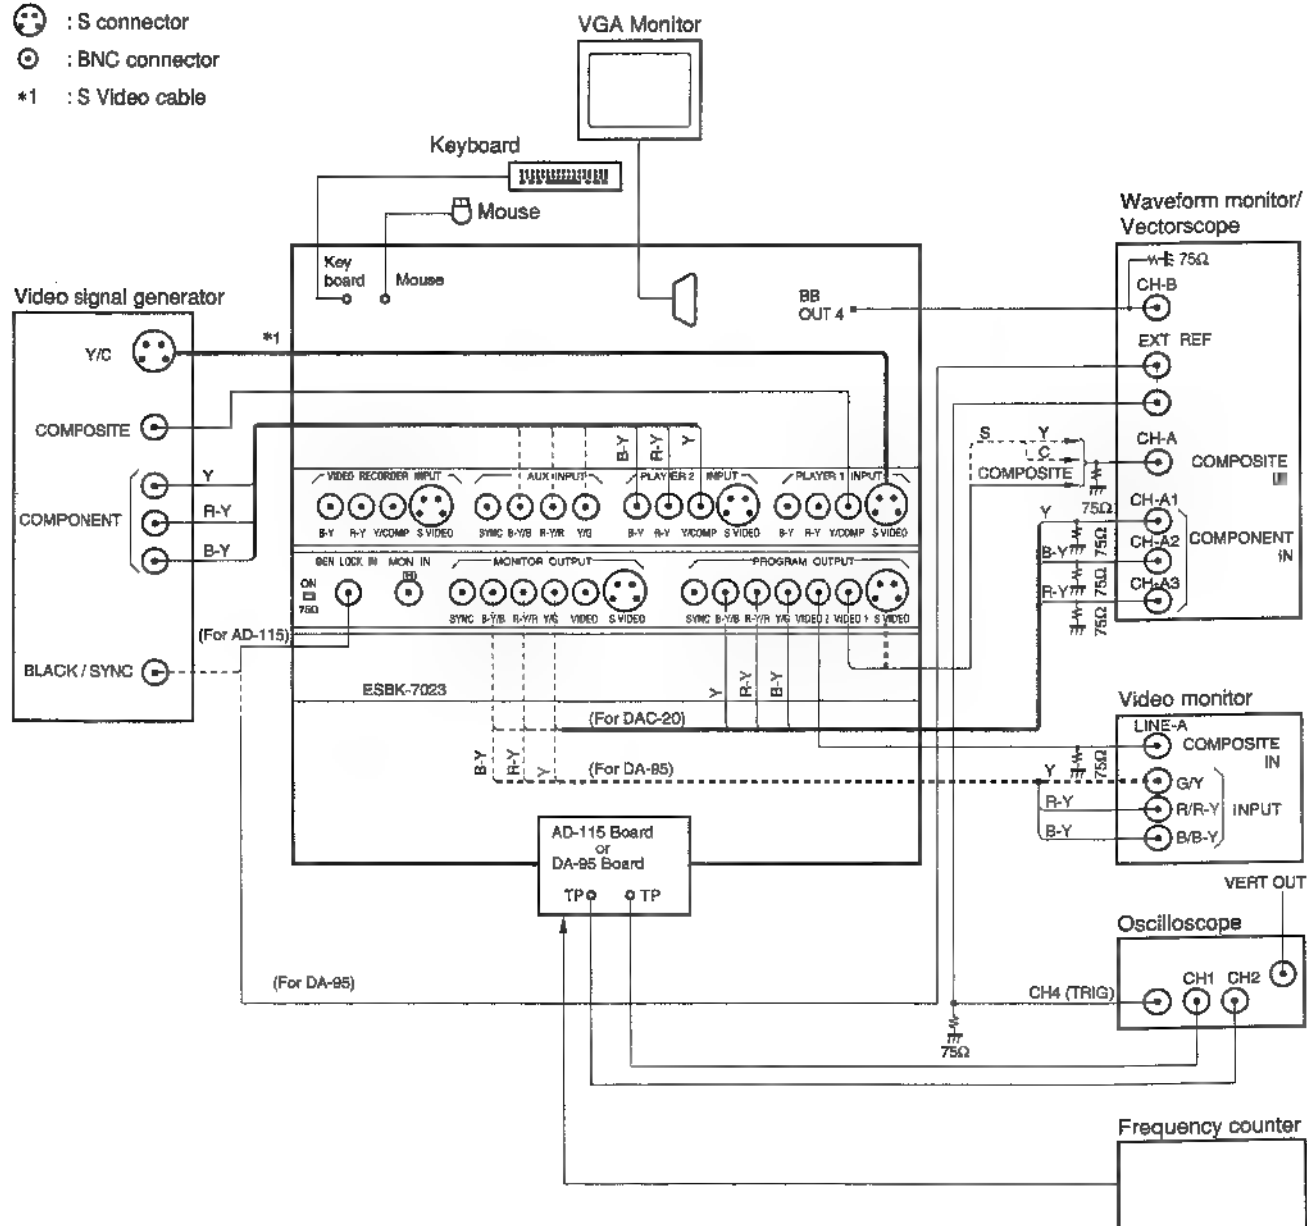

#### 1. Connection in adjustment of DA-95/DAC-20/AD-115 board.

Connect the equipments as follows;

⊙ : S connector

⊙ : BNC connector

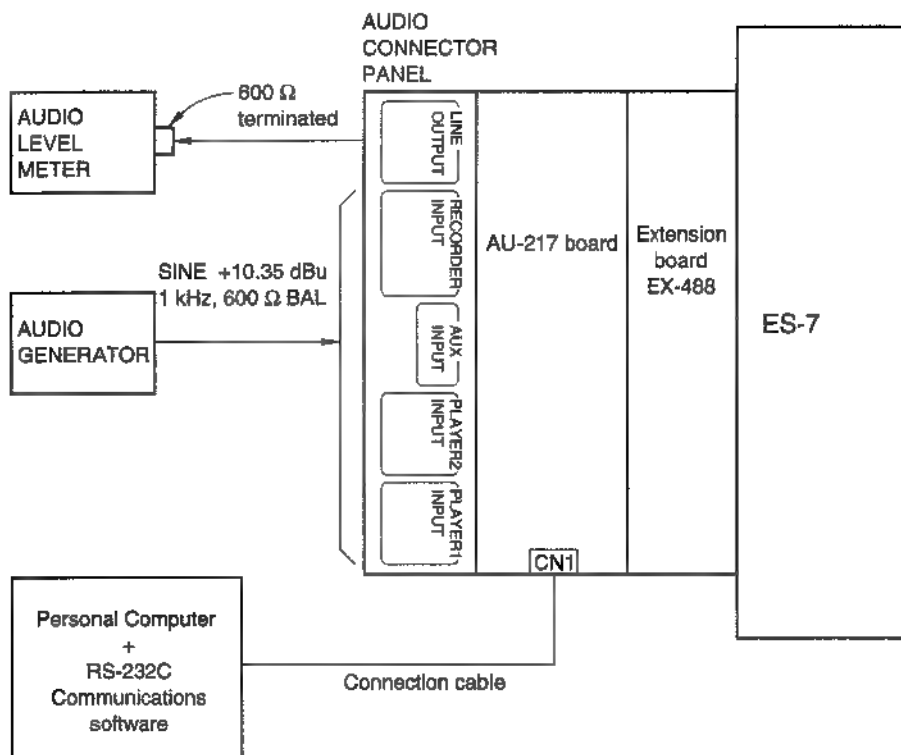

\*1 : S Video cable

2. Connection in adjustment of AU-217 board.

Connect the equipments as follows;

\* To connect a personal computer and AU-217 board, make the following cable.

## 4-2-2. Tools/Measuring Equipments

1. Video Signal Generator  
Equivalent: TSG 130A(NTSC)/Tektronix  
TSG 131A(PAL)/Tektronix
2. Oscilloscope  
Equivalent: 2445/Tektronix
3. Waveform Monitor and Vectorscope  
Equivalent: 1765/Tektronix
4. Video Monitor  
Equivalent: PVM1444Q/Sony
5. Frequency Counter  
Equivalent: 5315/Hewlett Packard
6. Digital Voltmeter  
Equivalent: 3435A/Hewlett Packard
7. Video Cable (S-BNC)  
Sony Parts No.: J-6381-380-A
8. Extension Board (EX-488)  
Sony Part No.: J-6441-950-A
9. Audio Signal Generator  
Equivalent: 8944/Hewlett Packard
10. Audio Level Meter  
Equivalent: 3400A/Hewlett Packard
11. Personal Computer bundled with RS-232C communications software
12. Connection Cable (to connect a personal computer and AU-217 board)

## 4-2-3. Built-In Color Bars

Select a built-in color bar by using the GUI (Graphical User Interface) function built in the ES-7.

How to select a built-in color bar

1. Turn on the power of the ES-7 and a personal computer in order.
2. Start the system.
3. Double click the SelfDiag icon in the Sony EditStation group.
4. Click the SWITCHER/DME icon.
5. Click the MANUAL CHECK icon.
6. According to the board required to be adjusted, select the directory as follows;

DA-95 board

A BUS (BACK) = TITLER

■ BUS (FORE) = TITLER

PGM OUT = SW OUT

DSK = ☐ (not checked)

DAC-20 board

A BUS (BACK) = TITLER

■ BUS (FORE) = TITLER

PGM OUT = SW OUT

MONI OUT = T-FILL

DSK = ☒ (checked)

AD-115 board

A BUS (BACK) = VIN1

B BUS (FORE) = TITLER

7. Select the directory as shown in the GUI setting of each adjustment item.
8. Click the LOAD button.
9. Select the directory C:\SERVICE.
10. Select the directory of 75CB\_R.VPR, 100CB\_R.VPR or BOWTIE.VPR from the list. Then, click the OK button.

**Note:** Select the directory as shown in the GUI setting of each adjustment item.

## SECTION 5 BLOCK DIAGRAMS

### 5-1. OVERALL

## 5-2. Operations/Functions of Circuit Boards

### 5-2-1. ANALOG VIDEO Input/Output

#### <AD-115 Board>

AD-115 board has several functions, that is; (a) selects 2 channels of video signals out of 4 input video channels, i.e., Player-1 and -2, Recorder (Y/R-Y/B-Y, Composite, S VIDEO) and AUX (Y/R-Y/B-Y, G/B/R, Composite); (b) digitizes the selected video signals into 4:2:2 component format (Y: 13.5MHz, R-Y/B-Y: 6.75MHz); and (c) outputs the digitized video signals to DME/Switcher Board as V IN 1 and V IN 2 signals. To achieve above, AD-115 board is equipped with 2 channels of Y/C separation circuits and Chroma Decoder circuits for composite signal processing. Although the system has frame synchronizer function as a whole to accept asynchronous video signals as V IN 1 and V IN 2 signals, AD-115 board itself has only a write clock generator circuit for the frame synchronizer function above, and outputs the digital video signal, the write clock signal and the sync signal to the frame memory on DME/Switcher Board.

In addition, AD-115 board outputs Recorder's S VIDEO signal to DA-95 board for monitoring.

#### <DA-95 Board>

DA-95 board consists of two blocks of circuits, i.e., a sync signal generator block and video signal processing circuit block. The sync signal generator block consists of a Gen Lock Generator, a Sync Generator, and a System Clock Generator, etc. This block generates/outputs HD, VD, O/E and Clock signals to be used as the sync signal in the video signal processing circuit on this board as well as in other circuit boards of the main unit of Edit Station. This block also outputs Black Burst signal to external devices.

The video signal processing circuit block consists of a D/A converter, component system circuits and composite system circuits. This block outputs Y/R-Y/B-Y, RGB and composite video signals. A signal selector is used to select Y/R-Y/B-Y or RGB signals as component outputs. Addition of DAC-20 board (an optional board) allows TITLER (GRAPHICS Board) video to be output from Component OUT (Monitor-OUT) terminal.

### 5-2-2. AUDIO

#### <AU-217 Board>

This is the audio mixer board. It consists of an A/D converter, a DSP, a D/A converter and a MPU to control these signal converters and DSP. Analog input signal passes the A/D converter before it is input to the DSP. On the other hand, digital input signal receives format conversion in an optional digital I/O board before it is input to the DSP. The DSP performs processing of input audio signals. Output signal from the DSP passes the D/A converter and is output as an audio signal. Output signal from the DSP also receives format conversion in the optional digital I/O board before it is output. Both analog input and output signals are balanced type.

### 5-2-3. SYSTEM CONTROL

#### <SY-219 Board>

SY-219 is the system control board of SONY Edit Station ES-7, and in accordance with commands sent from PC block, it performs control to a DME switcher, an audio mixer, a disk recorder, a QSDI (SDI) I/F, character superimpose operation in D/A board, the control panel, GPI (RS-232C), GPI (PARALLEL), and four units of VTRs.

Control functions mentioned above are performed by the main CPU (TMP68301A with 128KB PROM, 512KB Flash Memory and 512KB RAM) except those to serial communication with the VTRs. Control to serial communication with the VTRs is performed by the sub-CPU (Z84015 with 32KB PROM).

The main CPU uses a 4KB Dual-Port memory for communication with PC block and a 2KB dual-port memory for communication with the sub-CPU. The main CPU also uses Dual-Port memories for communication with DME Switcher, the audio mixer, the disk recorder, and QSDI (SDI) I/F. These memories, however, are installed on the boards of destination of communication and memory spaces up to 16 KB are provided to each destination. FRAME signal, FLD1 signal and EXT LOCK signal are also supplied from D/A board as the timing signals.

## 5-2-4. GRAPHICS BOARD

### <VPR-18 Board>

VPR-18 is a frame memory board, and is connected to "CPU BLOCK" through PCI bus. This board is able to control ■ video memory with the capacity of 2 video frames.

Video signal output from VPR-18 is in 4:2:2:4 format, and is sent to the titler input and to DSK input of "DME SW'ER OPTION". Since the output video signal is also sent to "DAC-20 board", it is possible to check "ES DRAW" video on the component terminals of Monitor output by changing operating mode while other video is being output to PGM output. Video input signal is in 4:2:2 format, and is input from "DME SW'ER OPTION".

### <DSC-75 Board>

DSC-75 is ■ video memory board connected to VPR-18 board. A memory with capacity of 2 video frames (NTSC or PAL system) is installed on this board.

Size of the memory installed to DSC-75 board differs between NTSC and PAL, that is, 3MB in NTSC system and 4.5 MB in PAL system.

### <BF-54 Board>

BF-54 board is the interface between SY-219 board and the PC.

To accelerate the operation of Dual-Port RAMs mounted on SY-219 board from the PC side, this board consists of an address decoder block and an address/data buffers block. Addresses of these Dual-Port RAMs as seen from the PC can be changed using a jumper (JP1) located on BF-54 board. Interrupt (two levels) from SY-219 board is mapped as IRQ of ISA signal sent from the PC. Address of the IRQ also can be changed using jumpers (JP2, 3).

## 5-2-5. CPU BLOCK

CPU BLOCK is constructed around PC board to which an Intel Pentium processor is installed. A VGA Board, a GRAPHICS Board, and BF-54 board are installed to PCI/ISA CARD SLOTS on PC board. In addition, a SCSI Interface board (ESBK-7051) and an Ethernet board (ESBK-7052) are installed as options. Also, a Hard Disk Drive, a 3.5" Floppy Disk Drive, and a CD-ROM drive are installed as the external memory devices

## 5-2-6. POWER SUPPLY

### <RE-122 Board>

RE-122 is the power regulator board. The input AC power is rectified to DC before applied to the primary circuit of a DC-DC converter. A circuit for power factor improvement is incorporated in this primary circuit. Secondary circuit of the DC-DC converter consists of two major blocks; the first block produces +5V DC output, and the second one produces +12V DC output. Voltages other than +5V and +12V such as -5V, +6.5V, -7V, +18V, -18V and -12V are obtained from voltage regulators connected to +12V line of secondary circuit of the DC-DC converter. In addition, this board provides a function for flashing the power indicator LED when detected the cooling fan stop signal sent from a sensor.

## 5-2-7. MISCELLANEOUS

### <FP-74 Board>

On this board, a headphone amplifier, a headphone jack, and a potentiometer for audio volume control are installed.

### <LE-154 Board>

This is the board on which the power indicator LED is mounted.

### <CN-1242 Board>

This is the board on which BNC type connector for the reference video output signal is mounted.

### <CN-1237/1238 Board>

This board is used for mounting of audio signal connectors, and is mounted at the rear of audio connectors located on lower portion of the rear panel.

### <MB-639 Board>

This is the mother board for connection of all the boards of the system.

## 5-2-8. DME SW'ER OPTION

### • ESBK-7021

#### <FM-43 Board>

The frame synchronizer block located on FM-43/A board performs synchronization of 2 channels of digitized asynchronous video signals sent from boards such as AD-115/A, IO-119, etc. with the reference signal generated in DA-95/A board, and outputs the video signals on FRGD BUS and BKGD BUS to MY-74 board.

Operation of the frame synchronizer block is controlled by setting up values to registers using the Effects CPU in the CPU block on this board.

#### <MY-74 Board>

MY-74 board contains a 2-field memory for Y/B-Y/R-Y signal format (4:1:1, 8 bits each). This board sequentially writes the picture data sent from FM-43/A board into this memory using the counter address generated in this board. Next, the boards reads the transformed picture from the memory using a 2D ADDRESS GENERATOR (IC134) and the addresses supplied from PU-84 board. The data thus read receives digital processing such as linear interpolation of data, bit masking, negative inversion, etc., in DATA INTERPOLATER (IC312 to IC315) then is Mix/Effects processed with both BKGD picture sent from FM-43/A board and DSK picture sent from VPR-18 board before it is output to DA-95/A board as the processed video signal.

### • ESBK-7022

#### <PU-84 Board>

PU-84 board performs operation to memory read address to achieve various Effects such as 3D Linear, Page Turn, Twist, Sphere, Wave Modulation, etc., and outputs the result of operation to MY-74 board.

Operation of PU-84 board is controlled by setting up values to the registers on this board using the Effects CPU located on FM-43/A board.

### • ESBK-7023

#### <FM-44 Board>

FM-44 board consists of a CPU block and a Switcher block. CPU block contains MAIN CPU, EFFECTS CPU, WORK RAM, PROGRAM ROM, EFFECTS ROM, etc., and performs system control and Effects execution in DME block. It also acts as the interface between this board and the CPU on SY-219 board. The Switcher block performs the first half of video signal processing functions of DME Switcher consisting of FM-44, MY-75 and VE-33 boards. This block has several functions, that is; (a) selects 2 channels of video signals out of 5 channels of input video signals sent from various boards such as AD-115, IO-119, RP-89, VPR-18, etc., (b) locks the selected video signals to the sync signal generated in DA-95 board, and (c) outputs these video signals to MY-75 board as FRGD BUS and BKGD BUS video signals. The block also generates LUMINANCE KEY and CHROMA KEY signals using the video signal of FRGD BUS as KEY SOURCE, and outputs one of them to MY-75 board as FRGD BUS KEY signal.

#### <MY-75 Board>

MY-75 board contains (a) Wipe Processing block to perform cutting of FRGD picture data using a Wipe pattern, (b) a Transform Processing block with DME, and (c) a M/E block to synthesize FRGD picture data with BKGD picture data sent from FM-44 board. MY-75 is also equipped with ■ 3D Transform Processing block and ■ Lighting/Trail Processing block to be enabled when installed optional VE-33 board.

### • ESBK-7024

#### <VE-33 Board>

VE-33 board contains (a) an Address Generator block to perform various Effects such as 3D Linear, Page Turn, Twist, Sphere, Wave Modulation, etc., (b) a Lighting block to add Lighting Effects to the picture, and (c) ■ Trail block to produce afterimage Effects. VE-33 board outputs the results of operation above to MY-75 board. Operation of VE-33 board is controlled by setting up values to various registers on VE-33 board using the Effects CPU located on FM-44 board.

### • ESBK-7025

ESBK-7025 consists of a 9-Pin Interface board (IF-547) to perform control to DFS-300/500, and DAC-20 board to output KEY OUT/KEY FILL signals (generated in a video titler built in ES-7 system) to PROGRAM OUT/MONITOR OUT terminals.

## 5-2-9. NON-LINEAR OPTION

### • ESBK-7041

#### <MPU-95 Board>

MPU-95 board consists of a CPU circuit to control non-linear editing operation. The CPU circuit contains (a) a "HDD CPU" which mainly controls the hard disk, (b) a "sub-CPU" which performs control to RP-89 board and timing management, and (c) a "bus CPU" which controls operation of the internal bus through which video/audio information for non-linear editing is passing to and fro.

In addition, 4 channels of SCSI connectors are mounted on MPU-95 board to directly interface with the hard disk for non-linear editing to achieve non-linear editing function together with RP-89 board.

#### <RP-89 Board>

RP-89 board consists of a Video block and an Audio block. The Video block converts the component video signal sent from MY-74 or MY-75 board into component 4:1:1 format (4:2:0 in PAL system) signal for signal compression. The compressed signal data is transferred to MPU-95 board through a compression data bus.

The board also expands the video data transferred from MPU-95 board through a compression data bus into component 4:2:2 format signal to send it to FM-43 or FM-44 board.

The Audio block performs frequency conversion of the audio signal data sent from AU-217 board, and sends it to MPU-95 board through a compression data bus.

The board also performs frequency conversion of Audio data sent back from MPU-95 board through a compression data bus, and sends it to AU-217 board.

## 5-2-10. DIGITAL I/O OPTION

### • ESBK-7031

#### <IO-119 Board>

IO-119 board has three types of inputs/output, i.e., QSDI IN/OUT, AES/EBU input, and IEC-958 input.

QSDI block receives QSDI input sent from DCR VCR, performs 12 -> 16 conversion of Audio data (in the case of 32k 4ch. data), de-interleaves the data, then transfers the data to MPU-95 board through a compression data bus.

The board also performs 16 -> 12 conversion and interleave processing to Audio data transferred from MPU-95 board, and outputs QSDI output to DCR VCR. The board selects one of audio data out of AES/EBU/IEC-958 blocks, and sends the audio data to AU-217 board.

### • ESBK-7032

#### <IO-148 Board>

IO-148 board is mounted on IO-119 board. IO-148 board receives SDI input, and sends the video data to FM-43 or FM-44 board and the audio data to AU-217 board.

The board outputs the video data sent back from FM-43 or FM-44 board and the Audio data sent back from AU-217 board to SDI terminals as SDI output.

## 5-2-11. ES DRAW

### • ESBK-7071

#### <DAC-20 Board>

DAC-20 board consists of circuits similar to D/A converter block and component signal processing circuits of video signal system in DA-95 board, and outputs the digital video signal sent from TITLER (GRAPHICS Board) in analog, Y/R-Y/B-Y or RGB signal format.

## SECTION 7

### SPARE PARTS AND OPTIONAL FIXTURES

#### 7-1. NOTES ON SPARE PARTS

##### (1) Safety Related Components Warning

Components identified by shading marked with  $\Delta$  on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose parts numbers appear as shown in this manual or in service manual supplements published by Sony.

##### (2) Standardization of Parts

Replace Parts that are supplied from Sony Parts Center can sometimes have different shape and external appearance than what are actually used in equipment. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts."

##### (3) Stocked of Parts

The parts marked with "S" in the SP column of the exploded views and electrical spare parts list are normally required for routine service work. Orders for parts marked with "O" will be proceed, but allow for additional delivery time.

##### (4) Units of Capacitors, Inductors, and Resistors

The following units are omitted in the schematic diagrams exploded views, and electrical part lists unless otherwise specified;

Capacitor :  $\mu\text{F}$

Inductor :  $\mu\text{H}$

Resistor :  $\text{W}$

#### 7-1. 補修用部品注意事項

##### (1) 安全重要部品

回路図、分解図、電気部品表中、 $\Delta$ 印の部品は安全性を維持するために重要な部品です。従って、これらの部品を交換するには必ず指定の部品と交換して下さい。

##### (2) 部品の共通化

ソニーから供給される部品はセットに実装されているものと異なることがあります。これは部品の共通化、改良等によるものです。分解図や電気部品表中には現時点での共通化された部品が記載されています。

##### (3) 部品在庫

SP (Supply code) 欄が"O"で示されている部品は交換頻度が低い部品であるので在庫しないことがあり、納期が長くなることがあります。

##### (4) コンデンサ、インダクタ、抵抗の単位

回路図、分解図、電気部品表中、特に明記したものを除き、下記の単位は省略されています。

コンデンサ :  $\mu\text{F}$

インダクタ :  $\mu\text{H}$

抵抗 :  $\text{W}$

### 7-3. ELECTRICAL PARTS LIST

#### AD-115 BOARD(ES-7(UC/J))

Ref. No.  
or Q'ty Part No. SP Description

1pc A-8273-935-A ■ MOUNTED CIRCUIT BOARD, AD-115  
The mounted circuit board includes the following safety related parts.

PS800 △ 1-532-675-21 ■ LINK, IC 1.5A

PS801 △ 1-532-675-21 ■ LINK, IC 1.5A

PS802 △ 1-532-675-21 s LINK, IC 1.5A

PS803 △ 1-532-675-21 s LINK, IC 1.5A

#### AD-115A BOARD(ES-7(CE))

Ref. No.  
or Q'ty Part No. SP Description

1pc A-8273-952-A o MOUNTED CIRCUIT BOARD, AD-115A  
The mounted circuit board includes the following safety related parts.

PS800 △ 1-532-675-21 ■ LINK, IC 1.5A

PS801 △ 1-532-675-21 ■ LINK, IC 1.5A

PS802 △ 1-532-675-21 s LINK, IC 1.5A

PS803 △ 1-532-675-21 ■ LINK, IC 1.5A

#### AU-217 BOARD(ES-7(UC/J/CE))

Ref. No.  
or Q'ty Part No. SP Description

1pc A-8273-905-A o MOUNTED CIRCUIT BOARD, AU-217  
The mounted circuit board includes the following safety related parts.

F900 △ 1-532-966-11 s FUSE, 5A 125V

#### BF-54 BOARD(ES-7(UC/J/CE))

Ref. No.  
or Q'ty Part No. SP Description

1pc A-8273-916-A o MOUNTED CIRCUIT BOARD, BF-54

#### CN-1237 BOARD(ES-7(J))

## LITHIUM BATTERY

### CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.  
Dispose of used batteries according to the manufacturer's instructions.

### ADVARSEL

Lithiumbatteri - Eksplosjonsfare.  
Ved utskifting benyttes kun batteri som anbefalt av apparatfabrikanten.  
Brukt batteri returneres apparatleverandøren.

### Vorsicht!

Explosionsgefahr bei unsachgemäßem Austausch der Batterie.

Ersatz nur durch denselben oder einen vom Hersteller empfohlenen ähnlichen Typ.  
Entsorgung gebrauchter Batterien nach Angaben des Herstellers.

### VARNING

Explosionsfara vid felaktigt batteribyte.  
Använd samma batterityp eller en likvärdig typ som rekommenderas av apparattillverkaren.  
Kassera använt batteri enligt gällande föreskrifter.

### ATTENTION

Il y a danger d'explosion s'il y a remplacement incorrect de la batterie.

Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.

Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

### VAROITUS

Paristo voi räjähtää jos se on virheellisesti asennettu.

Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.

Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

### ADVARSEL!

Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering.

Udskiftning må kun ske med batteri af samme fabrikat og type.

Levér det brugte batteri tilbage til leverandøren.

### CAUTION

Use of Controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

## 2-7-8. PC Main Board Replacement/ Adjustment

Serial No : up to 10999 (For UC)  
up to 30999 (For CE)

See this section.

Serial No : 11001 and higher (For UC)  
31001 and higher (For CE)

See the ES-7 Kit-1 manual.

(Part number : 9-955-130- 01)

### [How to replace]

**Note:** In the event of failure on the PC main board, be sure to replace the board on which the parts are mounted.

- ① Remove the top panel. (Refer to section 2-6.)
- ② Disconnect the nine connectors on the PC main board.

- ③ Remove the screw (B 3 × 4) from the bracket, and then remove the VPR-18 board. Remove the VGA board and BF-54 board, ESBK-7051 or ESBK-7052 (these ESBK are the optional boards.) from the PC main board.

- ④ Remove the nine screws (BVTT 3 × 6), and then remove the PC main board.

# [JUMPER]

Confirm that jumpers are set to the following position.

3. Place the thumb and the first and second finger on the ribbed area of the tool. Maintain a small downward force to keep the tool butted on the socket.

Squeeze the thumb and finger together so that the tool legs tend to straighten. This action will draw the chip carrier out of the socket and grip it within the tool legs. Maintain the squeezing action so as to hold the chip in the tool, hold the tool over your other hand and relax the squeeze. The chip will fall out of the tool and into your hand.

#### 2-8-4. Power Supplied Cord for CE

Power Cord : 1-590-910-11

## 2-9. ERROR MESSAGES

When the system detects an error or failure in operations, settings, connections, or peripheral equipment, ■ message box appears on the monitor. The message box contains a message explaining the cause of the problem and an icon (S, I, or i) that indicates how serious it is. The message box also contains buttons such as [Yes] or [No] that allow you to respond to the message.

The following table lists system error messages, explains the function of message box buttons, and explains steps you can take to deal with the problem.

### 2-9-1. Messages Displayed With The ■ Icon

Message	Buttons/Steps to take
Are you sure that you want to revert to tape clip?	[Yes]: Revert. [No]: Do not revert.
EditStation cannot obtain VTR status. Please check selected VTR.	[OK]: Close the message box.
Insufficient memory to complete this operation.	[Abort]: Stop the process and close the message box.
Not enough memory to allocate the requested number of clips.	[Abort]: Stop the process and close the message box. Steps to take: Delete some of the clips.
One or more disk units are not formatted. It takes about ■ minutes per unit.	[Yes]: Display a format confirmation message. [No]: Stop the process.
Selected VTR is not powered on, or 9-pin cable is not connected.	[OK]: Close the message box.
The device could not be found or recognized.	[OK]: Close the message box. Steps to take: Restart all peripheral equipment.
The dynamic link library <XX> could not be found in the specified path.	[OK]: Close the message box. Steps to take: Reinstall the software.
The EditStation failed to initialize properly.	[OK]: Close the message box. Steps to take: Wait for a few seconds and then restart EditStation. The cause may be that a device driver has not completed initialization, or an old software version in the system control module. This message may be displayed if you start EditStation immediately after starting Windows NT.

(Continued)

Message	Buttons/Steps to take
The requested operation was unsuccessful. -<XX>	<p>[Abort]: Stop the process and close the message box.  [Retry]: Try the operation again.  Steps to take: Change the arrangement on the timeline and try again.</p> <p>The meanings of error codes (XX) are as follows.  Take the appropriate steps when indicated.</p> <p>3: Error occurred during preroll.  Steps to take: Check the VCRs.</p> <p>4: Error occurred during synchronization.  Steps to take: Check the sync grade.</p> <p>5: EDL too large to be processed in one pass.  Steps to take: Delete some of the data on the timeline and try again.</p> <p>6: Timecode not continuous.  Steps to take: Use continuous timecode.</p> <p>9: Color frame lock failed.</p> <p>10: No cassette memory on tape.</p> <p>11: Error occurred in cassette memory.</p> <p>12: No data in cassette memory.</p> <p>13: Transfer of data from cassette memory was halted.</p> <p>14: Undefined cassette memory type.</p> <p>15: Error occurred during execution.  Steps to take: Restart the system.</p> <p>16: Invalid timecode found.  Steps to take: Restart the system.</p> <p>17: Timeline command execution failed.  Steps to take: Restart the system.</p> <p>18: Devices not ready.  Steps to take: Power all devices off and on again.</p> <p>21: More than 100 effects on the timeline.  Steps to take: Delete one or more of the effects on the timeline and try again.</p> <p>22: No response from peripheral equipment.  Steps to take: Power  peripheral equipment off and on again.</p> <p>23: Invalid timecode settings on the timeline.  Steps to take: Reduce the amount of data on the timeline and try again.</p> <p>25: Title clips are less than 3 seconds apart.  Steps to take: Make title clips at least 3 seconds apart.</p> <p>26: Error occurred in the Disk Recorder.  Steps to take: Take either of the following steps depending on the circumstances under which the error occurred.</p> <p>1) If the error occurs when you turn on the power, check the connection between the ES-7 and the Disk Recorder.  Format the Disk Recorder if it has been formatted.</p> <p>2)  the error occurs during operation, check 1) first and then delete unnecessary clips from the Disk Recorder.</p>
There is not enough space or empty ID on the disk unit. Delete one or more clips and then try again.	[Abort]: Stop the process and close the message box.
This clip does not exist on Disk Recorder. Please upload again.	[OK]: Close the message box.

## 2-9-2. Messages Displayed With The Icon

Message	Buttons/Steps to take
Access denied. System file is in use.	[OK]: Close the message box. Steps to take: Wait for a few seconds and then restart EditStation. The cause may be that the system control module is in use. This message may be displayed if you exit EditStation and then restart it immediately.
Cannot find clip. Insert the correct tape.	[OK]: Close the message box.
Cannot set more than 2 clips.	[OK]: Stop the placement of the clips and close the message box.
Clips and tape reel name do not match. Insert the correct tape.	[OK]: Close the message box.
Confirm to clear Recycle Box. Save <XX> before clearing?	[Yes]: Clear the Recycle Box. [No]: Stop the current process.
Confirm to delete <XX> window?	[Yes]: Delete. [No]: Do not delete.
Delete clips from <XX>?	[OK]: Delete the clip data from the clip database and reel data file, and register the deletions in the project file. [Cancel]: Cancel the selection of the clips and do not delete them.
Disk Recorder is not available. You cannot use uploaded clips on project file.	[OK]: Close the message box. Steps to take: To use the Disk Recorder, restart all equipment.
Disk Recorder is not powered on, or SCSI cable is not connected.	[OK]: Close the message box. Steps to take: To use the Disk Recorder, restart all equipment.
Download not available on this configuration.	[OK]: Execute download at normal speed. [Cancel]: Do not execute the download.
EditStation cannot obtain VTR information. Try this execution from <XX> block?	[Yes]: Restarts from the failed edit. [No]: Cancels the attempted operation. Steps to take: If this message appears and the ES-7 fails to record or download when a DSR-85 is connected as the recorder, check that QSDI was not selected for video input signals when creating the master tape. If QSDI was selected for video input signals when creating the master tape, create a master tape again following the instructions given under "To create a master tape using a DSR-85/85P digital VCR" in this Notice. If QSDI was not selected for video input signals when creating the master tape, clips may have been pasted on timeline without sufficient spacing or the VCR may have failed to synchronize.
Execute ClipLink on analog video format?	[Yes]: Execute. [No]: Do not execute.
Fade In/Out is not adequate to this clip. Please set more than 11 and less than clip duration.	[OK]: Stop the process.
High-speed upload not available on this hardware configuration.	[OK]: Execute upload at normal speed. [Cancel]: Do not execute the upload.
Make sure the tape is in the VTR.	[OK]: Stop the current process. Steps to take: Insert a tape in the VCR and try again.

(Continued)

Message	Buttons/Steps to take
No recorder is found. Do you want to do a Player-Preview?	[Yes]: Execute a Player-Preview. [No]: Do not execute a preview.
Please set more than 5 frames between two effects.	[OK]: Stop the process. Steps to take: Reset the effects on the timeline.
Recorder is disabled. Are you sure you want to record?	[Yes]: Execute the recording. [No]: Do not execute the recording.
Recorder is disabled. Are you sure you want to review?	[Yes]: Execute the review. [No]: Do not execute the review.
Run Disk B-roll?	[Yes]: Run. [No]: Do not run.
There is not empty effect ID. Delete one or more effects and then try again.	[OK]: Stop the process of pasting an effect on the timeline. Steps to take: Delete one or more effects from the timeline.
This clip stretches over two executable units.	[OK]: Cancel the placement of the clip and close the message box.
This operation sets sync grade of all VTR to rough. Continue?	[Yes]: Make color frame setting. [No]: Remove the check from the check box (do not use color frame editing).
This timeline includes a clip not on Disk recorder. Change to hybrid mode? If there are any clips on S3, S4 track, they will be deleted.	[Yes]: Change to hybrid mode. [No]: Cancel the insertion.
This VTR is set Local. Please set Remote and then try again.	[OK]: Stop the current process. Steps to take: Change the VCR control mode to Remote and try again.
This VTR set recording inhibited. Make sure Rec inhibit switch is off.	[OK]: Close the message box.
Title clip cannot be set without video clips.	[OK]: Stop the placement of the clip and close the message box.
You cannot close Clipbin because it is referenced by Timeline.	[OK]: Stop the process.

### 2-9-3. Messages Displayed With The Icon

Message	Buttons/Steps to take
Cannot create clip. Set duration more than 4.	[OK]: Close the message box.
Cannot execute if you change title clip. Please replace title clip.	[OK]: Close the message box.
Cannot find key <XX> clip.	[OK]: Close the message box.
Cannot read Cassette Memory. Please try again.	[OK]: Close the message box.
Clip not found.	[OK]: Close the message box.
Disk Recorder is not ready. Please check.	[OK]: Close the message box. Steps to take: Restart  devices.
Insert audio 1/2 ch clip?	[1/2]: Insert into channels 1 and 2. [3/4]: Insert into channels  and 4. [Cancel]: Stop the process.
Inserted tape does not have Cassette Memory.	[OK]: Close the message box.
No previous clip found.	[OK]: Close the message box.
Save changes to <XX>?	[Yes]: Save the window in the project file and then close the window. [NO]: Close the window without saving  in the project file. [CANCEL]: Stop execution of the command.
Selected VTR does not have ClipLink function.	[OK]: Close the message box.
There are no clips at this position.	[OK]: Close the message box.
There are no MARK at this clip.	[OK]: Close the message box.
There are no OK status clips.	[OK]: Close the message box.
This clip cannot be inserted at this position.	[OK]: Close the message box.
This clip is on tape. Not available on disk recorder.	[OK]: Close the message box.
This effect pattern cannot be set at this position.	[OK]: Close the message box. Steps to take: Change the arrangement on the timeline.
This effect pattern cannot be set by Auto Add.	[OK]: Close the message box.
This port is in use by another device. Please check.	[OK]: Close the message box.
This MARK is out of range. Delete MARK and create clip?	[OK]: Delete the MARK data and create a clip. [Cancel]: Stop the process and do not create a clip.
You selected 2 SDI inputs. Another audio will not be output.	[OK]: Close the message box.
<XX> was changed. Please replace this title clip.	[OK]: Close the message box.

## FACTORY SERVICE MANUAL

1st Edition

---

サービス用のマニュアル

# 安全のために

設置や保守、点検、修理などを行う前に、この「安全のために」と、サービス用のマニュアルをよくお読みください。

サービス技術者へ

## 警告

ソニー製品は安全に十分に配慮して設計されています。しかし、電気製品はサービス時に間違った扱い方をすると、火災や感電などにより死亡や大けがなど人身事故につながることもあり、危険です。この「安全のために」は事故を防ぐために重要な注意事項を示しています。この「安全のために」及び別冊の取扱説明書の「△警告△注意」をよくお読みの上、安全に設置や保守、点検、修理などを行ってください。

この「安全のために」は、製品全般の注意事項が記されておりますので、この機器をサービスする時には当てはまらない内容も含まれております。

警告表示の意味

このサービス用のマニュアルおよび製品では、次のような表示をしています。表示の内容をよく理解してから本文をお読みください。

## 警告

この表示の注意事項を守らないと、火災や感電などにより死亡や大けがなど人身事故につながることがあります。

注意を促す記号

注意

火災

感電

行為を指示する記号

プラグをコンセントから抜く

強制

下記の注意を守らないと、  
火災や感電による死亡や大けがにつながることがあります。

#### 1. 感電にご注意を

- ・ 部品交換の場合は感電の危険があるので電源プラグを抜いてください。
- ・ 内部には高電圧の部分があり、通電時には感電の危険がありますので充分ご注意ください。

#### 2. 指定部品を使用する

回路図、部品表に△印で指定されている部品は安全重要部品ですので指定のものをご使用ください。

#### 3. 部品の取付けや配線の引き回しは元通りにする

- ・ チューブやテープなどの絶縁材料を使用した部品、及びプリント基板から浮かして取付けた部品を元通りにする。
- ・ 引き回しやクランパーで発熱部品、高圧部品及び可動部分に接近しないように処理したハーネスの引き回しを元通りにする。

#### 4. 電池についてのご注意

- ・ 電池は、正しく交換しないと爆発する危険があります。電池を交換する場合には必ずマニュアルで指定している電池を使用してください。
- ・ 火の中に入れてください。ショートさせたり、分解、加熱しないでください。発熱、発火、破裂の恐れがあります。
- ・ 使用済電池は、端子(金属部分)にテープを貼るなどの処理をし、指定の方法で廃棄してください。
- ・ 使用済ニカド電池はリサイクル協力店にご持参ください。

#### 5. レーザー光を直視しない

レーザー光放射による被爆を受けると、目に損傷を与える危険があります。  
光学ブロックの調整やシールドケースを外すときは、以下の注意を厳守してください。

- ・ 対レーザー光線保護眼鏡を正しく着用する。
- ・ マニュアルにしたがって作業する。
- ・ シールドケースを外したまま、機器を放置しない。
- ・ 整備作業終了後、ただちにシールドケースを正しく取り付け。

#### 6. ラックマウントした機器を2台以上同時に引き出さない。又、手や指をはさまない。

- ・ 2台以上同時に引き出すと、機器の重みでラックが転倒し、大けがの原因になります。
- ・ 一度にラックから引き出すのは1台だけにしてください。また、ラックが転倒・移動しないように適切な処置を取ってください。
- ・ ラックマウントした機器を収納するときおよび引き出すとき、手や指をはさむと、けがの原因となります。

#### 7. サービス後は安全点検を

サービスのために取り外したネジ、部品、配線がもとどおりになっているか確認してください。

またサービスした箇所の周辺の部品及び線材の損傷してしまったところがないかなどを点検してください。

- ・ 感電・漏電を防ぐために金属部と電源プラグの絶縁チェックを行ってください。

(絶縁チェックの方法)

電源コンセントから電源プラグを抜き、電源スイッチをいれます。500 V絶縁抵抗計を用いて電源プラグのそれぞれの端子と外部露出金属部との間で、絶縁抵抗値が1MΩ以上であること。この値以下の時はセットの点検修理が必要です。

## このマニュアルについて

### 本書の目的

本書は、ビデオ編集システムを構成するエディットステーション ES-7 と下記に示すオプション基板のファクトリーサービスマニュアルです。

ベーシック DME スイッチャーボード	: ESBK-7021
ベーシック DME スイッチャー用 3D エフェクトボード	: ESBK-7022
アドバンスド DME スイッチャーボード	: ESBK-7023
アドバンスド DME スイッチャー用 3D エフェクトボード	: ESBK-7024
エクスターナルスイッチャーインターフェースボード	: ESBK-7025
QSDI インターフェースボード	: ESBK-7031
SDI インターフェースボード	: ESBK-7032
ディスクレコーダーボード	: ESBK-7041
SCSI オプション	: ESBK-7051
イーサネットオプション	: ESBK-7052
ES Draw	: ESBK-7071

本システムを構成する機種について、部品レベルまでのサービスを前提とした情報 (回路図・マウント図・詳細パーツリスト等) を記載したマニュアルです。

### 構成

本書の構成を把握していただくために、全章の概略を以下に紹介します。

#### 第1章 BLOCK DIAGRAMS

各基板の機能や信号の流れを示すブロック図を掲載しています。

#### 第2章 SCHEMATIC DIAGRAMS

全プリント基板の回路図を掲載しています。

#### 第3章 BOARD LAYOUTS

全プリント基板のパターンとシンボル図を掲載しています。

#### 第4章 SEMICONDUCTOR PIN ASSIGNMENTS

使用半導体の外形および IC については概略の機能ブロックや、ピン名称を掲載しています。

#### 第5章 SPARE PARTS & OPTIONAL FIXTURES

セットの全サービス部品について記載しています。

## 関連マニュアル

本機には、この「ファクトリーサービスマニュアル」の他に下記の取扱説明書およびマニュアルが用意されています。

- ・サービスマニュアル（各製品に付属していません）

部品番号：9-977-659-01 < ES-7/ESBK-7021/ESBK-7022/ESBK-7023/ESBK-7024/  
ESBK-7025/ESBK-7031/ESBK-7032/ESBK-7041/ESBK-7051/  
ESBK-7052/ESBK-7071 >

部品番号：9-977-662-01 < ESBK-7011 >

部品番号：9-977-663-01 < ESBK-7045 >

ブロックおよび基板交換によるサービスへの対応を前提としたサービス情報を記載しています。

- ・取扱説明書（各製品に付属しています）

部品番号：3-856-429-01 < ES-7 >

部品番号：3-856-422-01 < ESBK-7011 >

部品番号：3-856-431-01 < ESBK-7021/7022/7023/7024/7025/7031/7032/7041 >

部品番号：3-858-088-01 < ESBK-7045 >

部品番号：3-856-427-01 < ESBK-7051 >

部品番号：3-858-273-01 < ESBK-7052 >

部品番号：3-856-854-01 < ESBK-7071 >

部品番号：3-856-430-01 < RMM-ES7 >

部品番号：3-858-087-01 < RMM-ES701 >

各製品を実際に運用および操作するのに必要な情報を記載しています。

- ・ES Draw オペレーションマニュアル ESBK-7092J  
（ESBK-7071 に付属していません）

ES Draw ESBK-7071 の詳しい操作方法を記載しています。

- ・オンラインマニュアル（ES-7 に付属する CD-ROM ディスクに収録）  
およびエディットステーションユーザーガイド ESBK-7091J  
（ES-7 に付属していません）

エディットステーションユーザーガイド ESBK-7091J は CD-ROM ディスクに収録されているオンラインマニュアルを印刷したガイドです。

エディットステーション ES-7 の詳しい操作方法を記載しています。

取扱説明書には記載されていない編集操作の詳細や細かい設定について記載しています。

## MANUAL STRUCTURE

### Purpose of This Manual

This manual is the Factory Service Manual of the Edit Station ES-7 and the following option boards.

Basic DME switcher board	: ESBK-7021
3D effect board for basic DME switcher	: ESBK-7022
Advanced DME switcher board	: ESBK-7023
3D effect board for advanced DME switcher	: ESBK-7024
External switcher interface board	: ESBK-7025
QSDI interface board	: ESBK-7031
SDI interface board	: ESBK-7032
Disk recorder board	: ESBK-7041
SCSI option	: ESBK-7051
Ethernet option	: ESBK-7052
ES Draw	: ESBK-7071

This manual describes the information (board layouts, schematic diagrams and detailed parts list) and covers information on parts.

### Contents

The sections covered in the manual are summarized below to give you a general understanding of the manual.

#### SECTION 1. BLOCK DIAGRAMS

Illustrates the block diagrams which show each board function and signal flow.

#### SECTION 2. SCHEMATIC DIAGRAMS

Shows the schematic diagrams of all the circuit boards.

#### SECTION 3. BOARD LAYOUTS

Shows the board layouts of all the circuit boards.

#### SECTION 4. SEMICONDUCTOR PIN ASSIGNMENTS

Shows the external dimensions of the semiconductors used, and describes outlines of the function blocks and pin names of the ICs.

#### SECTION 5. SPARE PARTS & OPTIONAL FIXTURES

Describes the electrical parts list, packing materials & supplied accessories and optional fixtures.

## Related Manuals

In addition to this Factory Service Manual, the following operating instructions and manuals are provided.

- **Service Manual (Not supplied with each equipment)**

Part No. 9-977-660-01 <ES-7/ESBK-7021/ESBK-7022/ESBK-7023/ESBK-7024/  
ESBK-7025/ESBK-7031/ESBK-7032/ESBK-7041/  
ESBK-7051/ESBK-7052/ESBK-7071>

Part No. 9-977-662-01 <ESBK-7011>

Part No. 9-977-663-01 <ESBK-7045>

Describes the servicing information for blocks and boards replacements of the equipment.

- **Operating Instructions (Supplied with each equipment)**

Part No. 3-856-429-11 <ES-7 English>

Part No. 3-856-429-21 <ES-7 French>

Part No. 3-856-429-31 <ES-7 German>

Part No. 3-856-422-01 <ESBK-7011 English/French/German>

Part No. 3-856-431-01 <ESBK-7021/7022/7023/7024/7025/7031/7032/7041  
English/French/German>

Part No. 3-858-088-01 <ESBK-7045 English/French/German>

Part No. 3-856-427-01 <ESBK-7051 English/French/German>

Part No. 3-858-273-01 <ESBK-7052 English/French/German>

Part No. 3-856-854-01 <ESBK-7071 English/French/German>

Part No. 3-856-430-01 <RMM-ES7 English/French/German>

Part No. 3-858-087-01 <RMM-ES701 English/French/German>

Describes the information for the application and operation of each equipment.

- **ES Draw Operation Manual ESBK-7092E (Not supplied with ESBK-7071)**

Describes the detailed information about how to use ESDraw ESBK-7071.

- **Online Manual (Supplied on CD-ROM) and Operation Manual ESBK-7091E (Not supplied with ES-7)**

The Operation Manual ESBK-7091E is a printed version of a CD-ROM disc that contains an online manual.

Describes the detailed instructions about how to operate the Edit Station and the details of operation and installation which are not covered in the Operation Instructions.

## SECTION 4

### SEMICONDUCTOR PIN ASSIGNMENTS

ここに記載されている半導体は、それぞれの機能を等価的に表したものです。なお、互換性のない型名を併記していることがありますので、部品を交換するときは、Spare Partsの章を参照してください。

等価回路は I C メーカーのデータブックに従いました。

Semiconductors of which functions are equivalent are described here. For parts replacement, refer to the section of Spare Parts in this manual. The circuit diagram of each IC is obtained from the IC data book published by the manufacturer.

**C-MOS SYNC GENERATOR**  
**(TOP VIEW)-**

[illegible]

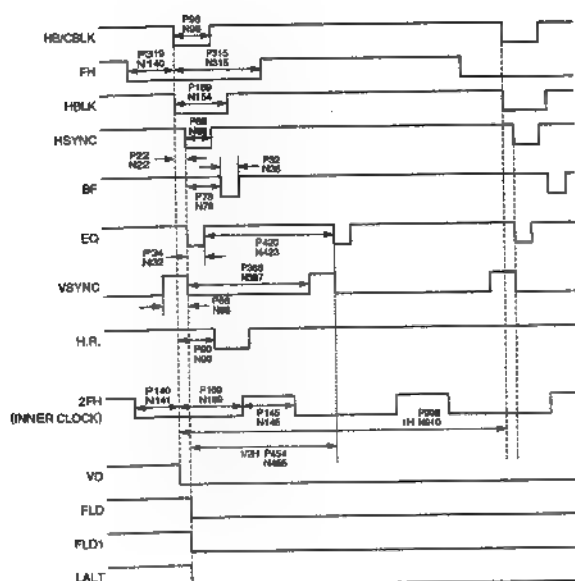

The diagram shows the following signals and their timing characteristics:

- SYNC OUT**: Composite sync signal.
- BF/COLB OUT (PAL)**: Burst frequency/colour burst signal. Duration:  $10\mu$ .
- LALT OUT (PAL)**: Line alternating signal.
- BF/COLB OUT (SECAM)**: Burst frequency/colour burst signal. Duration:  $6.5H$ .
- HD OUT**: Horizontal sync signal. Duration:  $28H$ .
- BLK OUT**: Black level signal. Duration:  $28H$ .
- OVD**: Overdrive signal. Duration:  $7.5H$ .
- FLD OUT**: Field signal. Duration:  $2.5H$ .
- FLD1 OUT (PAL)**: Field 1 signal. Duration:  $2.5H$ .
- FLD1 OUT (SECAM)**: Field 1 signal. Duration:  $2.5H$ .
- 480c IN (PAL)**: 480-line input signal.
- SC OUT**: Serial clock output signal.

**INPUT**

- BPV : EXT/INT CLOCK SELECT
- ICVR : ESTABLISHES MAXIMUM AMPLITUDE VALUE FOR OCIO (PIN 27)
- IGAC : V CORRELATION CIRCUIT ON/OFF (Y/C SEPARATION MODE)
- IGBE : SINGLE WAVE DETECTION ON/OFF (Y/C SEPARATION MODE)
- IGC1 : V CORRELATION CIRCUIT SELECT
- IGC2 : CHROMA FLAT SECTION HORIZONTAL FILTER SELECT (Y/C SEPARATION MODE)
- IGCK : EXTERNAL CLOCK
- IGD0 : DROPOUT CORRECTION
- IGH1 : FLAT SECTION HORIZONTAL FILTER SELECT (Y/C SEPARATION MODE)
- IGH : SLEW MODE SET
- IGL1 - IGL3 : LIMITER LEVEL ADJUST FOR Y SIGNAL COMB FILTER
- IGNP : NTSC/PAL FORMAT SELECT
- IGOC : OUTPUT ENABLE
- IGPC : VDD CONTROL
- IGPF : TEST
- IGRC : PLL SUBCARRIER
- IGRP : DELAY LINE LENGTH ADJUST
- IGRV : Y/C SEPARATION AND PLAYBACK MODE SELECT
- IGW1 - IGW5 : Y COMB FILTER DEPTH ADJUST
- IGY1, IGY2 : EDGE SECTION HORIZONTAL FILTER SELECT (Y/C SEPARATION MODE)
- IGZP : 1-BIT DELAY CIRCUIT
- IGZV : VCR HEAD SWITCHING
- ICY1 - ICY8 : VIDEO SIGNAL
- IYVR : ESTABLISHES MAXIMUM AMPLITUDE VALUE FOR OYIO (PIN 38)

**OUTPUT**

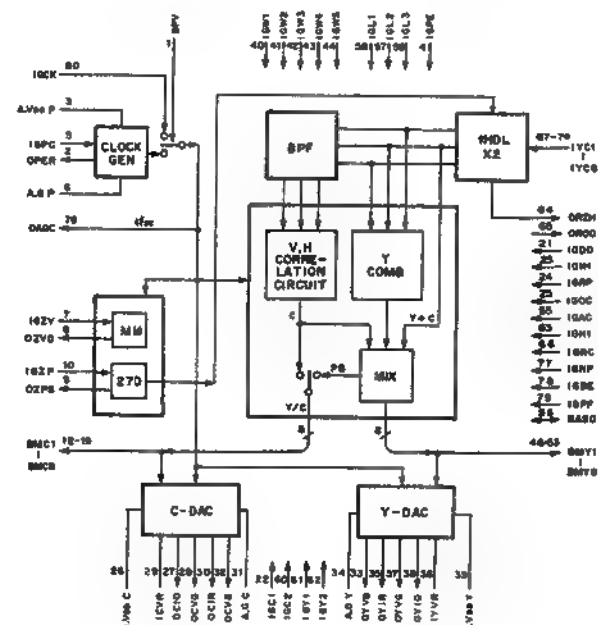

- OADC : CLOCK
- OCIO : CHROMA ANALOG SIGNAL
- OCIR : CONNECT A RESISTOR 16x LARGER THAN THE RESISTOR AT OCO (PIN 27)
- OCVB : CONNECT TO DIGITAL GND WHICH HAS A CAPACITANCE OF UP TO 0.1  $\mu$ F
- OCVS : CONNECT TO AN ANALOG POWER SUPPLY WHICH HAS A CAPACITANCE OF UP TO 0.1  $\mu$ F
- OPER : PLL ERROR
- ORZO : "0" IS DETECTED AT ALL INPUTS
- ORZH : 1-BIT DELAY CIRCUIT
- OYIO : Y ANALOG SIGNAL
- OYIR : CONNECT A RESISTOR 16x LARGER THAN THE RESISTOR AT OYIO (PIN 38)
- OYVB : CONNECT TO DIGITAL GND WHICH HAS A CAPACITANCE OF UP TO 0.1  $\mu$ F
- OYVG : CONNECT TO AN ANALOG POWER SUPPLY WHICH HAS A CAPACITANCE OF UP TO 0.1  $\mu$ F
- OZPS : 1-BIT DELAY CIRCUIT
- OZVD : VSYNC PERIOD MASK

**INPUT/OUTPUT**

- BASO : EDGE DETECTION LEVEL SELECT (Y/C SEPARATION MODE)
- BMC1 - BMC8 : CHROMA DIGITAL SIGNAL
- BMV1 - BMV8 : Y DIGITAL SIGNAL

**OTHER**

- A.G C : ANALOG GND FOR CHROMA D/A
- A.G P : ANALOG GND FOR VDD
- A.G Y : ANALOG GND FOR Y D/A
- A.VDD C : ANALOG POWER SUPPLY FOR CHROMA D/A
- A.VDD P : ANALOG POWER SUPPLY FOR VDD
- A.VDD Y : ANALOG POWER SUPPLY FOR Y D/A
- D.G : DIGITAL GND
- D.VDD : POWER SUPPLY FOR DIGITAL

## C-MOS PIXEL DATA CONTROL -TOP VIEW-

### INPUT

BA0 - BA7	B PIXEL DATA
BB0 - BB7	B PIXEL DATA
CLR	INTERNAL REGISTER CLEAR
CS	CHIP SELECT
DCLK	PIXEL CLOCK (13.5 MHz)
HP0	VRAM SERIAL CLOCK PHASE SETTING
KA0 - KA7	K PIXEL DATA
KB0 - KB7	K PIXEL DATA
KORD	VO READ SIGNAL
KOWR	VO WRITE SIGNAL
LDA	ADDRESS LOAD SIGNAL
PCLK	VO CLOCK (33.3 MHz)
RA0 - RA7	R PIXEL DATA
RB0 - RB7	R PIXEL DATA
RST	RESET
TEST2	HIGH = TEST MODE/LOW = NORMAL
UPA	ADDRESS UP SIGNAL
VFLD	EXTERNAL FLID
VHD	EXTERNAL HD
VVD	EXTERNAL VD
YA0 - YA7	Y PIXEL DATA
YB0 - YB7	Y PIXEL DATA

### OUTPUT

B0 - B7	B PIXEL DATA
COUNT LD	DISPLAY ADDRESS STROBE SIGNAL
COUNT UP	DISPLAY ADDRESS UP SIGNAL
CSYNC	CHROMINANCE SYNC
FLD	FIELD
HACTIVE	AREA (HORIZONTAL)
HLBK	HORIZONTAL BLANKING
HSYNC	HORIZONTAL SYNC
K0 - K7	K PIXEL DATA
KVBLK	KEY BLANKING
MODE0, MODE1	MODE SELECT
R0 - R7	R PIXEL DATA
SA00 - SA16	SRAM ADDRESS
SCBLK	SCRAM BLANKING
SCLK	VRAM SERIAL CLOCK
SOE0, SOE1	SRAM OUTPUT ENABLE (SOE0 = BC, RC SIDE/SOE1 = YC, KC SIDE)
SWE0, SWE1	SRAM WRITE ENABLE (SWE0 = BC, RC SIDE/SWE1 = YC, KC SIDE)
VACTIVE	AREA (VERTICAL)
VBLK	VERTICAL BLANKING
VSYNC	VERTICAL SYNC
Y0 - Y7	Y PIXEL DATA

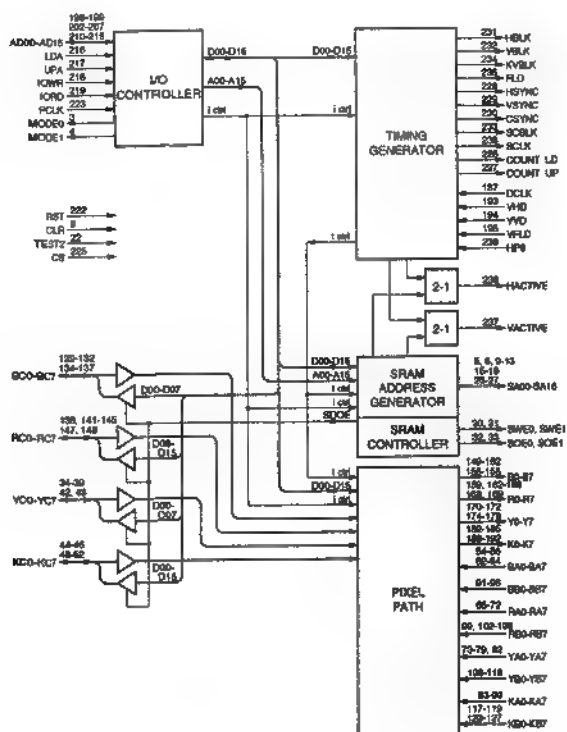

(VDD = +5V)

### INPUT

BCKI	: REFERENCE BIT CLOCK (84/32Fs)
BCKPOL	: POLARITY SWITCHING SIGNAL OF BCKI (PIN NO.60) AND RXBCK (PIN NO.58)
CLKIN	: MASTER CLOCK OSCILLATOR INPUT AT DIGITAL PLL
CPU AUTO	: SELECTS CPU INTERFACE OR AUTO INTERFACE
CS	: "CH": AUTO INTERFACE, "L": CPU INTERFACE
DTMODE0-3	: CHIP SELECT SIGNAL (INPUT FOR CHANNEL STATUS REGISTER) ("L": SELECT)
LRCLK	: OUTPUT FORMAT SPECIFYING CODE OF RDATA SIGNAL (PIN NO.68)
LRPOL	: REFERENCE LR CLOCK INPUT (Fs PERIOD)
MUTE0, 1	: POLARITY SWITCHING SIGNAL OF LRCLK (PIN NO.63) AND RXLR (PIN NO.62)
MUTEON	: RDATA (PIN NO.58) MUTE PERIOD SETTING CODE
PLLSEL	: "L": AUDIO OUTPUT BE FORCIBLY MUTE ON FOR A CERTAIN PERIOD
RXDATA	: "L": ANALOG PLL, "H": DIGITAL PLL
TST1	: AES/EBU INPUT
TST3	: TEST INPUT (NORMALLY FIXED TO "L")
TST3	: TEST PIN (FIXED TO "L")

### OUTPUT

CLKOUT	: MASTER CLOCK OSCILLATOR OUTPUT AT DIGITAL PLL
COUT	: C BIT STATUS SIGNAL EXTRACTED FROM AES/EBU INPUT SIGNAL
CRCA, CRCB	: OUTPUTS THE RESULT OF CHANNEL STATUS CRC CHECK OF SUBFRAME A AND B AT ERROR OCCURRING

### CSAVLDITY, CSBVDITY

D0 E1A	: SUBFRAME A CHANNEL STATUS (CPU AUTO: "H")
D1 E2A	: SUBFRAME A CHANNEL STATUS (CPU AUTO: "H")
D2 E0B	: SUBFRAME B CHANNEL STATUS (CPU AUTO: "H")
D3 E1B	: SUBFRAME B CHANNEL STATUS (CPU AUTO: "H")
D4 E2B	: SUBFRAME B CHANNEL STATUS (CPU AUTO: "H")
D5 MON	: SUBFRAME A CHANNEL STATUS (CPU AUTO: "H")
D6 LN0	: SUBFRAME A/B CHANNEL STATUS (CPU AUTO: "H")
D7 LN1	: SUBFRAME A/B CHANNEL STATUS (CPU AUTO: "H")
ERROR	: ERROR INFORMATION OUTPUT (PARITY, SLIP ERROR, etc.) IN SERIAL
FMASTER	: MASTER CLOCK OUTPUT
INT	: INTERRUPTION SIGNAL OUTPUT
NOSGNL	: NO SIGNAL DETECTION
PE1	: PARITY ERROR DETECTION OUTPUT (1 SUBFRAME)
PE3	: PARITY ERROR DETECTION OUTPUT (3 SUBFRAMES CONTINUOUSLY)
PLLREF	: RDATA SYNC DETECTION
PLLVAR	: ANALOG PLL MASTER CLOCK 1/256 (2Fs) SIGNAL
RDATA	: AES/EBU INPUT SIGNAL DEMODULATED SIGNAL OUTPUT
RXBCK	: BIT CLOCK OUTPUT GENERATED FROM AES/EBU INPUT SIGNAL
RXBLKID	: BLOCK ID SIGNAL
RXLRL	: REFERENCE LR CLOCK OUTPUT (Fs PERIOD)
SLIP0, SLIP1	: DATA SLIP DETECTION
SYNERR	: SYNC ERROR DETECTION OUTPUT
UNLOCK	: DIGITAL PLL UNLOCK DETECTION OUTPUT
UOUT	: U BIT (USER DATA BIT) STATUS SIGNAL EXTRACTED FROM RDATA SIGNAL
VE1A	: VALIDITY ERROR DETECTION OUTPUT (ONE SUBFRAME A)
VE1B	: VALIDITY ERROR DETECTION OUTPUT (ONE SUBFRAME B)
VE3A	: VALIDITY ERROR DETECTION OUTPUT (3 FRAMES CONTINUOUSLY FOR SUBFRAME A)
VE3B	: VALIDITY ERROR DETECTION OUTPUT (3 FRAMES CONTINUOUSLY FOR SUBFRAME B)
VOUT	: V BIT (VALIDITY BIT) STATUS SIGNAL EXTRACTED FROM RDATA SIGNAL

### INPUT/OUTPUT

AD0 CON	: CHANNEL STATUS (CPU AUTO: "H")
AD1 NOA	: CHANNEL STATUS (CPU AUTO: "H")
AD2 FS0	: CHANNEL STATUS (CPU AUTO: "H")
AD3 FS1	: CHANNEL STATUS (CPU AUTO: "H")
AD4 FS2	: CHANNEL STATUS (CPU AUTO: "H")
AD5 E0A	: SUBFRAME A CHANNEL STATUS (CPU AUTO: "H")
F128 TS2	: OUTPUTS 128Fs OF DIGITAL PLL
FIXDPILLZ	: PLLSEL: "H"
	: DIGITAL PLL OPERATION MODE SELECTION SIGNAL ("H": NARROW MODE, "L": WIDE MODE)
FM12 TS4	: 1/2 MCK OUTPUT
LOCKPH0-5	: PLLSEL: "H", FIXDPILLZ: "H" OPERATION PERIOD SETTING DATA INPUT AT NARROW MODE (DIGITAL PLL MODE)
RD LN2	: SUBFRAME A/B CHANNEL STATUS (CPU AUTO: "H")

I : INPUT WITH PULL-UP REGISTER  
D : INPUT WITH PULL-DOWN REGISTER  
OT : TRI-STATE OUTPUT

**INPUT (WITH PULL-DOWN REGISTER)**  
128CK : DIGITAL AUDIO 128 x Fs CLOCK  
AD1/2 : DIGITAL AUDIO CH-1/2 DATA  
AD3/4 : DIGITAL AUDIO CH-3/4 DATA  
BCK : DIGITAL AUDIO BIT CLOCK (Fs x 64)  
C1/2 : DIGITAL AUDIO CH-1/2 CHANNEL STATUS  
C3/4 : DIGITAL AUDIO CH-3/4 CHANNEL STATUS  
OEAX0 : OUTPUT ENABLE FOR AUX0-9 (L)  
U1/2 : DIGITAL AUDIO CH-1/2 USER DATA BIT  
U3/4 : DIGITAL AUDIO CH-3/4 USER DATA BIT  
V1/2 : DIGITAL AUDIO CH-1/2 VALIDITY FLAG  
V3/4 : DIGITAL AUDIO CH-3/4 VALIDITY FLAG  
VCK : VIDEO CLOCK (Fs x 64) INPUT  
Z1/2 : DIGITAL AUDIO CH-1/2 BLOCK SYNC (Z-FLAG)  
Z3/4 : DIGITAL AUDIO CH-3/4 BLOCK SYNC (Z-FLAG)

**INPUT (WITH PULL-UP REGISTER)**  
Z0/16 : DIGITAL AUDIO 20BIT/16BIT SELECT  
AFS : DIGITAL AUDIO FORMAT SELECT  
CHEX0, 1 : CHANNEL EXCHANGE 0, 1  
CHS1-CHS4 : AUDIO CH1-CH4 OUTPUT SELECT (L)  
CER : POWER ON CLEAR (L)  
CWA0-CWA3 : CHANNEL STATUS REGISTER WRITE ADDRESS 0-3  
CWCK : CHANNEL STATUS REGISTER WRITE CLOCK  
CWD0-CWD7 : CHANNEL STATUS REGISTER WRITE DATA 0-7  
CWEN : CHANNEL STATUS REGISTER WRITE ENABLE  
DID0, 1 : VIDEO FORMAT D2/D1 SELECT  
DID0, 1 : DATA ID BIT0, 1  
DIR : DIGITAL AUDIO MSB FIRST/LSB FIRST SELECT  
DLY0-DLY4 : DELAY CONTROL BIT0-BIT5  
IT1-IT5 : TEST (L)  
LMA0, 1 : LINE MODE 0, 1  
LACK : DIGITAL AUDIO L/R CLOCK (Fs)  
LRS : DIGITAL AUDIO LEFT/RIGHT BIT POSITION SELECT  
SYNC : VIDEO SYNC INPUT  
ZCS : DIGITAL AUDIO Z-FLAG C-BIT SELECT

**OUTPUT**  
ADBT : AUX DATA BLOCK TIMING  
ADFT : AUX DATA FLAG TIMING  
AUXT : AUX DATA TIMING  
OT1-OT19 : TEST  
UDT : USER DATA TIMING

**OUTPUT (TRI-STATE)**  
AUX0-AUX9 : AUX DATA 0-9

**INPUT**

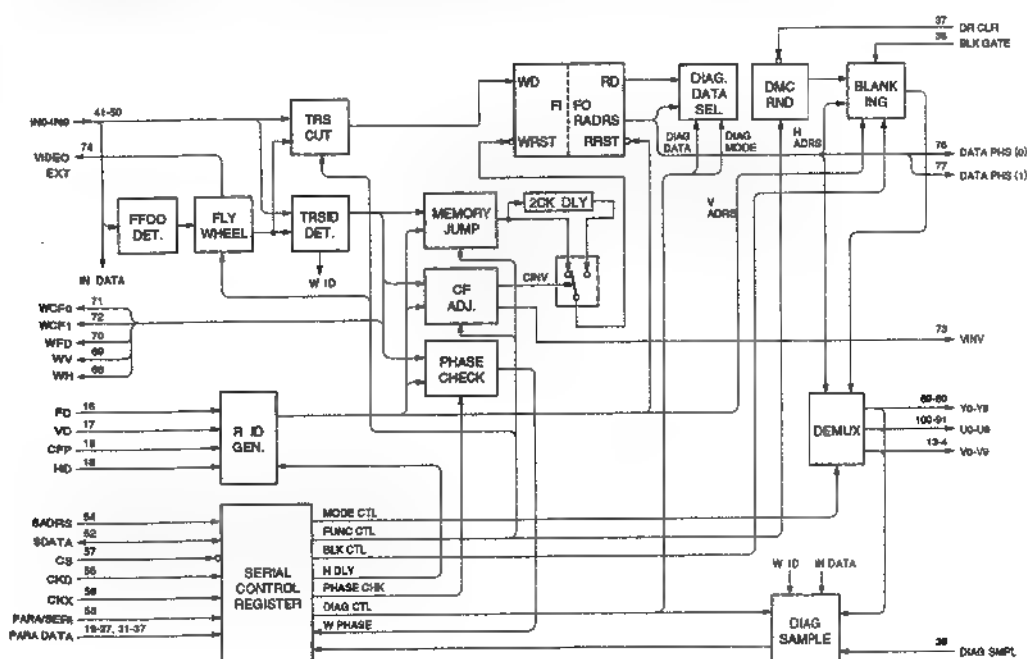

- S2S / 625 : 625 / 625 SELECT (CONTROL REGISTER PARALLEL DATA)
- BLK GATE : BLANKING SIGNAL
- BLK MODE (0-2) : BLANKING MODE (0-2) (CONTROL REGISTER PARALLEL DATA)
- CFP : SYSTEM CFP (COLOR FRAME PULSE)
- CKD : CONTROL REGISTER SERIAL CLOCK
- CS : CONTROL REGISTER OPERATION TIMING
- D1 / D2 : D1 / D2 SELECT (CONTROL REGISTER PARALLEL DATA)
- DBLK / ABLK : DIGITAL / ANALOG BLANKING SELECT (CONTROL REGISTER PARALLEL DATA)
- DEMUX MODE (0-1) : DEMULTIPLEX MODE (0-1) (CONTROL REGISTER PARALLEL DATA)
- DIAG MODE (0-1) : SELF DIAGNOSIS MODE (0-1) (CONTROL REGISTER PARALLEL DATA)
- DIAGSMPL : SELF DIAGNOSIS SAMPLE PULSE
- DRCLR : DYNAMIC ROUNDING RESET
- DR ON : DYNAMIC ROUNDING ON/OFF (CONTROL REGISTER PARALLEL DATA)
- FD : SYSTEM FD
- FW CTL : FLYWHEEL ON / OFF (CONTROL REGISTER PARALLEL DATA)
- HD : SYSTEM HD
- HSFTAT : AUTO COLOR MATCH (CONTROL REGISTER PARALLEL DATA)
- HSFTFC : FORCED 2CLK DELAY OF TRS (CONTROL REGISTER PARALLEL DATA)
- IN (0-9) : VIDEO SIGNAL (0-9)
- MJ CTL : MEMORY JUMP ON/OFF (CONTROL REGISTER PARALLEL DATA)
- PARA / SERI : PARALLEL SERIAL SELECT
- RCK : FIFO READ CLOCK
- SADDRS : CONTROL REGISTER SIGNAL ADDRESS
- TRIS CUT : TRIS CANCELLATION (CONTROL REGISTER PARALLEL DATA)
- V BLK FIX : FIXED V BLANKING (CONTROL REGISTER PARALLEL DATA)
- VD : SYSTEM VD
- WCK : FIFO WRITE CLOCK

**OUTPUT**

- DATA PHS (0-1) : VIDEO PHASE INFORMATION (0-1)
- T OUT : TEST OUT (SET OPEN)
- VIDEO EXT : VIDEO CHECK FLAG
- V INVERT (0-1) : V INVERT (0-1)
- WCF (0-1) : DETECTED CF (0-1)
- WFD : DETECTED FD
- WH : DETECTED HD
- WRST : FIFO RESET PULSE
- WV : DETECTED VD

**INPUT/OUTPUT**

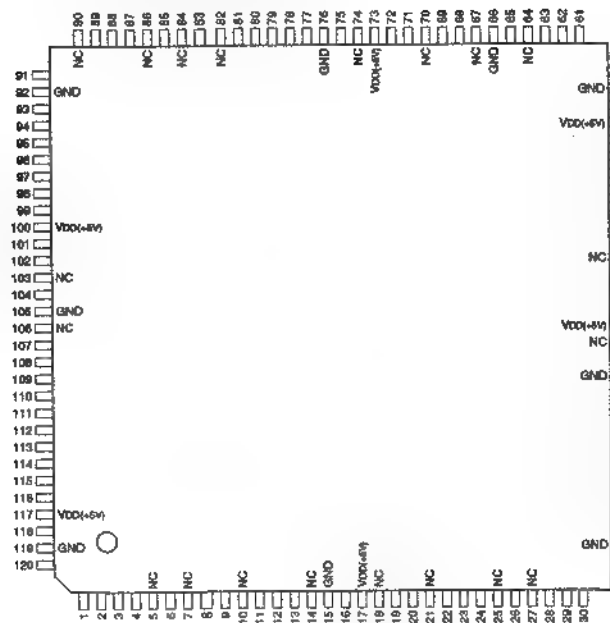

- SDATA : CONTROL REGISTER SERIAL DATA

## SECTION 5

### SPARE PARTS AND OPTIONAL FIXTURES

#### 5-1. NOTES ON SPARE PARTS

##### (1) Safety Related Components Warning

Components identified by shading marked with  $\Delta$  on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose parts numbers appear as shown in this manual or in service manual supplements published by Sony.

##### (2) Standardization of Parts

Replace Parts that are supplied from Sony Parts Center can sometimes have different shape and external appearance than what are actually used in equipment. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts."

##### (3) Stocked of Parts

The parts marked with "S" in the SP column of the exploded views and electrical spare parts list are normally required for routine service work. Orders for parts marked with "O" will be proceed, but allow for additional delivery time.

##### (4) Units of Capacitors, Inductors, and Resistors

The following units are omitted in the schematic diagrams exploded views, and electrical part lists unless otherwise specified;

Capacitor :  $\mu\text{F}$

Inductor :  $\mu\text{H}$

Resistor : W

#### 5-1. 補修用部品注意事項

##### (1) 安全重要部品

回路図、分解図、電気部品表中、 $\Delta$ 印の部品は安全性を維持するために重要な部品です。従って、これらの部品を交換するには必ず指定の部品と交換して下さい。

##### (2) 部品の共通化

ソニーから供給される部品はセットに実装されているものと異なることがあります。これは部品の共通化、改良等によるものです。分解図や電気部品表中には現時点での共通化された部品が記載されています。

##### (3) 部品在庫

SP (Supply code) 欄が"O"で示されている部品は交換頻度が低い部品であるので在庫しないことがあり、納期が長くなることがあります。

##### (4) コンデンサ、インダクタ、抵抗の単位

回路図、分解図、電気部品表中、特に明記したものを除き、下記の単位は省略されています。

コンデンサ :  $\mu\text{F}$

インダクタ :  $\mu\text{H}$

抵抗 : W

## FACTORY SERVICE MANUAL

---

### 追加版 -2

この追加版-2を、お持ちのマニュアルに追加および差し替えてご使用下さい。

### 対応マニュアル

1st Edition (9-977-661-01)

詳細は次ページ参照

### SUPPLEMENT-2

Please add and replace your manual with this SUPPLEMENT-2

### Applicable Manual

1st Edition (9-977-661-01)

Refer to next page for details.

## 内容

- 目次
- SECTION 1 BLOCK DIAGRAMS
- SECTION 2 SCHEMATIC DIAGRAMS
- SECTION 3 BOARD LAYOUTS
- SECTION 5 SPARE PARTS & OPTIONAL FIXTURES

次のページを差し替えてご使用ください

- 第1章 1-1, 1-2, 1-27, 1-28  
第2章 2-169, 170, 187, 188  
第3章 3-33～3-36  
第5章 5-3～5-6, 5-105 以降

## SUBJECT

- TABLE OF CONTENTS
- SECTION 1 BLOCK DIAGRAMS
- SECTION 2 SCHEMATIC DIAGRAMS
- SECTION 3 BOARD LAYOUTS
- SECTION 5 SPARE PARTS & OPTIONAL FIXTURES

**Replace the following pages.**

- SECTION 1 1-1, 1-2, 1-27, 1-28  
SECTION 2 2-169, 170, 187, 188  
SECTION 3 3-33 through 3-36  
SECTION 5 5-3 through 5-6, 5-105 and higher

### 安全重要部品

#### △警告

△印のついた部品は安全性を維持するために重要な部品です。したがって、交換する時は必ず指定の部品を使ってください。

### Safety Related Components Warning

Components marked  $\Delta$  are critical to safe operation. Therefore, specified parts should be used in the case of replacement.

### SAFETY CHECK-OUT

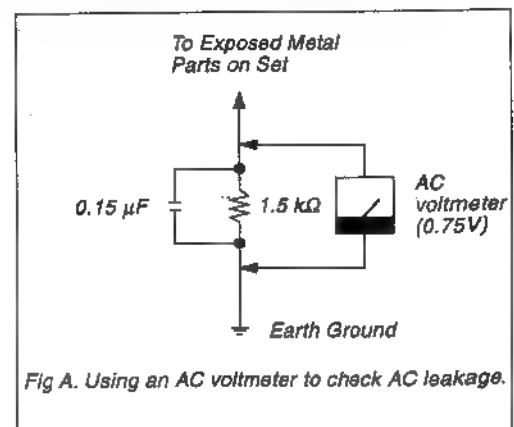

After correcting the original service problem, perform the following safety checks before releasing the set to the customer :

Check the metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

### LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA. Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

#### CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.  
Dispose of used batteries according to the manufacturer's instructions.

#### ADVARSEL

Lithiumbatteri - Eksplosjonsfare.  
Ved utskifting benyttes kun batteri som anbefalt av apparatfabrikanten.  
Brukt batteri returneres apparatleverandøren.

#### Vorsicht!

Explosionsgefahr bei unsachgemäßem Austausch der Batterie.

Ersatz nur durch denselben oder einen vom Hersteller empfohlenen ähnlichen Typ.  
Entsorgung gebrauchter Batterien nach Angaben des Herstellers.

#### VARNING

Explosionsfara vid felaktigt batteribyte.  
Använd samma batterityp eller en likvärdig typ som rekommenderas av apparattillverkaren.  
Kassera använt batteri enligt gällande föreskrifter.

#### ATTENTION

Il y a danger d'explosion s'il y a remplacement incorrect de la batterie.

Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.

Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

#### VAROITUS

Paristo voi räjähtää jos se on virheellisesti asennettu.  
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.  
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

#### ADVARSELI

Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering.

Udskiftning må kun ske med batteri af samme fabrikat og type.  
Levér det brugte batteri tilbage til leverandøren.

#### CAUTION

Use of Controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

CLASS 1 LASER PRODUCT  
LASER KLASSE 1  
LUOKAN 1 LASERLAITE  
KLASS 1 LASERAPPARAT

This ES-7 is classified as a CLASS 1 LASER PRODUCT.  
The CLASS 1 LASER PRODUCT label is located on the rear panel.

No.	Parts No.	SP	Description
101	A-8273-914-A	o	MOUNTED CIRCUIT BOARD, VPR-18
102	A-8273-915-A	o	MOUNTED CIRCUIT BOARD, DSC-75 (For J, UC)
103	A-8273-916-A	o	MOUNTED CIRCUIT BOARD, BF-54
104	A-8273-937-A	o	MOUNTED CIRCUIT BOARD, CN-1242
105	A-8273-944-A	o	MOUNTED CIRCUIT BOARD, DSC-75A (For CE)
106	△1-251-506-11	s	INLET (WITH FILTER) (For J, UC)
107	△1-251-507-11	s	INLET (WITH FILTER) (For CE)
108	△1-533-570-11	s	BREAKER, CIRCUIT (For J, UC)
109	△1-533-630-11	s	BREAKER, CIRCUIT (For CE)
110	*1 1-589-861-11	■	BOARD, PC, MAIN
110	*2 1-761-019-11	s	BOARD, PC, MAIN
111	1-589-888-11	o	BOARD, VGA
112	*1 1-698-827-11	s	FAN, D. C. (WITH HEAT SINK)
112	*2 1-763-027-11	s	FAN, D. C. (WITH HEAT SINK)
113	1-774-966-11	o	CONNECTOR, BNC (RECEPTACLE)
114	1-777-296-11	o	CABLE (WITH CONNECTOR) (25P)
115	1-777-297-11	o	CABLE (WITH CONNECTOR) (9P)
116	1-956-406-11	o	HARNESS, SUB (FAN)
117	3-603-451-02	o	PANEL, REAR
118	3-603-463-01	o	PLATE (2), PC CN
119	3-718-661-01	o	SUPPORT, TC
